2. Make Thousands of Dollars easily!!!! Not Spam Not Scam!!

Newsgroup: rec.radio.cb
Date: 2005-06-01 03:30:26 UTC

Source record: 200889

READING THIS COULD CHANGE YOUR LIFE! IT DOES WORK!

I found this on a bulletin board and decided to try it. A little while back, I was browsing through newsgroups, just like you are now and came across an article similar to this that said you could make thousands of dollars within weeks with only an initial investment of $6.00! So I thought, 'Yeah right, this must be a scam', but like most of us, I was curious, so I kept reading. Anyway, it said that you send $1.00 to each of the 6 names and address stated in the article. You then place your own name and address in the bottom of the list at #6, and post the article in at least 200 newsgroups. There are thousands! No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured: 'what have I got to lose except 6 stamps and $6.00, right?' Then I invested the measly $6.00. Well GUESS WHAT!?... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in.

In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing. This is now my fourth week and I have made a total of just over $42,000.00 and it's still coming in rapidly. It's certainly worth $6.00, and 6 stamps, I have spent more than that on the lottery!! Let me tell you how this works and most importantly, WHY it works... Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it.

I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so easy!

Suggestion: Read this entire message carefully! (print it out or download it.) Follow the simple directions and watch the money come in!

It's easy. It's legal. And, your investment is only $6.00 (Plus postage).

IMPORTANT: This is not a rip-off; it is not indecent; it is not illegal; and it is 99% no risk - it really works!

If all of the following instructions are adhered to, you will receive extraordinary dividends.

PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be yours in 20 to 60 days. This program remains successful because of the honesty and integrity of the participants. Please continue its success

by carefully adhering to the instructions.

You will now become part of the Mail Order business. In this business your product is not solid and tangible, it's a service. You are in the business of developing Mailing Lists. Many large corporations are happy to pay big bucks for quality lists. However, the money made from the mailing lists is secondary to the income which is made from people like you and me asking to be included in that list.

Here are the 4 easy steps to success:

STEP 1: Get 6 separate pieces of paper and write the following on each piece of paper 'PLEASE PUT ME ON YOUR MAILING LIST.' Now get 6 US $1.00 bills and place ONE inside EACH of the 6 pieces of paper so the bill will not be seen through the envelope (to prevent thievery). Next, place one paper in each of the 6 envelopes and seal them. You should now have 6 sealed envelopes, each with a piece of paper stating the above phrase, your name and address, and a $1.00 bill. What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL! You are requesting a legitimate service and you are paying for it! Like most of us I was a little skeptical and a little worried about the legal aspects of it all. So I checked it out with the U.S. Post Office (1-800-725-2161) and they confirmed that it is indeed legal. Mail the 6 envelopes to the following addresses:

#1) E. Haynes
3629 Edgar St.
Hannibal, MO 63401

#2) M. Molina
807 Siesta Loop
Robstown, TX 78380

#3) T. Linkous
115 Lee St.
Greenville, NC 27858

#4) E.H. Johnson
P.O.Box 409
Clearlake Oaks, CA 95423

#5) L. Johnson
5700 Ridge Club Loop, #302
Orlando, FL 32839

#6)J. Wine
4502 Jouster Ct, #203
Orlando, FL 32817

STEP 2: Now take the #1 name off the list that you see above, move the other names up (6 becomes 5, 5 becomes 4, etc...) and add YOUR Name as number 6 on the list.

STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 24,000 groups) All you need is 200, but remember, the more you post, the more money you make! You won't get very much unless you post like crazy. :)

This is perfectly legal! If you have any doubts, refer to Title 18 Sec. 1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions. Look at it this way. If you are of integrity, the program will continue and the money that so many others have received will come your way.

NOTE: You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you.This VERIFIES that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)

So, as each post is downloaded and the directions carefully followed, six members will be reimbursed for their participation as a List Developer with one dollar each. Your name will move up the list geometrically so that when your name reaches the #1 position you will be receiving thousands of dollars in CASH!!! What an opportunity for only $6.00 ($1.00 for each of the first six people listed above) Send it now, add your own name to the list and you're in business!

---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS----------

Step 1) You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the entire letter into the computer's memory.

Step 2) Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy of the letter into notepad so that you can add your name to the list.

Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go back to.

Step 4) Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions.)

Step 5) Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this will be the header that

everyone sees as they scroll through the list of postings in a particular group, click the post message button. You're done with your first one! Congratulations...THAT'S IT! All you have to do is jump to different newsgroups and post away, after you get the hang of it, it will take about 30 seconds for each newsgroup! **REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE! BUT :YOU HAVE TO POST A MINIMUM OF 200** That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount of mail you will receive. If you wish to stay anonymous, you can invent a name to use, as long as the postman will deliver it. **JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.**

Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at #5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at #4 and only 5 replies each, I will bring in an additional $125.00! Now, those 125 persons turn around and post the MINIMUM 200 with my name at #3 and only receive 5 replies each, I will make an additional $625.00! OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at #2 and they each only receive 5 replies, that just made me $3,125.00!!! Those 3,125 persons will all deliver this message to 200 newsgroups with my name at #1 and if still 5 persons per 200 newsgroups react I will receive $15,625,00! With an original investment of only $6.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $6.00 to names on the list, putting your name at number 6 again. And start posting again.

The thing to remember is: do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!! So, can you afford $6.00 and see if it really works?? I think so... People have said, 'what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet. Remember, play FAIRLY and HONESTLY and this will really work.

3. Big trouble in mopathetic's lying wristflipperland!

Hey mopathetic, why didn't you camp at Dayton, cowardboi? You made all
those threats and stuff and then wimped out. All we wanted to do was
introduce ourselves. Oops, I forgot...the knife slipped during
circumcision and got your balls, too.

Who cares what you think of my posts?

If you think people will think your opinion matters about posts then show some balls and say what you think of mopathetic's sock puppets, lies, and forges. You sit right there slurping it up, so don't hand me crap about posts. Utter hypocrisy on your part.

What kind of person goes around snapping photos over an internet dustup in the first place? A stupid, insecure, and sick one.

Your pal mopathetic can't do anything about the AKC...that's why he does this. He is flailing for a way to stop us, but he has never found one yet. The sissy ass wouldn't even meet us at Dayton.

As a ham, an EXTRA to boot...you should look at keyclownism for the bag of puke it is.

Dave Hall Said:
"Actually Hitler gained his power after Paul Von Hindenburg died in
1934. Before that Hitler was just a chancellor and had been unable to
beat Hindenburg in the last election. So in many ways, fate was
responsible for Hilter's chance at power. "

Wrongo. Hitler's "emergency" powers were granted by Hindenburg in 1933
as a response to the Reichstag fire.

The German parliment building was torched and the Nazi's blamed
communist agitators, said that the country needed stronger leadership
to beat off attempts by the communists to take it over, etc.

Actually, the Nazis themselves did the torching, specifically to
agitate public opinion in favor of Nazi policies by blaming
anti-government forces for the deed.

Hitler said that Germany was being threatened, the people saw the
Reichstag fire as proof. Hindenburg gave in and let the Nazis run the
show.

Hitler would have blown a goat at the Berlin Zoo to get that power...a
little arson was definitely only the beginning if he had not gotten it.

How to get a BIG, russian made (made like a dern battleship!),
Linear--cheap!...
1) Go to the shipping port closest to you.
2) Find a Russian crewman who can speak english.
4) Negotiate with him.
5)
      a) either have him bring a linear back to port next
sail.
      b) have him put you in contact with a russian company.
6) Pick up you linear and have at it.
.. if you wish to purchase a linear from another country--simply choose
the appropriate ship at the port...
Don't be afraid to modify the above steps to suit your purpose(s)....
I won't even mention what can be done at a private airport...
Warmest regards,
John

Scott) On Sat, 28 May 2005 13:06:44 -0400, alexb wrote: I would take what he said about call sign usage with a grain of salt. It's no different than somebody telling you it's OK to do 20 over on the highway because they never saw a cop. Yeah you might get away with it for a long time, but sooner or later you'll get nailed.

_
Leland is confused. Contrary to what he claimed, sooner or later people do NOT get nailed for such actions. Listen to the cb, channel 6 or any other channel where dx is rampant. A quick peep into the records of the FCC busts reveals the way things really are. Leland likes to cite the exception and -not-the norm of how the feds operate. Even if you were to get the attention of the feds and get "nailed", you must be served with a warning notice alerting you to the violation and an order to cease the illegal activity, as Leland's examples cite. In fact, most cited are guilty of repeat offenses after receiving multiple warnings. The chances of getting busted are slim to slimmer unless someone complains. Even then, the feds must actually witness any violation before any action other than a warning notice is issued.

>You do not understand.

>Everything you said is formally correct.

.which would illustrate I understand just fine.

>On a practical level a great degree of

>tolerance exists in such matters.

Actually, practicality has nothing to do with it..,,it's reality.

>I got it even before I posted here.

Got what?

>The issue for me was to learn the amplitude of
>trouble a person can get in, potentially, under

>extreme circumstances.

Since you didn't ask anything of the sort in your post, it's interesting to note how Leland just read your mind. Wow. You two have a serious bond.

>The license costs just $80.00 which is next to

>nothing for me. It is much better for me to pay

>80 bucks and forget about the matter

>otherwise in some extreme circumstances

>somebody, not necessarily the Feds, can point
>their finger at me and say: BTW, he operates

>a RADIO TRANSMITTER without a license or

>in some illegal way.

If someone other than the feds "point a finger at you" , it means
nothing.

>This is the point.

Not in your original post it wasn't. In fact, that wasn't your point
until Leland needed corrected. Even if it was your point, you would have
nothing to worry about, as your decision was already made to get a
license. Enjoy.

I have a suggestion: Forget the swamps. Tramp your way around the
Pacific NW instead. Start in Coeur D'Alene and take a riverboat ride
up the St. Joe and play a couple rounds of golf on the floating green.
If you leave early then you can get to Spokane in time for Hoopfest
(http://www.hoopfest.org/). Then head West and catch a concert at the
Gorge Amphitheatre. Move on to Puget Sound for some awesome fishing,
spend the next day on a drive up the Olympic Mountains (something you
can never imagine until you see them firsthand), head back for a day
browsing on the piers including the Old Curiosity Shop where they have
a couple mummies and lots of other oddities. Eat at the rotating
restaurant on the Space Needle and see a great view of the most
dangerous volcano in the US (Mt. Rainier), visit a couple excellent
breweries, etc. When you get bored with the big city just head South
on I-5 for some small-town life in the Willamette Valley, like the
Timber Carnival (lumberjack stuff like tree-topping, log-throwing,
etc), and chill at the evening concerts in Monteith Park in Albany
where you can hear some big names in Jazz.

Of course if you like hot swamps and alligators that's fine, too.

Is that a keyclown radio specially made for them to make contacts so
they can meet and be gay together?

sorry, mopathetic, you can't change the truth no matter how often you try. You made threats regarding what you were gonna do at the Dayton Hamfest to AKC'ers. You said you would be camping and bringing a posse to deal with us. You didn't camp, you didn't bring a posse.

You hid from the AKC when we asked to meet you.

You are the coward, goat slurper.

Ha! I just noticed fuglys handle in your quote. We camped, ate like pigs
(ribs)and steak, had half a pickup truck load of firewood burning. It was
fun only because I was with two good buddys...a nerd festival otherwise.
The used gear wasn't as good as I'd hoped either.

All in all a waste.

Some of the freeband gang been having at it with yet another repeater on the Penna/NY line. When they first launched it, there were some technical audio issues, but they seem to have straightened them out since then. This repeater appears to be among the new "roving" repeaters the clubs are moving from place to place in order to avoid detection. Enraged hammies, send your foaming-at-the-mouth complaints to the FCC flunky field agent in Texas. Tell 'em I sent ya' for good measure!

"Fuck the FCC! Fuck 'em!"..Al Lewis (Grandpa Munster)

Some of the largest bass come from the swamps. Gators won't bother ya'
and the bugs are only out in the summer. Biggest problem here is also
the largest draw,,,the heat. But check it out in the fall, winter and
spring..there aren't many finer places to live.

I'll tell ya' what really sends the yankees back with a great taste of
Florida...it's the swamp trips, not the open water. It's not all dismal
swamps,,,,it's freshwater springs with water more pure than what you get
out of your tap and underwater caverns and labrynths to explore, (see
Devil's Den) it's the all-you-can-carry fossils one finds floating down
the Peace River, it's the secret swimming holes (newly found or little
known springs) in the middle of a swamp or edge of a river, the
largemouth bass that are mostly upward of 5 pounds, it's swimming in the
springs or a river when the baby manatee comes up to play with you or
swim with you, and momma (sometimes larger than a volkswagon) decides to
brush against you and make sure you're friendly,,,,,,,,and you can't
forget your first "bump" by an alligator in a tight area. Oh yea,,and
the sunsets...Florida just found they have 4 out of 10 of the best rated
beaches in the world..and two of those are within thirty minutes of me.

Yeah, but it's fun talking about it. Most people think there's nothing
up here but a bunch of trees and it rains all the time.

No one had asked previously. But since you have now, the percentage of
married people (Which included both spouse present and absent) is
about 53.5% from the same spreadsheet that you can't seem to read and
gather information from.

They refer to it by different names. Names like "living wage", "fair
share", "universal care". But it basically means the same thing.
Taking money from people who earn it, to give to people who don't.

>
>What percent of people are married, Dave?

See above. And before you jump the gun and say "Aha! if 53.4% of
people are married, that means that 46.4% are divorced, that's almost
half!", you need to consider that an additional 6.2% are widowed, 2.1%
are separated, and 28.6% have never been married.

It's all there in the spreadsheet. Don't tell me you too have webTV
and can't read a simple spreadsheet?

That's hard to quantify, for years before accurate data was routinely
taken. Your only guessing at that point. There's only so much you can
see in ice cores and soil layers. Most of what you see there is
suggestive, but not conclusive.

>>When the apparent variation in the sun's energy output is taken into

Tree ring growth can be affected by a number of factors, besides solar
output. Without accounting for and removing those other variables, a
true tracking of solar output cannot be accurately ascertained.

>>>be -less- biased, which makes -you- naive.
>>
>>That statement makes absolutely no logical sense.
>
>
>Only because you are incapable of thinking logically.

That's not logic. It's convolution.

What one country's news service bias is, has absolutely no bearing on
what another country's bias is. There is no connection or relation
whatsoever. Their bias depends on the agenda of those who are pulling
the financial or political purse strings and who sits in the editor's/
publisher's office.

>> Where is the logic
>>that supports your claim that a foreign news service bias is in any
>>way connected to domestic news services?
>

>
>
>Absolutely. Any news service is subject to bias simply because must
>decide if any given article is newsworthy. US news services are biased
>because of corporate ownership influences and target audience
>demographics.

Not to mention the liberal slant of the reporters and writers who are
producing the articles. If corporate ownership had as much influence
as you imply, then the slant of U.S. news would be decidedly
conservative. Yet, with the notable exception of (Thank God for) Fox
News, that is not the case.

I suggest that you pick up copies of the books "Bias" and "Arrogance"
by Bernard Goldberg. Both are good reads into the liberal slant of the
mainstream media. Goldberg was a 28 year veteran of CBS news, and has
an insider's view on what actually goes on inside the "art" of news
reporting.

> IOW, the Dutch are far less concerned with American news
>than Americans, so an independent Dutch news agency is going to have
>far less bias than any US news service, NPR included.

That may or may not be true depending on their bias toward or against
Americans. If they have a decidedly anti-American slant, they would
tend to only report on those news stories that paint America in an
unfavorable light.

>> I suppose
>>you would find Al-Jazeera to be the bastion of objectivity?
>
>
>I don't think Jim claimed to get his news from Al-Jazeera.

No he didn't. But would you consider Al Jazeera's reporting of
Americans to be objective? Why or why not? Then explain why any of
those factors would be exclusive only to Al Jazeera.

>>>>>Care is not a "simile" for "disagree". When you figure that out, you may

I don't nitpick on grammatical mistakes. Only people who start losing debates on the merits of debate itself, resort to attacking grammar, structure or spelling errors. If you can't attack the message, attack the messenger as it were.

>>>>Your word games and semantic shuffle will not allow you to wiggle out

>After 10 years of posting I'm sure I could find more than a few in the
>archives.

Doubtful. Most are either thankful for my advice, or at least debate with it on a civil level. I miss the days when Dennis O, Sean, Bill E., Toll and others offered up their own perspectives with respect to CB radio. Only the rapid malcontents have any consistent issue with me.

>> If you want to talk about politics, there are

>>conservatives are pretty much even with the liberals.
>
>
>You must be cross-posting to an alternative universe because that's
>not what comes up on my newsreader.

Then you need to look harder. Most of the liberals there cannot think independently. They offer up op-ed column of obviously biased reporters as some sort of "support" for their opinions. But liberalism defies logic, and that's what especially laughable about you Frank. You, who claim to embrace logic, yet adopt a political ideology that's mostly "pie in the sky" idealism. A philosophy that requires a great deal of complicated governmental intervention to implement. The free market capitalist society is one of true freedom. Those who work hard, get rewarded. Those who don't..... Well they have no one else to blame but themselves for what they end up with.

>> The
>>conservatives mount far better logical arguments. The liberals there

Your still wrong Frank.

But your nature dictates that you will continue to attack me. But like trying to find firm footing in quicksand, your arguments will be just as ineffective.

That is why arguing politics is usually pointless.

That's just it. At the federal level, very little of what happens
directly benefits me (Unless we're talking about tax cuts). I
understand that I'm just one voice, and that my congressperson has no
obligation to consider my needs before those of thousands of other
people. To that end, I vote for people who share my "core values" and
political ideology. In that way, I can be reasonably sure they won't
do anything to seriously piss me off.

>Wrong. The majority of -voters- choose.

When you lose a debate, you nitpick semantics. The majority of voters pick the winner. Those who are too indifferent or apathetic to vote deserve what they get handed. Voting is a civic duty. People like to scream about "rights" but they're curiously silent when it comes to responsibilities. What ever happened to JFK's famous: "Ask not what your country can do for you, ask what you can do for your country"?

> And the person they choose is
>not the "winner", as if being a public official was some sort of

It is a prize of sorts. It affirms the will of the majority of the voters that their candidate will best represent what the majority feels is important.

> It's not. It's a job. And their job is to work in the best
>interests of -ALL- their constituents, not just those that voted them
>into office.

Ah, that naive idealism shows through again. You like to think of how things SHOULD be. I, however, live in the real world. Those winning candidates know all too well, who the people responsible for their being there are, and will support their ideals and needs first and foremost. That's the way it's always been.

>And just for your information, your right to vote is granted by the
>state, not guaranteed by the Constitution.

Then you'd have no problem if states started revoking certain people's right to vote? After all, you're a staunch supporter of the letter of the Constitution and consider it the be all and end all of everything this country is.

> There have been many
>efforts to add a Constitutional amendment that would guarantee every
>citizen the right to vote, but each attempt has been blocked by the
>Republicans.

I don't suppose you'd care to post the facts supporting that conjecture?

>That's just another tidbit you never hear about from the
>"left-wing liberally biased news media".

Maybe because it isn't true......

>>> You have the right to
>>>think freely, to speak your opinions openly, to exercise religion as

It's about time, and far to late if you ask me.

>>Your "rights" are limited, to some extent, by the government.
>
>
>Of course rights have some limitations because there are circumstances
>where exercising those rights can infringe on the rights of others.

Exactly! And what constitutes those "circumstances" is largely
determined by the majority of society.

>How does gay marriage infringe on -your- rights, Dave?

It's not a matter of rights per se, it's a matter of preserving a
sacred tradition. I suppose that could be viewed as a right.

>> Some of
>>your "rights" are really privileges (try to drive a car without a
>>license).
>
>
>The lack of a driver's license doesn't prevent you from travelling

Even if they hate his guts. Bitter sweet if I may say so......

>Any president has to realize that he must weigh
>the needs of all the people of this country and not beholden to his
>party.

Any political party owes their constituents first, and others
secondarily. If the majority of voters suddenly decide that they want
liberals redefining the constitution, declaring that gay marriage is
ok, but religious expression in public is not, dispensing of aspirin
in public schools requires parental consent (Mostly to absolve
liability), but dispensing a condom or providing abortion services is
fine without parental consent, and all sort of other nonsensical
ideological trends is what they want, then they can vote for those who
support it. Right now the majority of people, who care enough about
such issues, has decreed that that is not the way they want the
country to head.

>That is where the partizen politics have degraded in this
>country over the past 40 yrs.

Well both sides are to blame for that. Neither side wants to risk
political defeat in order to achieve compromise. There is also a great
amount of ideological passion on both sides. Both sides believe
strongly in "their" ideals, and believe equally that the other side is
horribly wrong for the future of the country.

>against them.

And what happened?

>Fourth we have a Constitution to protect the Rights of the Minority
>and not the Rights of the Majority. The Majority never needs
>protection.

No, because the majority makes the rules. It's fine that the rights of the minority are considered but it makes no logical sense that the needs of that minority outweighs the needs of the majority.

No matter what decision you make politically, someone will not like it. A good politician is one who learns to piss off the least amount of people.

>Fifth I don't ask that everything that I want to be enacted. I do
>waccept the rule of the majority. I do expect the majority to hear the
>voice of the minority and compromise.

That's fair as long as the majority is not expected to abandon its
core ideological values.

Hi folks,

Sorry to be a pest. I recently placed an FS ad in here for some stuff to get rid of regarding CB. A few people wrote me and I replied. I've yet to hear back from them, serious as they seemed. While they could have changed their mind and that is ok... I am a bit puzzled as a friend of mine hasn't been receiving my replies either. "Some" of my e-mails and seemingly "all" my posts are going through ok, but other e-mails are not. I'm not sure what is going on there. I don't want anyone to think I didn't reply to their e-mails for info. I would have replied even if to tell them the stuff had already been sold if in fact it had been.

IF the folks reading this did happen to write me... check your e-mail for my reply or try writng me again. The e-mail is clfurent@yahoo.com . As I explained in my ad, this is the address I use rather than having my personal in box bombarded with anymore spam.

Thanks for your patience in this issue,

Lou

(Second since I vote, I have the right to complain whether you like it
or not.)

>Yes you do. But you have to come to terms

>with the fact that a larger number of people

>disagree with you.

Disagreeing viewpoints aren't a problem for the majority..it's people
like you that mistakenly feel those who hold views contrary to your own
are somehow of the minority. It's people like you that are unable to
come to terms with the fact that those large number of people who
disagree with you need not conform to what you feel is appropriate.

>The majority makes the rules. It's fine that the

>rights of the minority are considered but it

>makes no logical sense that the needs of that

>minority outweighs the needs of the majority.

It doesn't matter which group. When rights are being taken away or
infringed upon, the needs you speak of far outweigh any perceived
majority. You come across as "majority is always right" when it has been
illustrated and accepted the majority has been wrong, especially with
this administration. Recently, a meeting with Greenspan regarding the
Bush administration's way-off predictions concerning the economy went
something like this: Greenspan: "We certainly were wrong on those
figures. We were all wrong."
Hillary Clinton: "Just for the record, we weren't -all- wrong with our
predicted calculations. "
Of course, slavery was accepted by the majority, also. One shouldn't
have to provide countless examples of how "majority" does not equate
morality in any manner, yet you continue to confuse the two.

>That's fair as long as the majority is not

>expected to abandon its core ideological

>values.

It goes both ways. You illustrate perfectly the current political
majority is not only rabid, but has zero tolerance toward any view other
than their own. Like the Bush admin prostitutes religion, you do the
same thing with morals, invoking -your- values as the litmus test and
justification to sit in judgement of others.

 My wife and I are thinking about taking a trip to Fla. And maybe
doing some fishing. Any suggestions?
-
Anywhere in the pile in particular? What time of year you coming?
Freshwater or saltwater? Offshore or inshore? Deep sea, sport, food or
gamefishing? Plan it right and you can fill your belly, mount on your
wall and get pictures for bragging.
-
No where in particular in mind, still in the planning and idea stage.
Saltwater, a ways off shore.. But not a big game fish, something that
will keep you busy catching them even if they are ones you toss back..
Probably around September, watched a couple of shows about "bone fish"
They are an inland fish, right?
-
Mostly shallow water, yea. The Keys or Islamorda is where you want to go
for Bonefish, although in September you will need to make reservations
ahead of time no matter where you go in Florida. World record Bonefish
records were set in the last couple of years...three in Biscayne Bay and
a mess of other records were set in around the waters of Islamorda.
Problem with Bonefishing in September is your best hours are just about
over by the time the sun comes up,,,the heat is your enemy. April and
May are prime months for Bonefishing. If all you want is plenty of
action and the species don't matter, make sure to mention that when you
book your reservation. Most day trips are 4, 6 or 8 hours. Of course,
you can always charter or rent your own boat and gear for the day.

I agree with you. Funny though.. people bitch because of the FA ads, they
ask why no one sells in news groups anymore. When people do, no one buys.
They got tunnel vision thinking E-Bay will keep them from getting ripped
off. There is no clear cut way that can happen. E-Bay doesn't give a shit

one way or the other, once they've got their money. It is a proven fact. Whoopee, they let you post bad feedback. Lot of good it does when you're out your hard earned cash.

Anyway, I had a few replies and for some goofy reason, I can post to news groups, "some" of my e-mails are geting through, some aren't. So, they may not have received my replies. I just didn't want anyone to think I was ignoring them. Can't sell if you don't reply!!!!!
I didn't want to go E-Bay, but alas - it looks like I'll have to. Oh well......

Thanks for your input.

Lou (not Franklin)

68. Magnum 257 adjustment details?

Newsgroup: rec.radio.cb
Date: 2005-06-02 22:18:07 UTC
From: Ken <cprstn54zz@att.net>

Source record: 200905

I have seen on the mod pages some information on adjusting two power levels for the Magnum 257. Is there anything more comprehensive?

Magnum says I need a 14.1V (mobile) supply to get rated power. I would like to get rated power with a 13.6V supply. Instead of 30 watts, I am seeing 20 watts.

Far from it. Some of the best Trout & Salmon fishing
in the lower 48 is up your way. Also some of the best
off roading is up there too, along with the high desert &
tree's & rain.

I wish that all of them would get the heck back
to 14.313 and 75 Meters. There ain't been a
really funny ham radio freq since RH busted up
the original 14.313 and 3.894.5 some Years ago.

Ham radio needs a DEDICATED HF COMEDY CHANNEL
on 20 and 75 Meters once again, to provide us all (ham and SWL
alike) with some good quality LIVE ENTERTAINMENT once again.

Heck...some of the keyclowns in rec.radio.amateur.policy would make
for great on-the-air personalities and "Dayton Celebrities" just like ole
Herbie, Porkbutt, Polly and the rest of em were Years ago if they'd
just get off Usenet and back on live radio once again!

Shoot, I can recall when Herb showed up at Dayton one year with
a few of the other Original 14.313 Clowns and hams were actually
lining up to get his autograph (!!). Now that's Ham Celebrity Status!

How about it boys? The stage is empty and you're just a PTT switch away
from ham radio stardom, unless you want to sit here and whack-off
to usenet postings like a couple of nerds !!

This is not a minority/majority issue, Dave. Civil rights apply to
each and every individual. If the majority makes a decision that
affects those civil rights then it affects everyone -including- the
majority. And last time I checked, the word 'all' encompasses the
ultimate majority. But the people do have a choice. If they want to
prohibit gay marriage based on their religious beliefs then they must
be willing to give up their freedom of religion.

So are -you- prepared to sacrifice -your- freedom to practice -your-
religion in order to preserve this "sacred tradition"?

>suggestive, but not conclusive.

No, it's not hard to quantify. Carbon dioxide is not the only product
of wood combustion. The gasses contain various quantities of carbon
monoxide and unburnt hydrocarbons, as well as tars, acids, aldehydes,
ketones, and other chemicals that make good preservatives for meat and
add such a unique flavor to a BBQ. And that's just what goes into the
air; the residue left on the ground is wood ash, and that ash can not
only be easily identified but actually analyzed to determine what type
of wood was burned. We also know how much carbon dioxide and ash is
produced from the burning of a given quantity of any specific type of
wood, the average number and size of naturally occuring forest fires
each year, the extent those fires will burn if left unchecked, the

amount of growth that typically occurs before fire takes it's toll,
the areas and climates that are more likely to have fires, how much
vegetation survives a fire, how much vegetation actually -depends-
upon fire for regeneration, the rate of reforestation after a fire,
etc, etc.

In comparison, volcanos spew very few and very specific gasses, which
are usually compounds of sulphur, not carbon. Volcanic ash is actually
a mineral that's easily identified. And contrary to your statement of
professed ignorance on this topic, the effect of a volcanic eruption
has a climatic impact that is totally -opposite- to the effect of
greenhouse gasses -- the global temperature actually -drops- after an
eruption because the ash suspended in the atmosphere reflects sunlight
away from the surface.

I obviously know more about the subject than you, and there are
scientists that study this stuff professionally and know gobs more
than I will ever learn. You are the only one guessing, Dave.

>>>When the apparent variation in the sun's energy output is taken into

>true tracking of solar output cannot be accurately ascertained.

You're barking up the wrong tree once again, Dave; it was the study of
tree ring growth that led to the discovery of the climatic effects of
the 11/22 year sunspot cycles.

>things.

Yet you want me and others to believe your claims. Well then, if your
proof consists of your paycheck then post a scan of your pay stub, or
a picture of your house and boat, or any other circumstantial evidence
that supports your claim. Of course you won't -- you will just come up
with more excuses. So why the secrecy, Dave? I graduated EWU and I'm
proud of it. I have no problem telling anyone where I went to school,
and for two very good reasons: First, anyone can verify that I both
attended and graduated from EWU. Second, every school is prevented by
law from releasing any personal information beyond the fact that a
student attended and graduated. IOW, you have no reason to withhold
the name of your school -- unless, of course, you lied.

>smallest exception to those rules, in a vain effort to try to disprove
>the majority case. Talk about desperation.... Is your ego that
>shallow?

It was more fun watching you play semantics upon the disclosure of
facts that contradicted your claim. You do indeed "provide what is
necessary" to support your conclusions; but you withhold any facts
that don't. For example, you are withholding the names of those
engineers that disagree with me; you are withholding the name of your
"tech school"; you are withholding the specific nature of your
"engineering" career; and you withheld the section of law that
contradicted your claim about speeding laws in PA.

>>>>>.... No one is perfect. If the best you

>things SHOULD be. I, however, live in the real world. Those winning
>candidates know all too well, who the people responsible for their
>being there are, and will support their ideals and needs first and
>foremost. That's the way it's always been.

You are absolutely correct. They know all too well that they were voted into office by Americans -- citizens of a country where the law of the land is the Constitution of the United States. And -THAT- is their number one priority because the Constitution is the number one priority of each and every citizen. At least it's the first priority of any citizen that exercises any rights that are protected by it. If it were intended to be otherwise we wouldn't have elections by secret ballot.

>>And just for your information, your right to vote is granted by the
>>state, not guaranteed by the Constitution.
>
>Then you'd have no problem if states started revoking certain people's
>right to vote? After all, you're a staunch supporter of the letter of
>the Constitution and consider it the be all and end all of everything

Of course I would have a problem with it, just like I have a problem with the current system of electing a president with an electoral college. Do you have any problem with a Constitutional amendment that guarantees every citizen the right to vote?

>> There have been many
>>efforts to add a Constitutional amendment that would guarantee every
>>citizen the right to vote, but each attempt has been blocked by the
>>Republicans.
>
>I don't suppose you'd care to post the facts supporting that
>conjecture?

Not really -- facts don't carry much weight where your opinions are concerned. If you really want the facts you can find them yourself, just like you have been able to do with every other topic. And just like every other topic you will probably refuse to dig for the facts for yourself. But if you really want to suprise me, you can start by learning something about HJR 28.

>>That's just another tidbit you never hear about from the
>>"left-wing liberally biased news media".
>
>Maybe because it isn't true......

How do you think Bush wormed his way into the White House? Because the Supreme Court affirmed that the right to vote is not guaranteed by the Constitution (Bush vs. Gore). Or do you think that the Supreme Court Justices are just a bunch of "activist judges", or that their decision was written by some "skilled left wing propagandist"?

>>freedoms that are guaranteed by the Constitution.
>
>You might if enough people decide that an amendment is warranted. And
>we're back to majority rule.

But it's far from a simple majority. An amendment proposal must pass
Congress by a 2/3 majority, and -then- it must pass the States by a
3/4 majority. But even before you call that 'majority rule', know
this: Since 1787 there have been well over 2000 proposed amendments to
the Constitution, and the Bill of Rights has survived unscathed for
almost as long -- if you really think that the 1st Amendment is going
to be repealed just because a few homophobic "Christians" don't like
the idea of gays getting married then.... well, even -you- can't be
-that- stupid. Or am I wrong?

>>>>The USA is NOT a democracy

Another excellent book you should read: "The Golden Bough" by James
George Frazer. I think it should be required reading for any sociology
class.

> I am for preserving proven
>tradition

It's not the responsibility of the government to "preserve tradition"
no matter how much you would like the government to shoulder that
repsponsibility for you.

> and do not believe that change is automatically a good
>thing.

Neither do I. But change, good or bad, -is- inevitable (or haven't you
looked up the word yet?).

> I am also a political conservative (As are you IIRC), and tend
>to favor smaller government, personal responsibility and
>accountability, a free market

I agree 100%.

> and a strong morality based system of
>law and order in order to punish those who cannot act properly in a
>civilized society.

The only problem I have with that is your source of "morality". The
First Amendment prohibits any law that favors any specific religion,
therefore religion cannot be the source of morality. Thus, society
must define the lines of morality. If the majority of society derive
their moral values from religion that's fine -- but remember that the
framers of this country were mostly Christians, yet felt it was a
moral imperative to protect the freedom of everyone to practice their
own religious faith, -and- to protect the government from imposing
religion by law. Now if you had a sociological foundation for your
argument against gay marriage I might even agree, but you don't. And
since society is constantly changing (as it inevitably does), morality

will change, and so will the laws based on morality.

But what you -still- don't seem to accept is that -you- are not forced to change your religion based upon changes in society -- that's your Constitutional right. You may not like those changes, but as you have stated many times before, the government can't make everyone happy.

>The arguments between Frank, Twisty and I are much more complex than a >simple ideological disagreement. Twisty is twisty. His actions need no >further explanation. Frank has been stung ever since I admitted that I >supported Bush. A revelation that seems to have affected him >personally. Frank has since been trying to prove that support of Bush >(and republicans in general) is wrong based solely on his subjective >opinion that only an idiot would support him so, consequently, he has >been since trying to prove that I'm that idiot.

You have that a little mixed up, Dave. You -are- an idiot, but that's beside the point; I don't care if you support Bush or not -- but your reasons for supporting him are based on ignorance, propaganda, and flat-out lies, many of which you perpetrate yourself just because you don't like being proved wrong. And I don't care if you are Republican or Democrat since both parties are just about equally corrupt, as I have stated on more than one occasion (and you evidently -still- can't (or won't) understand). So if you are going to tell the story then tell the -correct- story, not just your biased version of it.

> But during the course
>of the ensuing "debates", Frank has revealed much about his >personality, and has given me an insight into his own inner demons. I >can now see why he and Twisty have found common ground. They both have >a profound distrust of corporations and any form of "the >establishment". And, if their level of knowledge and education is as >they claim, they are both underachievers. Frank, who once claimed to >teach college courses, and claims to hold a BS degree in engineering, >working as a bartender. Twisty, who claims to be well versed in law, >and an "accomplished" writer, takes snowbirds out to fish on a charter >boat, and can't even afford a real computer. No wonder he hides behind >an anonymous pseudonym.

Twisty and I have common ground now only because I was forced to admit that he was right regarding Bush. Beyond that, we still have strong ideological differences. In fact, I'd be willing to bet that the differences between Twisty and myself are greater than the differences between you and me. If you can just get past your presumptive nature and think for yourself instead of taking the temporally lazy route by relying on those that prey on emotional weaknesses then we probably wouldn't have any arguments at all. One of these days you may realize that the mental effort you use to defend your ignorance is far greater than if you spent your time and energy digging for subjective facts and forming your own -independent- opinions. Or maybe not.

>It had been fun from a purely psychological standpoint. But I am
>beginning to tire of this almost constant off-topic banter. I am
>actually longing for the days when we talked about amplifiers and mods
>to radios. I never guessed that a simple ideological disagreement
>would turn into several years worth of trash talking.

You can't help yourself. You hate to be proved wrong because it shatters your self-image as a morally-motivated person (it's that "perception-window" thing I mentioned earlier -- and the offer for -that- book still stands, too). When faced with the truth that your motivations are generally selfish (and frequently prejudicial), it creates emotional conflict with what you have chosen as your "core beliefs". Therefore, you seek validation for your lame justifications on Usenet. You can't give up arguing these issues or your brain would explode into a mushroom-cloud of hypocrisy. Besides, you have claimed to be tired of this bickering many, many times. You have also threatened to give it up many, many times. Each time you come right back here defending the same bogus arguments because you can't control yourself. And this time is no different.

But feel free to take a long sabbatical. Then come back and answer some of the pending questions that you have been avoiding for several months -- maybe a fresh mind will let you fabricate some new lies and excuses. I hope so because your constant repitition of the old ones are getting to be monotonous.

Did you miss this post, Dave? Just in case you did I'm reposting it
because I really think it has issues that you need to address if you
want to continue to defend your arguments -- you didn't answer the
questions:

On Fri, 20 May 2005 07:24:56 -0400, Dave Hall <nojunk_n3cvj@ptd.net>

You can complain about how I "analyze" your words all you want, but
the fact remains that you change their definitions and context when
forced to defend yourself against your own words.

>>Liberal pedophile: guilty of a moral sin.
>>Conservative pedophile: victim of a human flaw.
>
>All pedophiles are guilty of moral sins, which happens to be a human
>flaw.

Then why do you refer to a homosexuality as immoral, yet a homosexual
that is a conservative Republican merely has "human flaws"? This has
to do with the strength of your wording, Dave. You use strong words
when addressing people you despise, but much softer words when
describing bad behavior of people you favor. This isn't a recent
observation, Dave -- it's one of the common characteristics of your
postings for a very long time. And it's very hypocritical.

>>You're a trip, Dave.

Apparently not, since the majority didn't agree with the "principles, character, morality" that the Republicans attempted to impose. So who does the majority party represent if not the majority? And why are you having such a difficult time answering such a simple question?

>>>> Where does the Constitution require, or

>>country to be a Christian state. Where does it say anything of the
>>sort?
>
>I never made any such claim. But I'm sure you've misinterpreted one of
>my past statements and think I said it.

You most certainly did make that claim, and more than once:

"The constitution is relative as well. It was framed by Christian
people with their religious inspired morality contained within its
wording."

"A nation founded by Christian people based on Christian doctrine,
even if the 1st amendment decries that there is no 'official' state
sponsored religion."

"You who claim to support the constitution and the wisdom of our
forefathers (who were all religious people), yet now advocate that we
go above and beyond the definitions called for in the constitution..."

Need more examples?

>I did say that the constitution was written by religious, God
>respecting people, most of whom were Christian.

No, you said they were -all- Christians. Need a quote there too?

>>>> How does gay and lesbian marriage infringe on your rights?
>>>
>>>It is not a matter of infringing on my "rights".
>>
>>
>>That's absolutely correct, Dave.
>
>Of course it is, I said it.

>>
>>> The only thing the government can
>>>or should do is offer a civil union option, to provide gay couples the
>>>same civil rights and responsibilities as straight couples when
>>>dealing with secular issues.
>>
>>
>>You can call it a "civil union" if you want. They can call it a
>>"marriage" if -they- want. That's -their- right. It's not -your- right
>>to prevent them from exercising -their- rights.
>
>From a secular point of view, they have the right to live in sin, but
>no true Christian church would recognize such a union.

And the law doesn't require them to do anything of the sort. It only requires that you respect their -legal- rights. And if they choose to exercise their right to freedom of expression by calling their "civil union" a marriage, or if their religion formally recognizes homosexual marriage, then you have no right to prevent them from exercising their rights. It's a very simple concept, Dave. And why is -that- so hard for you to understand?

> And any
>institution that would, cheapens and tarnishes that institution.

Then that's the choice of the institution, not the government.

>>>You, a big advocate for separation of church and state, should
>>>understand where the line is drawn here. If you advocate that church
>>>doctrine should not be infused into the workings of the government,
>>>then the converse is also true. Otherwise you are practicing
>>>hypocrisy.
>>
>>
>>I agree, the government should not impose upon any religion. How does
>>gay marriage impose government upon religion?
>
>By forcing universal recognition of gay marriages as legitimate, which
>they are not in the eyes of God.

Where, in the Constitution, does it require that any law must be viewed as legitimate in the eyes of God? And even if it did, who exactly would make that determination? God's legal representative?

>>I see your point, Dave. But what you refuse to accept is that marriage
>>is not exclusive to religion.

>
>But it started there.

So? Christmas and Easter originated with Christianity but eventually
merged with pagan festivals. Why aren't you bitching about that? The
Sabbath is on Saturday but the Christians worship it on Sundays,
despite the first of the Ten Commandments. Why aren't you bitching
about that? The Bible embraces slavery, but it's now illegal in the
US. Why aren't you bitching about that?

You aren't bitching about those things because you are only concerned
with homosexuality. You are a bigot, Dave. And a hypocrite.

>>It may have been formally defined under
>>religion, but I wasn't there so I don't know for sure. Regardless, the
>>concept of marriage is not only secular but universal.
>
>By necessity, not by choice. And the secular definition of marriage
>simply adopted the religious definition of marriage in order to define
>the civil rights that married couples would gain. Creating a new
>definition of marriage, that is not endorsed by the church, is not
>acceptable.

Yet it already exists, like it or not.

>Think of it as similar to a copyrighted trademark. The church has
>"licensed" the term "marriage" to the government to use for civil
>purposes, as long as they abide by the terms of the license. Unless
>the church decides to condone a gay union (Not likely), then the
>government has no right to apply the term "marriage" to a secular gay
>union.

The church has a "copyright" on marriage? ROTFLMMFAO!!! Dave, marriage
outside the sphere of religion has been socially recognized for many,
many centuries -- perhaps even longer than religion!

>Like I said before, I have no problem with the government creating a
>gay civil union, with the same civil rights and responsibilities given
>to married couples, just don't call it marriage.

That's not your choice. Deal with it.

>> And as I have
>>pointed out several times before, the Christian definition of marriage
>>is, at best, poorly defined.
>
>But it has been widely accepted in this country for hundreds of years.

>consumer pays. Then the worker will demand more in raises to
>compensate, and you now have inflation.

Wrong. Import tariffs drive up the cost of -imported- products, which
in turn encourages -domestic- production and manufacturing. The prices
will go up, as will the wages; but the overall effect is that the
domestic economy is stimulated, which more than compensates for any
short-term dips. And for the record, it also reduces the amount paid
for welfare since more people are working.

> Secondly, the U.S. is but ONE
>consumer of goods. American companies trying to compete in foreign

>theirs. Surely you can figure out what would happen then.

Wrong on both counts. American innovation and technology is, and has
always been, one of the primary exports of this country. Stimulate the
industrial base and you stimulate people and businesses to be more
innovative (instead of using the word as an advertising gimmick).

>>>Tell me, would you pay 50 - 100% more for a TV or some other product

>But Iraq is not poor in natural resources.

But Iraq's natural resources are only partially owned and controlled
by Iraq. They were fully owned by Iraq under Saddam, but after his
overthrow many international conglomerates (mostly US and UK oil
companies, most of which include the Bush family as stockholders)
invoked claims that existed prior to Saddam. The people of Iraq are
going to see hardly any of the money that comes from their own
resources -- instead it's going right into the pockets of oil company
fat-cats.

>come to terms with the fact that those large number of people who
>disagree with you need not conform to what you feel is appropriate.

It is you who are in the minority, but somehow think you are in the
majority despite evidence, such as the last couple of elections, which
show exactly the opposite. Democrats are still losing seats in
congress, despite the unpopular war in Iraq. The desperation of these
same democrats who just can't understand why they are losing, has
become so obvious, that they don't even try to hide their crass,
shrill, and unprofessional attacks against Republicans. That only
makes the people rebel against them even more.

At least one democrat understands this. It's interesting to watch
Hillary Clinton try to reinvent herself as a "moderate", and to
distance herself from some of her more vocal compadres. I guess she
figures that we'll all forget her former leftist politics, and that
farce that was supposed to be universal heathcare.

>>The majority makes the rules. It's fine that the
>>rights of the minority are considered but it
>>makes no logical sense that the needs of that
>>minority outweighs the needs of the majority.

>It doesn't matter which group. When rights are being taken away or
>infringed upon, the needs you speak of far outweigh any perceived
>majority. You come across as "majority is always right" when it has been
>illustrated and accepted the majority has been wrong, especially with
>this administration.

What is considered right and wrong is usually relative and depends
upon the perspective of the majority. And, like it or not, from the
time we are little kids in school, we learned that life is not always
fair, and that those in the majority set the fads, trends, and rules
whether the rest of us agree or not.

Take slavery for example. At one time the majority of society thought
that this practice was "right". Today, the majority of society

believes that it is wrong. The only thing that has changed is value perspective. If the left is somehow successful in bending the moral compass, and becomes the majority ideology, then it can set the rules. Until then, continue to sit on the side of the road with nonsensical protest signs and let the rest of us earn our keep. And stop whining about how unfair life is.

As another example, I personally think the TV show, "American Idol" (and most "reality" shows for that matter) is a complete waste of time and a total example of vapid vicarious superficiality, and voyeurism. However, a great majority of Americans would disagree with me. So I'm sure that my wish that shows like that would disappear is not likely going to happen as long as they continue to pull the ratings that they do.

>>That's fair as long as the majority is not
>>expected to abandon its core ideological
>>values.

>It goes both ways. You illustrate perfectly the current political
>majority is not only rabid, but has zero tolerance toward any view other
>than their own.

It's not the "right" who has zero tolerance, it is the hypocritical left, who talk the ideals of tolerance, yet they are extremely selective of their "tolerance" and tend to be intolerant to anyone who challenges their views. The left tolerates diverse cultural and sexual perversions, yet has a problem with religious groups. The left speaks of the 1st amendment unless, of course, the person (or group) using it, speaks out against their ideological viewpoint. Vilifying or demonizing ideological opposition by using words which end in "-ist" is little more than an weak attempt at silencing the other side's opinions when they can't argue the points based on their merits alone. The whole "politically correct" speech movement is another example. And what could be more hypocritical than opposing the death penalty for convicted criminals, while allowing (and in some ways encouraging) the killing of innocent unborn children (and without parental notification in the case of minor girls)?

The left epitomizes, and is the pure embodiment of hypocrisy

> Like the Bush admin prostitutes religion, you do the
>same thing with morals, invoking -your- values as the litmus test and
>justification to sit in judgement of others.

And aren't you doing the same, only using a different litmus test?

None if you add all the numbers together to get that 100%. Although I
would tend to think that there should be no difference between
"married spouse absent" and "separated". Although the former category
could refer to things like military deployment for long term. But
then, I'm guessing at that point.

WOW !!!!

A Freeband REPEATER :)

Now this looks like a great DX catch for SWL and Ham alike!

Does it operate 24/7 ?

Yes, but the total effect on climate cannot be positively confirmed.
You have many of the pieces of the puzzle, but not enough to complete
the total picture.

>In comparison, volcanos spew very few and very specific gasses, which
>are usually compounds of sulphur, not carbon. Volcanic ash is actually
>a mineral that's easily identified. And contrary to your statement of

Yes, that true, but the effect of those volcanos on the total climate
is significant, and can disrupt the otherwise cyclic nature of the
climatic shifts.

>I obviously know more about the subject than you, and there are
>scientists that study this stuff professionally and know gobs more
>than I will ever learn. You are the only one guessing, Dave.

I am not guessing at anything. I am reading what those scientists, who
know gobs more than you do, say. There is not a consensus among the
scientific community as to the degree, direction, and involvement of
humans on global warming. There are many scientists who cannot come to
the same conclusions that you seem to have bought into, due to glaring
holes in the evidence.

I could give you a dozen links if you'd like. I already gave some to
Twisty previously.

>the 11/22 year sunspot cycles.

Led to, but not completely dependant on. Tree ring growth does follow
a certain repeatable pattern relative to solar output. But there are
still other factors which can influence them. A volcanic "winter" for
instance, will deviate tree rings from the predictable pattern that
would otherwise occur with a higher than normal solar output.

No, right. If you are going to claim that I am "wrong", protocol
dictates that you provide corroborating evidence to back it up. Simply
claiming that I'm wrong based on little more than your own ignorance
of economics is not going to be seriously considered.

> Import tariffs drive up the cost of -imported- products, which
>in turn encourages -domestic- production and manufacturing. The prices
>will go up, as will the wages;

Which translates to..... INFLATION!

If you want to pay $500 again for a VCR or DVD player, and $400 again for a decent CB (Like it was in the 70's not even accounting for inflation) then maybe this might appeal to you. But the problem is that the American public has become adjusted to receiving high American wages, while paying for cheaper imported goods. If the price of goods increases substantially, then the wages of the workers will have to jump to cover it. When that happens the cost of corporate direct labor and overhead goes up, and they have to raise the price of manufactured goods to cover it. And the cycle of inflation repeats. Part of the reason why the rate of inflation has been so low for the last several years is due to the fact that the cost of goods had actually dropped as corporations tighten their belts and outsource more of their labor. Demand for higher wages has fallen, and inflation remains in check.

>but the overall effect is that the
>domestic economy is stimulated, which more than compensates for any
>short-term dips. And for the record, it also reduces the amount paid
>for welfare since more people are working.

I'm not sure where to start since you have such a myopic view of global economics. This isn't the USA solely owning it's own corporations any more. Practically all large corporations are multi-national to some degree. They compete in many markets of which the US is but one consumer. Tariffs will only help the domestic market. It will do little to help the corporation in the international market share.

>> Secondly, the U.S. is but ONE
>>consumer of goods. American companies trying to compete in foreign
>>markets will not have the protection of the tariff and they will
>>wither under strong foreign competition which they will not be able to
>>match. Also, other countries do not like tariff policies and would
>>likely impose tariffs on our goods in retaliation to our tariffs on
>>theirs. Surely you can figure out what would happen then.
>
>
>Wrong on both counts. American innovation and technology is, and has
>always been, one of the primary exports of this country.

You blindly assume that Americans are the only ones who can master this area. Have you spent any time in the Pacific Rim lately? We're about to be eclipsed by Japan (If not already), and many other countries (such as India) are also closing in on us in technology related fields.

>Stimulate the
>industrial base and you stimulate people and businesses to be more
>innovative (instead of using the word as an advertising gimmick).

You should write motivational slogans. Empty, hollow, and meaningless words designed to make us feel good, but carry absolutely no weight.

But since you cannot provide substance for your claims, allow me to provide it for mine:

http://web.infoweb.ne.jp/fairtradec/new/b031107.pdf

This report outlines, among other things, what happens when a global organization, such as the WHO, reacts negatively to what they perceive as "protectionist" tactics such as tariffs. So tell me again how I am "wrong" about potential retaliation for any tariffs we may place on foreign made goods.

>>>>Tell me, would you pay 50 - 100% more for a TV or some other product
>>>>just to keep the U.S. company here? Considering that the government is

>I guess that's why Mercedes, Jags and BMW's sell so well, huh? Didn't
>you learn anything in our discussion about how a quality education is
>often preferred over a lesser degree? If you did, what part of your
>brain is unable to apply the underlying concept to other situations?

So you posit that a Ford is on equal standing, quality wise, with a Mercedes? People will sometimes pay more for something if they perceive a greater value for it. So I ask again, is the relative value of a Ford the same as that of a Mercedes? Would the Ford be able to compete on a price basis with a Mercedes? If not for the cheaper price of the domestic car, would they not lose all market share to those foreign companies if they were forced to compete on a purely quality basis?

Besides the obvious pedigree and prestige that names like Mercedes bring to the table, there is also the issue of status. That's why idiots will pay thousands more for a Lexus, which is little more than a Toyota with a few superficial frills and a different emblem badge.

Why do you think sales of imported cars have become such a threat
here? GM, Ford, and Mopar are all feeling the pinch. It used to be
that the foreign cars were significantly more expensive (Mostly due to
import tariffs), and the domestic product sold well because it was
cheaper. Now, since the prices are fairly close, the perception of
better quality that comes with the Japanese cars, has convinced people
to abandon the "Buy American" motif, in favor of their own bottom
line.

This example also speaks to your assumption of "superior American
technology" and ingenuity. Don't look now, but we've been beaten at
our own game.

Reagonomics was far from a failure. It is what stimulated the last 2
decades of economic growth, especially in the tech sector which was
heavily made up of small, face-paced startup companies. You know, like
Microsoft.

>

The Fed only controls the rate at which money is borrowed.

Any time the government mucks with the market, it upsets the balance
of the free market. Why do you think healthcare costs are so high?

>>>> But when the standard of living

>The last election pretty much confirms this.

Exactly, as a certain faction (like yourself) who voted for Bush
continue to mistakenly believe Bush had a majority of the people in the
US vote for him (he didn't) and that he achieved a mandate (again, he
did not, unless you can explain Gannon).
It's people like you that are unable to
come to terms with the fact that those large number of people who
disagree with you need not conform to what you feel is appropriate.

>It is you who are in the minority, but somehow

>think you are in the majority despite evidence,

Yes, evidence showing YOU are in the minority not the majority as
relates here among these pages. A perfect example is your shining belief
that speeders are criminals simply because they break a certain law,
which inevitably leads to your inability to distinguish between civil
and criminal infractions, even though you continue to confuse the two
and hold those who infract civil law the same as you do those who
infract criminal laws...as a criminal. Once again, the majority
disagrees with your ignorance.

>such as the last couple of elections, which

>show exactly the opposite. Democrats are still

>their crass, shrill, and unprofessional attacks

>against Republicans.

Goes bothways,,,,like Delay and the comments he made regarding hatred and his threats against judges that you couldn't even locate on your own. In fact, you weren't even aware your own party acknowledged global warming, so you have pretty much ascertained to the group that even though you fancy yourself as educated on such subjects, you fall way short.

>That only makes the people rebel against

>them even more.

>At least one democrat understands this. It's

>interesting to watch Hillary Clinton try to

>reinvent herself as a "moderate",

As many, many republicans have distanced themselves from Bush...

>and to distance herself from some of her more

>vocal compadres. I guess she figures that we'll
>all forget her former leftist politics, and that

>farce that was supposed to be universal

>heathcare.

That you consider healthcare for our own people as leftist politics while we continue to offer free health care to all the Iraqis who simply ask for it illustrates your level of comprehension.

>The majority makes the rules. It's fine that the

>rights of the minority are considered but it

>makes no logical sense that the needs of that

>minority outweighs the needs of the majority.

It doesn't matter which group. When rights are being taken away or infringed upon, the needs you speak of far outweigh any perceived majority. You come across as "majority is always right" when it has been illustrated and accepted the majority has been wrong, especially with this administration.

>What is considered right and wrong is usually

>relative and depends upon the perspective of

>the majority.

Wrong. Rights are not inherent to any majority group, despite what they and you feel. you are not special,....rights extend to all in this country, not merely your imagined moral majority.

>And, like it or not, from the time we are little

>kids in school, we learned that life is not

>always fair, and that those in the majority set

>the fads, trends, and rules whether the rest of

>us agree or not.

>Take slavery for example.

I already did. Get your own examples to illustrate how majority rule is not always right.

>As another example, I personally think the TV

>show, "American Idol" (and most "reality"

>shows for that matter) is a complete waste of

>time and a total example of vapid vicarious

>superficiality, and voyeurism.

Exactly, yet, such audio voyeurism is something you find "juicy". In fact, it was only a few years ago you claimed practicing audio voyeurism turned you on, listening to underaged girls talk about sex on their cordless phones. In this example, you not only had to be made aware that intentional eavesdropping of private conversations is illegal and that you were breaking the law, but you had to be clued in that the majority of people would not find sex talk by underaged minor girls "juicy" as you did.
This is where your fucked up hypocrisy regarding morals and all that bullshit you are forced to regurgitate makes you shine.

  Like the Bush admin prostitutes religion, you do the same thing with morals, invoking -your- values as the litmus test and justification to sit in judgement of others.

>And aren't you doing the same, only using a

>different litmus test?

I never asked another adult to justify their actions. That's reserved for you and those who feel they are entitled to something simply by virtue of ignorance crossed with arrogance.

That is the crux of the matter, we need to control our politicians (public servants) they control the military for us--the force would have to be directed the the servants who are going about with their own plans--just enough to convince them it is more beneficial for them to follow the peoples... we did this with a king of england and his powers once... I would suppose it could be done again... if that need ever arises...

>I already did. Get your own examples to illustrate how majority rule is
>not always right.

Majority rule is always right in the context of the time it is
enacted.

During the time of slavery, the majority believed it was an acceptable
practice. Eventually the majority changed their belief and decided
that it was no longer an acceptable practice.

In no time in recent history has the minority successfully bent the
will of the majority on major issues. Change occurs when the majority
recognizes that the time is right for a different direction. It is not
a sudden thing, rather it is a gradual transition. Liberals have been
attempting to affect political and social change through the
indoctrination of young people and by the dissemination of liberally
biased news for some time. Fortunately, events such as the rise of
talk radio, the ability of people to seek alternative news sources
through the internet, and exposure of some of the purveyors of liberal
bias, has slowed down, if not reversed, this trend.

>
>>As another example, I personally think the TV
>>show, "American Idol" (and most "reality"

>>shows for that matter) is a complete waste of

>>superficiality, and voyeurism.

>Exactly, yet, such audio voyeurism is something you find "juicy". In
>fact, it was only a few years ago you claimed practicing audio voyeurism
>turned you on,

That is yet another lie. I never made any such claim.

I also listened to people making drug deals. But that doesn't make me
a druggie.

> listening to underaged girls talk about sex on their
>cordless phones. In this example, you not only had to be made aware that
>intentional eavesdropping of private conversations is illegal

It was not illegal at the time I was engaged in listening. Any scanner
user could do it. If the FCC or the phone lobby doesn't want people
listening in, they need to block out those frequencies or scramble the
transmissions. Which is exactly what they did for the cell phone band.

We've been all through this before. (As usual) You don't know what you
are talking about. Don't embarrass yourself by bringing it up again. I
am more than willing to post the links to the ECPA, showing the date
that it became effective and what it covers.

No problem, I love that stuff! Sounds like we have a similar antenna rig,
Bury-flex and an Imax2K!

I have lots of critters 'round here and not one chew mark on the coax.

BTW I am also expieriencing the same SWR measurements with the Imax.....
Have you witnessed it in high winds yet... hehe. How 'bout putting it up,
was it fun to deal with that floppy sucka or what ?!

Chad

I made the mistake of ordering a radio from Premiere Electronics (premiere-electronics.net) last Friday, knowing that I wouldn't get a response until at least Tuesday. Well, here it is Friday and no response via email or phone. No one answers the phone. I noticed someone had this problem last September on the newsgroup, but hadn't seen any actual BAD reports about them.

Are they gone for the entire week during Monday holidays? Did I get scammed? Could someone please confirm my fears or tell me it's okay?

Test Man

Hello Lancer:

Good call, but the manual calls out for 4x250, same thing I am sure.

For a really great web site for all the old Johnson radios and amps look
here:

http://bama.sbc.edu/e_f.htm

Wonder why a 6 meter and 2 meter amp isn't offered presently. This amp
is is great, works on both 6 and 2 meters. You could hammer down on the
435 guys and yet shoot skip on 6. (humor)

I saw mine with high wind and ice and it was spooky. I saw it lay flat out
2 weeks ago in straight line winds. Bent the mast but the antenna made it
thru. Now I'm a little more directional to the east :) Till this weekend.

>

I did it alone, well, with the help of a 4 yr old laughing at dad and saying, "all you need now is a hoola-hoop daddy!!!" (you can ofset the sway of the antenna by kinda moving "with" it.)

Johnson made a Viking Thunderbolt 6N2 amplifier with a pair of 4CX250's. It had 2100VDC plate xformer and had regulated screens and bias. The power supply was good to run 1kw DC input. Great sounding amplifier when it was not over driven

What an imbecile. Maybe if you use PVC tubing, it would cost your $15. But for copper or aluminum, it will be way more. I little 3 foot piece of straight aluminum is about $5 at Home Depot.

120. Picked up a small amp

Newsgroup: rec.radio.cb
Date: 2005-06-04 02:01:01 UTC
From: Cliff <thecowboyace@yahoo.com>
Message-ID: <1117848298.973454.157080@g49g2000cwa.googlegroups.com>
Source record: 201006

Picked up a small amp 35 watt. It shows to be putting out the 35 watt full but it still will not let me get out any further than about the, well really was getting out about 5 miles,... mobile RS TRC 447 with a single 36" Bulldog fiberglass mounted on driver's side of toolbox. Read on Wilson FAQ site that when mounting a single antenna it should be mounted on the passenger's side of the vehicle. Had never heard of that before. Was heavy into CB 71-88. Had an SBE Console II with a Siltronix 90-1 VFO with a homemade 2 element quad mounted on a homemade tower made up of two stick of oilfield line pipe. Line pipe cut in half, put a pivot point at the top and down low welded a strap to keep the antenna pole from flying all the way thru the mount and crashing into the ground. Talked a lot with a woman in Nova Scotia, British Columbia and Australia. Only bad thing there was this AH out at 29 Palms CA that had a really badly tuned radio. I transmitted like on 6-10 channels, up and down from a center freq. I could usually blank out anyone from coming in the backdoor but this sumbuck when he keyed up I know that the lights in Honolulu HA would grow dim. don't have any idea what kept him from burning his tower down. I would have been afraid to have gotten close to his coax when he keyed up. But he would come in my backdoor like the guy that was down the street. Friend down the street and I would when that sob got on line would get on line just to see if we could talk to each other and there was no way that we could talk to each other. I really don't relixh running a damned linear but when you can't even talk on the highway to other truckers because of the AH yo have to do something to be able to enjoy it.

But with that quad I could talk to skip barefoot, although the SBE Console II was tweaked out and I don't remember where on the wattmeter it would swing to.

Anyways, I was just wanting to complain some because of the amp. Paid the $1.25 per watt which was a good price but no workie goodie though. Any suggestions. Been thinking of getting one of the antennas that have the big round wire coil in the center of the antenna to mount on my pickup. Will this help out any? I understand, or at least have heard that running dual antennas, if they are not at least 8ft apart they really don't work that well. Ideas on that?

Also I am looking for the CB shop that is in Bridgeport, Texas. Anyone got the name/address/phone number for this guy?
Hey take care

If you do go to ebay, take GOOD clear pictures
with some close up ones. It is the best way to get the most cash!!!
Many put up shitty pictures, small pictures, fuzzy pictures, dark
pictures and you just can't
tell what you're buying. Some do this to "hide" bad products, chips,
scratches. dent's.
worn paint, etc.
good luck

G.Hammond, SGC

--snip---

I didn't want to go E-Bay, but alas - it looks like I'll have to. Oh
well......

Thanks for your input.

Wow, last time I checked, Taiwan parts were fully interchangeable with russian parts--American, canadian, chinese, etc parts too... only good thing is--russians build 'em like they are meant to last a lifetime--doubt you'll ever have to find out the parts are that easily interchangeable--Americans used to do stuff like that--before all our cheap junk started coming from taiwan and china...

Hey Jay how close is your QTH to hiway 58?
And do yo have FRS capabillty?
We are comming thru at the end of June heading to Las Vegas.
I always carry FRS on my trips, also can work 2 meters.
Like to hook up to say howdy as we pass by.
We are comming from Oxnard. and use hiway 14 to the 58 and head to
Barstow.

Dan on the coast.

Amplifiers are 100% illegal on CB radios. You are not allowed to use them.

Hello, John

What will be interesting is when someone goes to replace a smaller tube (say a regulator) in one of the things. We expect to pay $100 or so for the big ones; wait until they find out the small stuff now can cost $20 or *far* more these days.

Only 10 years ago, I could get a 12AX7 for perhaps $6.00.

Now, I have to special order them and the small tubes such as that, if *new* and not pullouts, run $20 to $30 a piece!

30 year old technocracy? It *is* amazing. Amazingly expensive LOL

Hi Lou, when I take pictures I use a program called PageImage.
With this program I can edit the pics for a better pic. Nothing changes
other than
brightness, sharpness and size. Doing this people can see much detail
in what they might bid on.

Yes, all new projects here are with russian tubes... and you can't
afford to buy them through american distributors, they have about a
500%-1000% markup!!!
I think you can make contact though an address on that page I gave you
and probably buy the tubes direct... even with shipping a real deal...
luckily I have a contact though a friend...

Warmest regards,
John

... the difference between 35 watts and 5 watts, at any
distance, is so small as to be un-noticeable... I would not worry about
running that full time--up to about a 100 watts is nothing to worry
about (even much larger power in mobiles)... I would begin to worry only
if I was running high power though a base station... I only run 3.5
Kilowatts when the skip is in on my beam, can pretty much talk to anyone
I can hear... but with that kind of power I realize there is a risk...
must have been awfully lucky though since I have been running greater
than 1Kw on skip ever since the early 1970's and have yet to even get a
notice...

I leave my little 300 watt base linear on all the time... but I don't
tell anyone and I don't hook up a BIG LOUD MIKE which pisses everyone
off, I DON'T ROGER BEEP and I DON'T CUSS and DON'T make an obnoxious A$$
of myself... it makes it sound like I am not running power and most just
think I have a good setup and antenna...

Warmest regards,
John

Actually it is 8.45 dB difference. In an omnidirectional antenna it would be decernable difference. While it will not make a large difference it will be noticable. It would be more effective with directional antennae.

I have available a Thunderbolt 305 Linear Amplifier. It is in working condition, but definitely needs a good cleaning and a tuneup. It has not been used in at least 10 years, but it goes on immediately when plugged in.

The ON/OFF switch needs to be replaced as the amp goes on without flipping the switch.

I do have pictures available upon request. Please email for more details.

Thanks

James:

Well, yes, but there is the meter readings and then there is
actual/practical use--you will find 35 watts is hardly worth the effort
unless put into a beam (directional antenna) of 7 db or greater gain...
in a mobile or on a base running a omnidirectional antenna no one is
going to be real amazed over your signal increase...
In practical use here is a general case example of what I have seen in
real use:
1) you are running an omniantenna
2) the guy at the other end is running an omniantenna
3) without an amp (4-5 watts) he has you at a 3 on his meter
4) you kick on a 100watt amp
5) now he has you at a 7 or right around that on his meter...

... so you see, 35 watts is not going to be that big of thing... now
kick on a kilowatt and he is going to get excited!!! <grin>

Warmest regards,
John

I have a similar program, but ya know, half the time I put more time into the ad copy than the picture. But, as I said - usually my problem is lighting. I have "lightened" pictures which were dark, but it depends too on the picture, some tend to get washed out if made too light. But still, thanks for the tips.

Lou

Hi Lou, when I take pictures I use a program called PageImage.
With this program I can edit the pics for a better pic. Nothing changes other than brightness, sharpness and size. Doing this people can see much detail in what they might bid on.

If you do go to ebay, take GOOD clear pictures
with some close up ones. It is the best way to get the most cash!!!
Many put up shitty pictures, small pictures, fuzzy pictures, dark pictures and you just can't
tell what you're buying. Some do this to "hide" bad products, chips, scratches. dent's. worn paint, etc.
good luck

G.Hammond, SGC

--snip---

Thanks for the advice on the pics. I "try" to do the best pictures I can, and I usually have decent luck. In my case, lighting makes all the difference. My house is on the dark side no matter how much light I add. As for going to e-bay, I don't know that I have much choice here - the news groups aren't doing it, even if Swap groups. The local want ads come out every weekend, I can have the stuff advertised a good 4 days before they come out, and to a much wider audience.

Thanks again,

Lou

No, just buying a refurb Cobra 29. I don't need anything illegal.
Although I did want them to add talkback to the radio prior to
shipping. They just had a good price on it. Anyway, I think I'm okay
cause I talked to someone who still buys from them, then checked my
bank records and everything seems okay. I was just getting jumpy I
guess. Why am I a keyclown?

I can't speak from too much AM experience, but I can share my observations from HF SSB, and, legal issues aside, it is my opinion that 5 to 35 is worth the price of a few fast food meals. As JS suggested, there are far worse things going on than QRO on 11 meters.

I usually operate at 20m or 40m at 10W, and when I can't get through to a station I'm reading at R4-R5, boosting up to 50W almost always does the trick. Going from 5 to 35 is a comparable dB gain, and I think it'd be worth it.

My rig is capable of 100W, but I've only keyed up once at full power, and that was to verify that it actually worked.

I'd suspect the antenna is a big part of the problem. Maybe it's not tuned or grounded properly? As far as I know, there isn't any reason to favor one side of the vehicle for antenna location. On the driver side, you've got drive-in windows to worry about. On the passenger side, you've got branches. For truckers, neither is really a big concern. If there is any difference in radiation, I would bet a single antenna on either side would have the same coverage ten miles down the road.

If you want to run phased twins, the distance between them is important, as it affects the gain and radiation pattern, but there's no critical distance that will give you the best performance. The closer they are, the more like a single antenna they will behave. When you mess with the phase angle between the antennas for different patterns, the distance becomes more critical, but it's my understanding that truckers are concerned with what's on the road ahead and behind.

Hello Rocky:

With the FCC going to take the morse code testing requirement out of the amateur radio tests for the HF privileges, I kind of dough it.

Its possible that the new amateur radio license without the code, for HF privileges may even kill the freeband and a lot of skip shooting on 11.

6 is to erratic, and ifey, you will need a much solider band.

However 6 is a blast, I get a kick out my Interceptor 10K cut for 50.125 Mc. It really works well. I got a local also on 6 with a 5 element beam and of course a lossy Gamma Match, that slows that beam way down big time. I am usually just a needle's with stronger than the guy with the beam. He maybe also have something wrong other than just a Gamma Match?!?!?!? I think he's gonna buy a big amp hehehhehehe.

Maybe with a left over Moonraker 6 boom, that 32 feet long I can make a killer 6 meter beam that kicks some major a$$, oh yeah!

Jay in the Mojave

As with any pirate operation, a person is a fool to run big power and operate from one location... mobile operation is quite different... however, one should always obey the law...
... there was one guy here who had a mobile jammer, would circle the city all day/night long--hams attempting to triangulate was the mode of the day... he played rap music, about drove us all nuts... when he would fire up on friday and sat I would just abandon the band... last I heard, his buddies loose lips almost got him busted and although no one was ever able to pin anything on him, the jamming stopped when a particular guy started being watched... but then, perhaps the real guy was just smart enough to quit when there was a fall guy all lined up... who knows...

Passing thru Greenbay this weekend, I heard this dude on 19 talkin' smack about the truckers and how they wanna give smokey reports to each other.

Hey dude, they do that everywhere!

You Do NOT have ownership rights to Channel 19 AM!

We really don't give a damn about who you is!

YOU had better "sleep with one eye open and be gripping your pillow tight..."

'Cause the drivers out there with CBs will visit you one night -- you guess which night!

What is your CB handle? "CBer Wannabe"?

I really couldn't hear you with those OTR drivers hammering you with their CBs.

You're just a mud-duck!

You really need help.

Go to either Piedmont Hospital or Central State Hospital in P'burg and check yo self in b'fo you wreck yo self.

Ya heard?!

We have these neighbours who live across the street from us. Have for 3 or 4 years now (more maybe). The woman looks beautiful, thin, too tanned, probably wears too much makeup and is in her late-'30s. I don't know her name, so when referring to her, to my family, I call her "Brynn". And since I didn't know the husband's name, I call him Phil. Soon after, my family started referring to them as Phil and Brynn, too. I joke that she looks like a woman who would DO "a Brynn". It's not funny, I know... but I thought I'd share it w/ you.

At this point, I doubt "civil war" would define it correctly...
More like us against all the laotians, vietnamese, philippinos,
mexicans, indians, pakis, middle eastereners, etc, etc, etc which our
public servants have given citizenship so we can support their medical,
schools and use of our public facilities...

To learn the technical TRUTH about CB Radio without all the hype from people who are just plain ignorant, check out the following books from CBC International. They're selling right now at a big discounts on our EBAY & AMAZON stores too.

Check it out!

To see exactly what these books look like, plus all the specific, chapter-by-chapter details, see our Web at:

www.cbcintl.com

Some of the books included are:

BOOK #1: THE "SCREWDRIVER EXPERT'S" GUIDE To Peaking Out & Repairing CB Radios. List $25. The most popular "big dummy's" guide ever published on do-it-yourself CB repairs & modifications. Covers peaking of receivers, transmitters, modulation, mike problems, antenna & SWR problems, detailed frequency modifications for both crystal & PLL radios. Loaded with charts, illustrations, and specific instructions for most brands including the new export models. This latest edition also covers slider and broadbanding tricks, FM conversions, and much more!

BOOK #2: THE CB PLL DATA BOOK. List $20. The only complete reference source on CB PLL synthesizer circuits ever published! Detailed PLL theory explained in layman's terms. How they work, and how to modify them for many more channels. Includes specific PLL block mixing diagrams, truth charts, & IC pin function diagrams for nearly every PLL chip ever used. Covers all the most popular U.S. & export chassis, with specific listings of all models using the chip.

BOOK #3: UNDERSTANDING & REPAIRING CB RADIOS. List $42. Giant 370-page technical book for the professional repairman. Picks up where the "SCREWDRIVER EXPERT'S" GUIDE leaves off. Includes circuit descriptions & troubleshooting guide for 23- & 40-Ch., crystal & PLL, solid-state & tube, AM, FM, SSB, CW, American & export models. Covers test equipment (& where to find it), transistor basics, synthesizers, receivers, transmitters, power supplies, T/R switching, antennas, interference, parts & accessory sources. Over 350 illustrations including schematics, charts, and photos. Huge subject index also lets you look up repairs by symptoms. This is "must" reading for any serious CB technician!

184. FREE! "THE CB EPROM DATA BOOK" OF FREQ. MODS

Newsgroup: rec.radio.cb
Date: 2005-06-06 14:26:56 UTC
From: Lou Franklin <lou@cbcintl.com>
Message-ID: <d9n8a1d908okqs0buvreauc2mjifo4i4b5@4ax.com>
Source record: 201071

FREE!!

For advanced techs and serious radio hobbyists, we're now offering a FREE copy of our previously published "CB EPROM DATA BOOK" by Martin Pickering. (EPROM = Erasable Programmable Read Only Memory.) We sold it for many years but it's now out of print. This little manual of 60 illustrated pages is an absolute GEM of CB technical knowledge you'll just never find anywhere else. And it's yours for FREE from our Web site.

This book reveals the secrets of advanced channel programming, and picks up where our "CB PLL DATA BOOK" (www.cbcintl.com/pllbook.htm) leaves off. You'll get a thorough background in how these amazing programmable chips can be used to modify many popular CB PLL circuits for expanded frequency coverage. Covers the basic programming techniques, and even includes real PC board artwork for making EPROM circuits. Sample artwork includes EPROM boards for the popular MB8719, PLL02A, ï¿½PD2824, and ï¿½PD858 PLL circuits.

Best of all, the price is right--namely, FREE! Download your FREE copy of "THE CB EPROM DATA BOOK" (948 KB Adobe PDF) at:

www.cbcintl.com/docs/EpromBook.htm

Don't forget to check out all our other CB specialty books, plans, kits, & high-performance accessories at:

186. Re: Doug Smith about to be outed

Newsgroup: rec.radio.cb
Date: 2005-06-06 15:57:31 UTC
From: carlbbsegan@yahoo.com
Message-ID: <1118073451.675268.105340@g49g2000cwa.googlegroups.com>
Source record: 201073

Doug Smith is a law abiding citzen who caught this anonymous "George Orwell" and his group committing illegal activities.

I would consider this George Orwell character part of the CB "Mafia". They are blatant outlaws in the CB world and protect their illegal activities with very real threats and a high level of secrecy. Doug found out about one of their activities and the above threat is a direct result.

Disagreeing viewpoints aren't a problem for the majority..it's people
like you that
mistakenly feel those who hold views contrary to your own are somehow of
the minority.

>The last election pretty much confirms this.

Exactly, as a certain faction (like yourself) who voted for Bush
continue to mistakenly believe Bush had a majority of the people in the
US vote for him (he didn't)

>Then how do you explain how he won?

That you mistake the majority of registered voters who actually voted
for the majority of the people in the US is your problem. That you fall
victim to the deliberate disinformation campaign that Bush had a mandate
is a bonus.
It's people like you that are unable to come to terms with the fact
that those large number of people who disagree with you need not conform
to what you feel is appropriate.

>It is you who are in the minority, but somehow

>think you are in the majority despite evidence,

Yes, evidence showing YOU are in the minority not the majority as
relates to many, many positions among these pages. A perfect example is
your shining belief that speeders are criminals simply because they
break a certain law,

>You just keep repeating that lie in the hopes

>that it'll suddenly become true. I NEVER ever

>made the statement that speeders are

>criminals.

You did in many fashion. For instance, you responded (concerning the
speeder being called a criminal) "if the shoe fits" and you have indeed
labeled those who commit civil infractions as "criminal". The speeding
analogy was used to exterminate your poor analogy that dx'ers and

freebanders are criminals. You changed the equation by adding additional parameters invoking that dx and freebanding can lead to other charges in certain instances,..same with speeding. You are still unable to comprehend neither offense is a criminal offense.

> Democrats are still

>losing seats in congress, despite the

>unpopular war in Iraq. The desperation of

>these same democrats who just can't

>understand why they are losing, has become

>so obvious, that they don't even try to hide

>their crass, shrill, and unprofessional attacks

>against Republicans.

Goes bothways,,,,like Delay and the comments he made regarding hatred and his threats against judges that you couldn't even locate on your own.

>Which pales in comparison to the vitriol

>spouted by the likes of Al Gore, Howard Dean,
>Ted Kennedy, Hillary Clinton, and others.

60% of this majority you continue to invoke as justifications for whatever the Bush camp does agree with stem cell research, yet, in the third week of May, Bush said, addressing this situation "There is no such thing as a spare embryo" while attempting to explain his reasoning for opposing it. In the first place, what about this majority now, Dave? In the second place, each and EVERY single company that is involved with assisting infertile couples conceive tosses away countless embryos on a regular and ongoing basis. What the hell is Bush talking about?
Now we have found abuses at Gitmo concerning the koran -were- true. As always, more lipservice from Bushyboy, downplaying it as "a few isolated incidences"...yes, incidents that are becoming commonplace and part of a pattern of this administration.
In fact, you weren't even aware your own party acknowledged global warming,

>You're lying again.

Which are you claiming isn't true, now? The fact that you weren't aware of global warming, asked for proof, was shown, then changed your claim to one of how much effect it actually has on the world, or the fact that you were not aware your own party acknowledged such?
Either one is there for the reading.
You have pretty much ascertained to the group that even though you fancy yourself as educated on such subjects, you fall way short.

>Well, sure, when held against your wild

>imagination,

Try not and let your anger dictate your posts become personal because as much as you need to believe it, global waming is not my imagination.

> I do fall short. But when held

>against the truth, I do just fine.

When the truth is presented, you attack it, the poster, change the subject, snip it, or claim the information is incorrect..Lol. Such was done with your wild ants that democracy was not only taking place in Iran, but that Iraq was improving. You asked for reports and were given several.
On other occasion, you ask for what you mistakenly misrepresent to yourself as "proof", and when such is given, you claim the information is wrong because "mistakes happen",,,lol...I agree, and the only mistake here is made by yourself..repeatedly.

>That only makes the people rebel against

>them even more.

>At least one democrat understands this. It's

>interesting to watch Hillary Clinton try to

>reinvent herself as a "moderate",

As many, many republicans have distanced themselves from Bush...

>A few uncertain doubters does not constitute

>"many".

Well respected senators, generals, advisors and others on the front line not constitute uncertain doubters. Ditton for all those defectors who resigned from the Bush admin.

>and to distance herself from some of her more
>vocal compadres. I guess she figures that we'll
>all forget her former leftist politics, and that

>farce that was supposed to be universal

>heathcare.

That you consider healthcare for our own people as leftist politics while we continue to offer free health care to all the Iraqis who simply ask for it illustrates your level of comprehension.

>.As is typical for you, you divert from one issue

>to another.

Something is very wrong with you, as -you- brought up health care. As is standard with your incompetence you blame another for your goofy gaffes.

>I oppose all forms of socialized medicine

>whether it be for us or Iraqi's.

Yet, instead of being proactive (as you prefer to imagine yourself) and doing something about it or even speaking out about it, you choose to ignore the wild spending of health care spent on Iraq, and instead choose to whine and snivel and continue to be impotently REactive about history that has no relation to the present situation. Frank has demonstrated the reason you employ this particular method is because you can not discuss current political situations due how little informed you are of current affairs.

>The majority makes the rules. It's fine that the

>rights of the minority are considered but it

>makes no logical sense that the needs of that

>minority outweighs the needs of the majority.

It doesn't matter which group. When rights are being taken away or infringed upon, the needs you speak of far outweigh any perceived majority. You come across as "majority is always right" when it has been illustrated and accepted the majority has been wrong, especially with this administration.

>What is considered right and wrong is usually

>relative and depends upon the perspective of

>the majority.

Wrong. Rights are not inherent to any majority group, despite what they and you feel, you are not special,....rights extend to all in this country, not merely your imagined moral majority.

>That has nothing to do with the concept of

>what is "right or wrong" and who sets the

>standard by which this is gauged.

My gosh, you finally did it. You talked yourself into a circle. It has everything to do with it. The fact that you feel you have a right to deny others their rights under the impossible guise that your morals are somehow superior to those who do not subscribe to your core beliefs makes about as much sense as your position that rights have nothing to do with the concept of right or wrong.

>And, like it or not, from the time we are little

>kids in school, we learned that life is not

>always fair, and that those in the majority set

>the fads, trends, and rules whether the rest of

>us agree or not.

You are dead wrong. Fashion trends and fads have indeed been set by extreme minority factions on many, many occasions. You're blathering.

>Take slavery for example.

I already did. Get your own examples to illustrate how majority rule is not always right.

>Majority rule is always right in the context of

>the time it is enacted.

Slavery was never right, David, no matter what the time -or- the context, nor is beating your wife, but you go on and argue how you agree these laws were right simply because they were enacted by what you refer the majority. Perhaps such a fucked up core belief system is what was responsible for your marital and personal woes in the first place.

>During the time of slavery, the majority

>believed it was an acceptable practice.

>Eventually the majority changed their belief

>and decided that it was no longer an

>acceptable practice.

>In no time in recent

(a relative term you can apply to mean any length of time you wish)

>history has the minority

>successfully bent the will of the majority on

>major issues.

That's -exactly- what happened on countless issues. Most recently it happened with the taking of God and religion out of the schools. The will bends and this majority you continue to misrepresent changes the law, especially when it is shown the law is -wrong- or poorly constructed by those you hold as the -majority-. History is rife with examples of laws that were enacted by the "majority" but were struck down as unconstitutional and you denying such takes place on a regular basis is nothing short of astounding.

>Change occurs when the majority recognizes

>that the time is right for a different direction.

Often brought on by the minority bending the "will" of the majority.

>It is not a sudden thing, rather it is a gradual

>transition.

Aw gee,,,,you're off and ranting,,er, running on yet another topic.

>Liberals

(snip) Liberals founded this country and the fact that Bush has successfully forced you to accept his redefined albeit incorrect definition of "liberal" is almost as funny as your blaming everyone but the current leaders of this country for everything,,you blamed the liberals, you blamed the queers, you blamed the democrats, hell Dave, you blamed everyone but the leader of this country for all the problems we face. It must be nice to go through life believing the person you voted for has done no wrong, is the leader of this country, and responsible for nothing except good things.

>As another example, I personally think the TV

>show, "American Idol" (and most "reality"

>shows for that matter) is a complete waste of

>time and a total example of vapid vicarious

>superficiality, and voyeurism.

Exactly, yet, such audio voyeurism is something you find "juicy". In fact, it was only a few years ago you claimed practicing audio voyeurism turned you on,

>That is yet another lie.

No, it's not. Google it.

>I never made any such

>claim.

You claimed listening to underaged girls on cordless phones speaking of sex was "juicy". You were not a minor when you spoke of such acts being "juicy". Now, the moral -majority- of people would find it disgustingly perverted that a man of your age finds sex talk of minors "juicy". Your words and actions speak loud and clear to the world, David, as only you have this incredible belief only you can see yourself as you really are and that you are misunderstood to the point that you need reiterate and explain yourself to each and every person you disagree. You plead and plead that everyone misunderstands you David, but what you can't comprehend is those people -are- the majority of posting regs in this group,

>I also listened to people making drug deals.

>But that doesn't make me a druggie.

It also doesn't disqualify your remarks just a few short years ago
calling sex talk between minor girls "juicy".
In this example, you not only had to be made aware that intentional
eavesdropping of private conversations is illegal

>It was not illegal at the time I was engaged in

>listening.

It was. This is another area concernig the law of which you are
extremely ignorant.

>Any scanner user could do it.

No David,,the last time this was brought up, you tried and failed with
this excuse. When it was illustrated what a pervert you are, you come
back with the defense that the incident occurred years and years ago,
when you were a younger man. It appears you can remember vividly the
details of such an incident that many years ago, but can not recal a
simple Phelps antenna when inquired of a comment you made a few year's
previous alluding to such. Nevertheless, back when you were that young,
the scanners were not digital, but crystals, and contrary to your claim
"any scanner user could do it", that simply was not the case back then.
In fact, cordless phones came on the market in 1980 and were ALL 27 MHZ
phones, a specific crystal that did NOT come imbedded in "any scanner".
All of this coupled together with your oft-invoked "statistical
probablility" factor, makes you to be one big freegin' liar! LMAO!

>If the FCC or the phone lobby doesn't want

>people listening in, they need to block out

>those frequencies or scramble the

>transmissions.

Then the same logic can be applied to use of the freeband. It was always
a crime to eavesdrop on one's private telephone conversation using
electronic equipment, David. It violates federal wiretap law, but your
position of "thinking like a criminal" (your words) is interesting.

>We've been all through this before. (As usual)

>You don't know what you are talking about.

As usual, you get so caught up in your lies, you begin to blame others
for your problems.

>Don't embarrass yourself by bringing it up

>again.

That's awful nice of you, but I prefer to let you, on occasion, talk
sideways for the entertainment of all,..now tell us once again how it
was legal for you to eavesdrop on private cordless telephone
conversations (when scanners were using crystals) using an electronic

device, when cordless phones were of a frequency which scanners did not come with.

>I am more than willing to post the links to the

>ECPA, showing the date that it became

>.effective and what it covers.

Try reading what applied to your situation, not what you think gave you permission to violate the law. Ignorance is no excuse for breaking the law. If you are going to break the law, you should at least be educated about the law you break and penalties you face.

Busybody? Do you know the background behind what transpired? There was a legitimate discussion on illegal activity on a popular BB. A Link to a website touting blatant disreguard to FCC rules was given as an example and an attack ensued from the "outed" website.

Do you encourage anarchy? If someone was committing a crime against you, would you want others to turn a blind eye and ignore your plea for help?

If you want an example of idle hands being the work of the devil... look at the freebanders and pill box users. They have so much time on their hands they resort to breaking the law and threatening anyone who would get in their way. Nothing more than domestic terrorists.

(Most of your usual babble snipped)

>>I never made any such
>>claim.
>ï¿½
>ï¿½You claimed listening to underaged girls on cordless phones speaking
>of sex was "juicy".

An adjective used to describe the nature of the conversation. It
reflects in no way how I personally reacted to it. Once again you read
more meanings in words than are actually conveyed.

>You were not a minor when you spoke of such acts
>being "juicy".

No, but I was no more than about 22. The age difference between a 22
year old and an 18 year old is not even worth talking about. In fact,
my wife is 3 years younger than me. So what of it?

> Now, the moral -majority- of people would find it
>disgustingly perverted that a man of your age

22?

> finds sex talk of minors
>"juicy".

Again, the word describes the tone of the conversations. At no time
did I claim that it "got me off" or affected me in any other way other
than psychological curiosity. Anything other than what I have just
said, is purely your imagination running amuck.

>Your words and actions speak loud and clear to the world,
>David, as only you have this incredible belief only you can see yourself
>as you really are and that you are misunderstood to the point that you
>need reiterate and explain yourself to each and every person you
>disagree.

If someone is a thick and with the incredible comprehensively
challenged as you are, I guess I do have to explain everything in
simple basic terms. Otherwise you garner meanings that do not exist
and assume something that was not expressly conveyed.

>You plead and plead that everyone misunderstands you David,

I have never claimed that "everyone misunderstands me" as I have given
many people good advice from Radio, to practical matters. YOU are the
only one who does not understand me, and the reason for that is in you
inability to comprehend simple sentences.

>>I also listened to people making drug deals.
>>But that doesn't make me a druggie.
>ï¿½
>It also doesn't disqualify your remarks just a few short years ago
>calling sex talk between minor girls "juicy".

There was NO law preventing interception of cordless phones in the
1980's. None, nada, zilch. Prove me wrong if you can. And I'll laugh
at your attempts.

>>Any scanner user could do it.
>
>No David,,the last time this was brought up, you tried and failed with

>"any scanner user could do it", that simply was not the case back then.
>In fact, cordless phones came on the market in 1980 and were ALL 27 MHZ
>phones, a specific crystal that did NOT come imbedded in "any scanner".
>All of this coupled together with your oft-invoked "statistical
>probablility" factor, makes you to be one big freegin' liar! LMAO!

Your lack of age and experience is glaringly apparent in this
statement. First off, the first programmable scanners came out in the
late 70's. Look into the Bearcat 101, the SBE Optiscan, the Regency
"Whamo 10" and the Tenelec.

My Bearcat 210xl was purchased in 1980 or 81, and you can clearly see
it in the pictures of my station in 1985 and 1990 as shown on my
website.

Secondly cordless phones were not on 27 MHz (What idiot would put
cordless phones on the already crowded CB band?). The 1st generation
cordless phone was on 49 Mhz for the handset and 1.7 Mhz for the base
unit. The second generation phones were 49 Mhz and 46 MHz. Later
models dropped down as low as 44 Mhz. Then the 900 MHz phones came out

sometime in the 90's.

>
>>If the FCC or the phone lobby doesn't want
>>people listening in, they need to block out
>>those frequencies or scramble the
>>transmissions.

>Then the same logic can be applied to use of the freeband.

How?

>It was always
>a crime to eavesdrop on one's private telephone conversation using
>electronic equipment, David. It violates federal wiretap law, but your
>position of "thinking like a criminal" (your words) is interesting.

Wire tapping did not apply to radio devices at that time. That was the
glaring loophole in the wiretap law. There could be no reasonable
expectation of privacy when you run unencrypted analog FM signals over
a band that is generally easy to receive by "common" radio receivers
(Such as a scanner).

Again, prove me wrong if you can (But I won't hold my breath).

>>I am more than willing to post the links to the
>>ECPA, showing the date that it became
>>.effective and what it covers.

>Try reading what applied to your situation, not what you think gave you
>permission to violate the law.

The ECPA is what specifically addresses wireless phone devices.

> Ignorance is no excuse for breaking the
>law. If you are going to break the law, you should at least be educated
>about the law you break and penalties you face.

Remember that each time you run your unlicensed transmitter on the
freeband.....

Truth is always snipped, David, especially when your lies about cellular
phones are brought to light with proof.

>I never made any such

>claim.

You claimed listening to underaged girls on cordless phones speaking
of sex was "juicy".

>An adjective used to describe the nature of the
>conversation.

Wrong,,,an adjective chosen by -you- to convey -your- interpretations of
sex talk by minors.

> It reflects in no way how I personally reacted

>to it.

No one claimed differently. in fact, you probably jacked off to it, but
not one tried claiming how you reacted to it. You invoked how you felt
about it. You found such talk "juicy".

>Once again you read more meanings in words
>than are actually conveyed.

But of course, David. This is your pattern. This is the part where you
redefine what you really meant with the term "juicy" when eavesdropping
on minors talk about sex.
You were not a minor when you spoke of such acts being "juicy".

>No, but I was no more than about 22.

You lie. You made the post a few years ago and called the act "juicy".

>The age difference between a 22 year old and
>an 18 year old is not even worth talking about.

That's right, except you called it "juicy" just a few short years ago.

>In fact, my wife is 3 years younger than me.

And her middle name begins with T and she lived at 1819 Gravers Road in Plymouth Meeting, a (according to your definition) suburb of Norristown that appears when plugged into google maps,,remember,,,,,it was that thing you said you tried but it gave you "nada" results.

>So what of it?

Now, the moral -majority- of people would find it disgustingly perverted that a man of your age

>22?

You weren't 22 when you described the act you performed. You said it in your post only a few short years ago, and I quote, that their "talk of sex was "juicier" than Melrose Place", which came on in the nineties, when you were well into your thirties. Just for the record, you did not claim the act of eavesdropping on these minors was "juicy" when you did the act, you said it a few short years ago. Yet, you entertainingly think yourself as part of some imagined moral majority. Any majority of moral people would not describe the act of eavesdropping on minors speaking of sex as "juicy" at your age. Get over it, David. You're a perv and your problems are all over these pages.

>Again, the word describes the tone of the

>conversations.

Normal moral adults would disagree with you, David. Normal moral adults would not find such "tones" of minors as "juicy". And again, the term denotes -your- interpretation of sex talk by minors as such.

>At no time did I claim that it "got me off" or

>affected me in any other way other than

>psychological curiosity.

Of course you did, you caled it "juicy". Please do not embarrass yourself again by misleading yourself that anyone at all would believe a young man of the age you speak would consider any psychological factor concerning such talk.

>Anything other than what I have just said, is

>purely your imagination running amuck.

Your words and actions speak loud and clear to the world, David, as only you have this incredible belief only you can see yourself as you really are and that you are misunderstood to the point that you need reiterate and explain yourself to each and every person you disagree.

>If someone is a thick and with the incredible

>comprehensively challenged as you are, I

>guess I do have to explain everything in

>simple basic terms.

Which you have demonstrated throughout your posting history with all you disagree, David. Your errant behavior began long before I came along and tweaked you with your own offensive acts.

>Otherwise you garner meanings that do not

>exist and assume something that was not

>expressly conveyed.

You plead and plead that everyone misunderstands you David,

>I have never claimed that "everyone

>misunderstands me"

Sure you have, David, You do it in the manner of attempting to explain away "just what you really meant" after manking a post using words you have no clue their definition. For countless examples of you not understanding the majority of people you disagree, one merely needs google "sandbagger" and the words "you mean". Cripes, there is enough reading for even the most remote layperson to get a handle on your communication deficits.

>as I have given many people good advice

>from Radio, to practical matters.

Which does not excuse your deficit.

>YOU are the only one who does not

>understand me,

You told Frank he couldn't understand your politics. You said Shark couldn't understand the laws in your state because he didn't live there (a most ludicrous comment coming from the end we expect it most) after he produced proof that one can indeed et a speeding ticket in your state for going less than 5 MPH under the posted limit, despite your objections claiming otherwise.

> and the reason for that is in you inability to

>comprehend simple sentences.

Actually David, and I'm not the only one who has pointed this out to you, it's because you misuse words of which you have no clue their definition. This is probably why there are so many posts with you not comprehending what others say to you. LOL..again try the google with your words "Do you mean" or "did you mean". The number of posts made by you seeking clarification to other's words are numerable, yet, your knee jerk reaction is to blame another. Do the search David, it's not the "other", it's you all throughout your posting history who can ot comprehend what others tell you. Despite your paranoia, it's not just me David, there are many many others in those returns which have you

expressing difficulties. The ony common theme in ALL the posts, is you disagreed with each and every one of those of which you needed to seek clarification. This holds with your need for validation.

>I also listened to people making drug deals.

>But that doesn't make me a druggie.

It also doesn't disqualify your remarks just a few short years ago calling sex talk between minor girls "juicy". In this example, you not only had to be madeaware that intentional eavesdropping of private conversations is illegal

>It was not illegal at the time I was engaged in

>listening.

It was. This is another area concernig the law of which you are extremely ignorant.

>There was NO law preventing interception of

>cordless phones in the 1980's. None, nada,

>zilch. Prove me wrong if you can. And I'll laugh
>at your attempts.

You've been proved wrong, such as on the roger beep issue, and most -have- laughed at you, David.

>Any scanner user could do it.

No David,,the last time this was brought up, you tried and failed with this excuse. When it was illustrated what a pervert you are, you come back with the defense that the incident occurred years and years ago, when you were a younger man. It appears you can remember vividly the details of such an incident that many years ago, but can not recal a simple Phelps antenna when inquired of a comment you made a few year's previous alluding to such. Nevertheless, back when you were that young, the scanners were not digital, but crystals, and contrary to your claim "any scanner user could do it", that simply was not the case back then. In fact, cordless phones came on the market in 1980 and were ALL 27 MHZ phones, a specific crystal that did NOT come imbedded in "any scanner". All of this coupled together with your oft-invoked "statistical probablility" factor, makes you to be one big freegin' liar! LMAO!

>Your lack of age and experience is glaringly

>apparent in this statement. First off, the first

>programmable scanners came out in the late

>70's. Look into the Bearcat 101, the SBE

>Optiscan, the Regency "Whamo 10" and the

>Tenelec.

>My Bearcat 210xl was purchased in 1980 or

>81, and you can clearly see it in the pictures of
>my station in 1985 and 1990 as shown on my

>website.

>Secondly cordless phones were not on 27

>MHz (What idiot would put cordless phones on
>the already crowded CB band?).

The same type idiot that comes out here pretending he knows all kinds of things about all kinds of things, but knows jack shit intimately.

www.affordablephones.net/HistoryCordless.htm

LMAO,,the feds did it, genius. They most certainly WERE on 27 in their beginning.
The 1st 49 MHZ came about in or around 1986. Talk that smack, David.

>generation cordless phone was on 49 Mhz

(Snip)

As usual, your lack of knowledge of the subject was illustrated perfectly. Such lack of knowldge of the subject prevents you from discussing it further.

>If the FCC or the phone lobby doesn't want

>people listening in, they need to block out

>those frequencies or scramble the

>transmissions.

Then the same logic can be applied to use of the freeband.

> How?

The method was your idea. The fact that you once again speak before thinking is illustrated by no one better than yourself.

_
It was always
a crime to eavesdrop on one's private telephone conversation using electronic equipment, David. It violates federal wiretap law, but your position of "thinking like a criminal" (your words) is interesting.

>Wire tapping did not apply to radio devices at

>that time.

It was still considered a telephone and as such was subject to the rules and regulations governing telpephones..

>That was the glaring loophole in the wiretap

>law.

No loophole at all, just another wrong claim from you.

>There could be no reasonable expectation of

>privacy when you run unencrypted analog FM

>signals over a band that is generally easy to

>receive by "common" radio receivers (Such as
>a scanner).

One's expectations of privacy has nothing to do with the law, David.

>Again, prove me wrong if you can (But I won't

>hold my breath).

I've proved you wrong so many times with radio law that it's downright dandy giving you the cord and watching you so eagerly jump to wrap it around your neck. You are so quick to jump these days that you rant on about things you have no clue.
Please tell us more of what you do not know, David. You get real funny in these episodes of which you are made to perform and demand.

>I am more than willing to post the links to the

>ECPA, showing the date that it became

>.effective and what it covers.

Try reading what applied to your situation, not what you think gave you permission to violate the law.

>.The ECPA is what specifically addresses

>wireless phone devices.

Ignorance is no excuse for breaking the
law. If you are going to break the law, you should at least be educated about the law you break and penalties you face.

>Remember that each time you run your

>unlicensed transmitter on the freeband.....

My Ten-Tec needs no license or acceptance. See, this is another example of your piss poor retainment skills, as you have been informed on repeated occasion that as an extra, you ought know such things, but then again you are the deviant exception to hammie ops, not the norm.

>David T. Hall Jr.

I co-phased a set of copy-cat Monkey Made MM-9 on the pickup truck. Sorta dwarfs the 1/2tnXtd cab full size Chev but they loook pretty decent on them. I can get out fairly good but the 35 watt added really makes a difference. I found a Red Devil 350 that I may put on it just to sit out in the truck at night when skip is running and try to shoot some of it.

I don't know if the RD has a high low isde to it or not but if one cuts voltages down will that burn the amp up or will that just decrease the wattages of the kicker?

Hello, John

6 meters is an interesting band, however it has never had the popularity of other bands from 80 to 2 meters. If you are in a fringe zone for channel 2 television, you will find out why.

Forget the hams; when you get a number of channel two television watchers complaining to the FCC as well as to the channel, you will find out exactly why it has never been as popular as other bands (best include 440 as well).

Not even the properly licensed hams have been able to deal with that with a lot of success (a few, yes, but ....).

Hello, John

You are missing something. Start a "club" or whatever. Have folks send you money to go after the nasty folks! Charge only 10%. If no one is caught, simply refund the other 90%.

You should make a fortune and laugh all the way to the bank :))

As long as you put the "agreement" forward in proper legal language, you should be set. As good as winning the lottery.

Look at the idiots selling the "male enhancement" stuff on the Internet and television!

I'd even be your cheering section! For a very modest fee, of course ;)

Hello, John

How about the loud radios? Certainly not a felony, but I had a problem.
Please note the use of the past tense.

After complaints to 911, I simply downloaded a few of my favorite MP3s

The Washington Post March
Anchors Aweigh
The Stars and Stripes Forever

A few more, but with several hundred watts of available audio with a *huge*
sub-woofer and a promise to the police that I was about to retaliate in
kind, I haven't heard a peep in about 3 months.

HAHAHAHAHAHA!!!

With all due regards from Rochester, NY
Jim

John

There is meter readings and there is meter readings. One thing that
meter readings can't get around is physics. Besides I place about as
much trust in s meters on receivers as a sreeen door in a submarine.
Nice gadget to make it look as if the receiver is doing something but
for field density measurements they are worthless.

Actually the difference from 35 watts to 100 watts is far less than
that from 5 to 35 watts. In fact the difference from 35 watts to 100
watts is really just discernable. To make a real noticable difference
the power level has to go up by four times. Five to 35 is seven times.

Besides I never stated that 35 watts was going to knock doors off. I
just stated that 35 watts compared to 5 watts is far more noticable
than you give credit for.

The FCC can bring far more equiptment to bear on a case than most
local hams. Once a case is opened by the FCC they will find a pirate
radio station. Even mobile operations is not a security blanket. It
just may take longer. For the FCC time is on their side. Maybe not
money but time is.

230. Re: will 6 meters be the next freeband what is your input

Newsgroup: rec.radio.cb
Date: 2005-06-07 01:03:47 UTC
From: james <george@washington.edu>
Message-ID: <5hs9a1t27qibvgqaspn25uljrffbdri9ol@4ax.com>
Source record: 201117

Actually the 6 meter amamture band was carved out of the TV band. It
used to be channel 1. Back when TVs had an IF of 21 MHz. When TVs
moved up to 45Mhz IF, channel 1 became a nigh tmare for the receiver
local oscillator. So the 6 meter amature band was created.

Y es living in areas where there is a channel 2 station is problems.
Generally precludes that you keep power levels under 50 watts.
Sometimes under 20 watts. Does play havoc for local ragches, but even
20 watts on 6 when it opens is more than enough on 80% of the time. I
have made transmissions from Ft Lauderdale to New Orleans with 3 watts
and a 60 inch whip antenna. I have even been heard in a DX contest
with that same setup.

Yep 6 meters is what the CB band was about 40 yrs ago. Nice and quite.
30 watts and you were a loud station.

CB and ?Ham are rather different. For Ham (Amateur), you will need to pass an exam. For CB, there are no tests.

> I have not even invested in a radio yet questions
>
> Should I buy secondhand if so from where is the best place?
>
> Is Ebay.com really a good idea?

I would be careful of EBay, many people really do over-price things. They know that someone new
to CB will come along and, having no idea of the real value, pay that silly price. Sometimes it
can be cheaper to buy new.

First of all, take a look at some shop prices, even if through Internet CB shops, so you know
the real prices of new equipment.

> Could you tell me is AM or FM the legal freq in the UK and Ireland
> and if so which most active used nowadays?

Republic of or Northern?

In the UK, there are two bands that are legal for CB use. We have our own band of 40, plus the
standard European 40. In the ROI, the UK 40 is not allowed.
Both UK and ROI allow FM.
UK does NOT allow AM or SSB, but I am unsure of ROI.

In the UK, CB use is patchy. Where it is used, our UK specific channels are usually the most
popular. However, our most popular radios are probably the 80 channel models, so most people
will have both bands.

> Whats the best kit to buy what President Lincoln Radio by Uniden like?

Rather illegal for CB use, they only get into the UK because they are marketed as "Amateur" equipment.

For more info about CB in the UK, check out my Web site:
http://www.citizensband.radiouk.com/

For rules relating to ROI, try this:
http://www.comreg.ie/

Regards,

Peter.

Of course you can. There's nothing wrong with your ability to
comprehend. You're not an idiot.

Once in a while we sometimes have trouble putting our thoughts into
comprehensible words. And sometimes others have trouble understanding
what it is that we try to say. That's to be expected. But with some
people it's more the rule than the exception......

BTW, how was Dayton?

The adjective was used to describe the nature of the conversation. The
age of the participants is irrelevant. Feel free to insert your own
adjective if you wish.

>> It reflects in no way how I personally reacted
>>to it.
>
>
>
>No one claimed differently. in fact, you probably jacked off to it

No, in your own dirty little immature mind, you might think that. But
the "fact" is much different. Wasn't it Al Bundy who once said "Why go
out for milk when you have a cow at home?"

>, but
>not one tried claiming how you reacted to it. You invoked how you felt
>about it. You found such talk "juicy".

So would anyone else who happened to hear it, so what?

Trying to get you to comprehend is like teaching a pig to dance. A
fruitless prospect. But it is fun watching you apply your demented
mind to simple sentences.

>You were not a minor when you spoke of such acts being "juicy".
>
>>No, but I was no more than about 22.
>
>
>
>You lie. You made the post a few years ago and called the act "juicy".

A few years ago, I posted about something that I did when I was 22. I
also post quite often about my experiences on CB back in the 70's.
Does that mean that I did it at the exact time I posted it?

>>In fact, my wife is 3 years younger than me.
>

>And her middle name begins with T and she lived at 1819 Gravers Road in
>Plymouth Meeting, a (according to your definition) suburb of Norristown
>that appears when plugged into google maps,,remember,,,,,it was that
>thing you said you tried but it gave you "nada" results.

You said 1819 Gravers road in Norristown. There is NO Gravers road in
Norristown. Plain and simple. It does not show up in either Mapquest
or Google. Now had you been more accurate in your information, and
given me Plymouth Meeting (Which has it's own post office and is a
town in it's own right) then it might have worked. Don't blame me for
YOUR error.

My wife never lived there, nor does her middle name begin with "T".
You are wrong yet again (A pattern for you).

>>So what of it?
>
>ï¿½Now, the moral -majority- of people would find it disgustingly

>You weren't 22 when you described the act you performed.

No, but I was when I actually partook in it.

> You said it in
>your post only a few short years ago, and I quote, that their "talk of
>sex was "juicier" than Melrose Place", which came on in the nineties,
>when you were well into your thirties.

So you believe that a person cannot take two elements from different
times and compare them at a later date?

I can't talk about my 1967 Mustang in the same sentence as talking
about my current rides? I can compare the state of CB radio today to
what it was like 35 years ago?

Are you THAT mentally impaired?

>Just for the record, you did not
>claim the act of eavesdropping on these minors was "juicy" when you did
>the act, you said it a few short years ago. Yet, you entertainingly
>think yourself as part of some imagined moral majority. Any majority of
>moral people would not describe the act of eavesdropping on minors

>perv and your problems are all over these pages.

I'm not the one accusing other people of masturbation, of dressing in
drag, or talking about abhorrent sex acts with other men. That would
be reserved for you at various times and posts. So tell me again who
the "perv" is?

ï¿½
>>Again, the word describes the tone of the
>>conversations.

>Normal moral adults would disagree with you, David. Normal moral adults
>would not find such "tones" of minors as "juicy". And again, the term
>denotes -your- interpretation of sex talk by minors as such.

Moral adults would not be operating unlicensed transmitters on
unauthorized frequencies, and then incorrectly use the term "civil
disobedience" in a vain attempt to ease what little conscience they
might have.

>>At no time did I claim that it "got me off" or
>>affected me in any other way other than
>>psychological curiosity.

>Of course you did, you caled it "juicy". Please do not embarrass
>yourself again by misleading yourself that anyone at all would believe a
>young man of the age you speak would consider any psychological factor
>concerning such talk.

You don't know me very well (after all this time) do you? Why do you
think I bother responding to you at all? Do you think I do it because
I feel that you are a person of influence, or that the things you say
have some intrinsic value? LMAO! If so, then you really are as
narcissistic as I've thought.

No, I do it for the psychological entertainment value that you provide. I love watching you bend even the most straightforward statements into convoluted fragments of the truth. I love watching you lie, and then back pedal to cover it up. I love driving you to dig up information about me, and end up getting much of it wrong, yet accuse ME of seeking information about you. This is greater entertainment than watching Homer Simpson say "Doh" for the hundred thousandth time. I've always enjoyed watching the human experience. Who needs scripted "reality" TV when the real world is your stage and regular people are here to perform, and all without scripts (But maybe with a little prodding). It also gives me insight into how people think and what things are important to them. Just like Dr. Jane Goodall studies primates in order to understand their social interaction, I do the same for humans. Informally, but it's fun watching people react predictably to programmed stimuli. On that note, you have never failed yet.

>tweaked you with your own offensive acts.

No, actually it hasn't. You are the only one who sees fit to mince words, twist meanings, obfuscate the truth, make disingenuous statements, and project your failings on to others. Nothing is more laughable (To the point of tears sometimes) than to hear you go off on other people and accuse them of having "communications deficits" when it is clear to anyone who's been here for more than a few weeks that it is YOU who can't seem to grasp the straight meaning.

It's no wonder you fall for liberal propaganda. In your convoluted mind, their logic probably makes sense.

>have no clue their definition.

I never use a word that I do not know the definition of. You have tried to make an issue of my vernacular, or grammatical usage, but in every case, I have provided the definitions of the words to support my usage. Your predictable response has always been to attack my source. Since I started using internet dictionaries, it becomes harder for you to claim that I am "lying" about it as it is easily verifiable by anyone who cares.

> For countless examples of you not

>>from Radio, to practical matters.

>Which does not excuse your deficit.

You mean YOUR deficit.

>>YOU are the only one who does not
>>understand me,
>
>
>You told Frank he couldn't understand your politics.

People will argue politics until the cows come home. Both sides claim to have the "facts", while accusing the other side of "propagandizing". All I tried to do with Frank, is to show him that his political beliefs were based on no more credible information than mine were. Even after he hypocritically tried to discredit my sources as "propaganda" while offering up his own propaganda (Which he claimed to be "fact") as proof of such.

All he had to do was say that he believes what he wants to believe, based on his own intrinsic core values. But instead he tried to walk the intellectual high road. But all I have to do is hold up a mirror to every claim he makes at me, and the same rules apply right back.

> You said Shark
>couldn't understand the laws in your state because he didn't live there

Well yea, how can someone who doesn't live here have any experience
with the process of the LEO's here? I admit quite readily that there
are many laws in California that I am not familiar with. I have no
reason to be. I don't live there. There are many similarities, but
there are also differences.

>(a most ludicrous comment coming from the end we expect it most) after
>he produced proof that one can indeed et a speeding ticket in your state
>for going less than 5 MPH under the posted limit, despite your
>objections claiming otherwise.

What proof did he offer? He offered nothing but his own opinionated
claim that "a cop can write a ticket for anything if he wants", which
is a ridiculous statement to make. If the cop has any hope of having
that ticket stand up in court (Which he would have to appear at), then
it better be legitimate. All one would have to do is show up in court
with a copy of statute 3368, and the ticket goes away in most cases. I
posted the statutes that clearly define the speed tolerances that are
in effect in the Commonwealth of Pa. They clearly supported my claims
in the vast majority of cases, stopwatches and tailgating
notwithstanding.

So who are you going to believe, the opinion of an out of state
resident, professing a gut feeling, or the actual laws printed in
black and white?

You (and he) lost that one big time. Why you continue to bring it up
only shows the depths of your psychological problems.

>> and the reason for that is in you inability to
>>comprehend simple sentences.

>expressing difficulties. The ony common theme in ALL the posts, is you
>disagreed with each and every one of those of which you needed to seek
>clarification. This holds with your need for validation.

Your lying again. I have no trouble communicating with anyone. Anyone, that is, who has normal mental faculties. But during the course of communication, especially on technical issues, one often finds the need for some additional information, or clarification. It is far better, and much more polite, to ask for clarification than to assume a meaning when it is not clear or forthcoming. But that's been one of your primary problems, you jump to conclusions, often the wrong ones, rather than getting that clarification. Don't worry, we won't (can't) think any less of you if you can't understand what someone is trying to say. We'll try to speak a little slower next time.

>LMAO,,the feds did it, genius. They most certainly WERE on 27 in their
>beginning.
>The 1st 49 MHZ came about in or around 1986. Talk that smack, David.

Wrong. The first 49 Mhz (with 1.7 Mhz return) was on the market earlier than 1986, because I was listening to them long before then. I bought my Yaesu FT-757 in 1984 (I still have the receipt), and I used it to catch the cordless phone base frequency, while the Bearcat scanner was tuned to the initial 10 (Later upped to 25) 49 Mhz frequencies. In fact, you've just given me the inspiration for another article for my website. I'll provide all the details there.

It's a darn shame that the cordless phones came along when they did. They pretty much ruined the 49 Mhz band as an unlicensed hobby band. Prior to about 1982, there was a budding group of low power experimenters running 100 mW (And in some cases modified 6 meter ham gear) radios and trying to work DX there. When the phones and baby monitors arrived, that was the death knell for that band for hobbyists and experimenters. I still have my old Lafayette HA-240 on 49.860 Mhz.

The 46/49 Mhz phones (49 Mhz handset, 46 Mhz base) started around 1986. While I won't deny that the very first phones might have actually been on 27 MHz, I was not into listening to them then (It would have been a lot easier to do. Any modified CB could have done it). I don't think those early phones sold all that well. I never saw or heard one in my area.

>As usual, your lack of knowledge of the subject was illustrated
>perfectly. Such lack of knowldge of the subject prevents you from
>discussing it further.

My knowledge was from direct personal experience. I know you're too young to remember back that far, but the first truly legitimate cordless phones used 49 Mhz for the handset and 1.7 Mhz (Just above the AM broadcast band) for the base unit.

Find an old timer and ask them if you don't believe me.

>>If the FCC or the phone lobby doesn't want

>
>
>It was still considered a telephone and as such was subject to the rules
>and regulations governing telpephones..

Nope. There was no provision in any wiretap law at that time that
specifically addresses reception of cordless phones.

So by using your logic, if it isn't specifically called out as
illegal, assume that it is legal.

>>That was the glaring loophole in the wiretap
>>law.

>No loophole at all, just another wrong claim from you.

Then I'm sure you will provide the exact verbiage to substantiate your
claim?

The only thing I have been wrong on was the roger beep issue. And you
didn't prove that. I had to get the info myself from the FCC. As for
anything else, you're just blowing smoke.

Now, I'll say this as directly and as succinctly as possible so that
you will (hopefully) understand it. Please provide the exact verbiage
in the federal wiretap law, as is was around 1984, that specifically
addresses reception of cordless phones.

>>I am more than willing to post the links to the

>
>
>My Ten-Tec needs no license or acceptance.

True, for the amateur bands where authority to operate is granted to a
properly licensed amateur (Which BTW, are you one?), and type
acceptance of radio gear is not required. However, the radio is not
authorized to operate anywhere other than the amateur bands except by
license or authorization (such as MARS or CAP). Certain other bands
require type acceptance of radio gear. The land mobile service (which
is what the freeband was once part of) does (As does the CB band). So
your Ten Tec is not type accepted to operate on the land mobile band,
and you are not licensed as an operator on that band. That's two
strikes.

>See, this is another example
>of your piss poor retainment skills, as you have been informed on
>repeated occasion that as an extra, you ought know such things, but then

>again you are the deviant exception to hammie ops, not the norm.

You are the one who doesn't understand radio law. No matter how many time you spew your convoluted understanding of the law, it will not make it right. You are not authorized to operate a transmitter on the freeband without a license. It is not a band authorized by rule, therefore the operator requires a station license. If you don't have one, you are not authorized to run there, Period.

Then we would be no better morally, than the terrorists that we are
seeking to fight in the middle east.

Killing innocent lives through violence to front a cause seems to be
counterproductive. It's hard to gather sympathy and support for your
cause, when your "bombs" kill someone in another's family.

That's why, I believe, we will ultimately win in Iraq. The Iraqi
people are growing tired of the criminal element in their own society
carrying out these acts of violence, and they will (and are) help us
to eradicate them.

Yep, that's what it was all about. Good thing they moved the TV I.F.
from 21 Mhz, or transmitting on the 15 meter band would be a problem

I had an old TV that had channel 1. It had to be a 1950's vintage.
Long before UHF tuners were required.

>30 watts and you were a loud station.

6 meters has seen a bit of a revival of sorts. Thanks to cable and
satellite TV, TVI isn't near what it was before. Coupled with modern
radio designs which do a far better job at spurious output
suppression, RFI issues on 6 are a small percentage of what they once
were. I use 6 every day. A friend of mine has a repeater there, and I
run it when I commute. There's also some interesting DX that pops up,
especially at this time of year.

You claimed listening to underaged girls on cordless phones speaking
of sex was "juicy".

>An adjective used to describe the nature of the
>conversation.

Wrong,,,an adjective chosen by -you- to convey -your- interpretations of
sex talk by minors.

>The adjective was used to describe the nature
>of the conversation.

Only by perverts.

>The age of the participants is irrelevant.

Only to perverts. The mere fact that you feel normal moral adults would
find sex talk by minor underaged girls as "juicy" like you do, is way
off base.

>Feel free to insert your own adjective if you

>wish.

Perverted.

> It reflects in no way how I personally reacted

>to it.

No one claimed differently. in fact, you probably jacked off to it

>No, in your own dirty little immature mind,

LOL,,,you are the one finding sex talk by undeaged girls "juicy" David.
The dirty litle immature mind is all yours. Stop projecting your
deficiencies unto others.

> you might think that. But the "fact" is much

>different. Wasn't it Al Bundy who once said

>"Why go out for milk when you have a cow at

>home?"

The "fact" is you found sex talk of minors "juicy" and normal moral adults do not agree with you. Normal moral adults find such behavior troubling and of deviant behavior..

Not one tried claiming how you reacted to it. You invoked how you felt about it. You found such talk "juicy".

>So would anyone else who happened to hear

>it, so what?

You didn't "happen" upon it David, you went out of your way to obtain the conversation. And again, you're wrong. "Anyone else" would not describe sex talk between minor underaged children as "juicy". Only perverts like yourself.

>Once again you read more meanings in words
>than are actually conveyed.

But of course, David. This is your pattern. This is the part where you redefine what you really meant with the term "juicy" when eavesdropping on minors talk about sex.

>Trying to get you to comprehend is like

>teaching a pig to dance.

>A fruitless prospect. But it is fun watching you

>apply your demented mind to simple

>sentences.

Demented is a choice term to apply to an adult of your age who continues to refer to talk by children of sex as "juicy". Freak.
You were not a minor when you spoke of such acts being "juicy".

>No, but I was no more than about 22.

You lie. You made the post a few years ago and called the act "juicy".

>.A few years ago, I posted about something

>that

>I did when I was 22.

And you called it "juicy" a few years ago, and here you are now defending the term you used and reiterating that you indeed found such talk as "juicy". You appear to need another vocabulary lesson. The manner in which you used the term can have only two meanings: 1) Appealing; satisfying or 2) Interesting or colorful especially when slightly scandalous.
You're a freak who shouldn't be permitted around children unless other adults are present.

>I also post quite often about my experiences

>on CB back in the 70's. Does that mean that I

>did it at the exact time I posted it?

That whine is getting redundant.

>In fact, my wife is 3 years younger than me.

And her middle name begins with T and she lived at 1819 Gravers Road in Plymouth Meeting, a (according to your definition) suburb of Norristown that appears when plugged into google maps,,remember,,,,,it was that thing you said you tried but it gave you "nada" results.

>You said 1819 Gravers road in Norristown.

I said to -enter- "1819 Gravers Road Norristown" into google, but then again, your deficit is in full gear right now, brought on by your self-created stress and gaffes.

>There is NO Gravers road in Norristown. Plain
>and simple. It does not show up in either

>Mapquest or Google.

You are still having problems, David. I told you to enter the info into google, you said you did do that and that "nada" was returned. Now you are experiencing that great familiar pain that ails you when you fail with semantics.

> Now had you been more accurate in your

>information, and given me Plymouth Meeting

>(Which has it's own post office and is a town in
>it's own right) then it might have worked.

Norristown has its own PO also, yet, you insisted it was a "suburb" of Philly. In fact, you have confused yourself twice in the past by giving contraindicated information concerning what you mistakenly feel constitutes a suburb.
Sef-contradiction is a by=product of your incompetence. Don't blame me for YOUR error.
>My wife never lived there, nor does her middle
>name begin with "T". You are wrong yet again

>(A pattern for you).

>So what of it?

Now, the moral -majority- of people would find it disgustingly perverted that a man of your age

>22?

You weren't 22 when you described the act you performed.

>No, but I was when I actually partook in it.

You said it in
your post only a few short years ago, and I quote, that their "talk of sex was "juicier" than Melrose Place", which came on in the nineties, when you were well into your thirties.

>.So you believe that a person cannot take two

>elements from different times and compare

>them at a later date?

Most people grow up and those who would find such behavior involving minors speaking of sex would not find the talk "juicy" when they were in their forties, but you not only defend your interpretation of this behavior, you continue to insist talk of sex by minors in "juicy" to you. You have problems, David.

>I can't talk about my 1967 Mustang in the

>same sentence as talking about my current

>rides? I can compare the state of CB radio

>today to what it was like 35 years ago?

>Are you THAT mentally impaired?

Mentally impaired are those like yourself who find sex talk of minors "juicy". In fact, the majority of normal moral adults find your talk of such acts as quite disturbing.
Just for the record, you did not
claim the act of eavesdropping on these minors was "juicy" when you did the act, you said it a few short years ago. Yet, you entertainingly think yourself as part of some imagined moral majority. Any majority of moral people would not describe the act of eavesdropping on minors speaking of sex as "juicy" at your age. Get over it, David. You're a perv and your problems are all over these pages.

>I'm not the one accusing other people of

>masturbation, of dressing in drag,

When one of your age comes out here and invokes unsolicited claims to the world that you find talk between minors talking of sex as "juicy", what others accuse you of is the least of your problems.

>or talking

>about abhorrent sex acts with other men.

Ahhh,,,you and Dogie are the --only-- ones on this board who are preoccupied with queers and gays, as only you two consistently enter such into your conversations.

>That would be reserved for you at various

>times and posts. So tell me again who the

>"perv" is?

Adults who find talk of sex by minors as "juicy".

>Again, the word describes the tone of the

>conversations.

Normal moral adults would disagree with you, David. Normal moral adults would not find such "tones" of minors as "juicy". And again, the term denotes -your- interpretation of sex talk by minors as such.

>Moral adults would not be operating

>unlicensed transmitters on unauthorized

>frequencies, and then incorrectly use the term

>"civil disobedience" in a vain attempt to ease

>what little conscience they might have.

It's always been you who has problems with other's consciences. But there is no comparison to dxing and freebading David, when it comes to your sexual deviances. BBTW, you need to look up the term civil disobedience again, as you have no clue what the term entails, despite being informed on numerous occasions.

>
>Which translates to..... INFLATION!

Inflation occurs when the costs increase faster than the wages (an explanation simplified for someone with your level of education). Import tariffs actually -reduce- inflation for the very simple reason that the export deficits are reduced and more American money stays in America.

>If you want to pay $500 again for a VCR or DVD player, and $400 again
>for a decent CB (Like it was in the 70's not even accounting for
>inflation) then maybe this might appeal to you.

VCRs and CBs were expensive because of their popularity at the time, not because of inflation.

> But the problem is
>that the American public has become adjusted to receiving high
>American wages, while paying for cheaper imported goods. If the price
>of goods increases substantially, then the wages of the workers will
>have to jump to cover it.

You are assuming the premises that 1) the cost of imported products will "increase substantially", and 2) that there are no domestic substitutes for those products. Both are wrong:

The price of -any- product relies upon the laws of supply and demand. If you have a hammer made in China and a hammer made in the USA, the price is going to be the same because the market dictates the price. That's why it's called a "free-market economy". Imposing import tariffs increases the costs to the manufacturers of the hammers from China, but the price remains the same because the demand hasn't changed. But because of the increased cost to China the supply from China will be smaller. That reduction in supply is met with an increased supply of hammers from the US manufacturers, who are now relieved of some of the foreign competition. In the process, more Americans are hired to make those hammers, which, in turn, improves the economic status of not only the company that manufactures the hammers, but also of the community that benefits from the jobs and the government that benefits from the taxes. Everybody wins except China.

> When that happens the cost of corporate
>direct labor and overhead goes up, and they have to raise the price of

>manufactured goods to cover it. And the cycle of inflation repeats.
>Part of the reason why the rate of inflation has been so low for the
>last several years is due to the fact that the cost of goods had
>actually dropped as corporations tighten their belts and outsource
>more of their labor. Demand for higher wages has fallen, and inflation
>remains in check.

Wrong again. Inflation has been held in check by interference by the
Federal Reserve. Greenspan sets the prime interest rate to control
lending (which puts money into the economy), and with the buying and
selling of T-bills. Despite this, inflation -does- occur because the
major inflationary indicators are not perfect and the calculations are
usually flawed to some extent. But because of this interference, there
is no longer a free-market economy, and free-market economic models no
longer apply. So it's possible to have inflation and recession at the
same time, or have two or three economic markets operating independent
of each other. Regardless of it's unnatural complexity, the economy is
manipulated to the advantage of those that wield power over the
Federal Reserve. And regardless of the economic impact of import
tariffs, the Federal Reserve will control any inflation (to the extent
that it can be controlled), with the added benefit that the country
stops bleeding from huge export deficits.

>>but the overall effect is that the

>cheaper. Now, since the prices are fairly close, the perception of
>better quality that comes with the Japanese cars, has convinced people
>to abandon the "Buy American" motif, in favor of their own bottom
>line.

The price difference in the past had little to do with import tariffs
and much more to do with raw materials. That's why nowdays we cut down
our own trees, ship them off to foreign countries to be made into
plywood, which is shipped back and sold in the US for ridiculous
prices. This is a direct result of "free trade" with foreign
countries, not high labor costs in the US as many claim. Because of
these free-trade agreements, restrictions were lifted for raw
materials being exported but -not- for raw materials being used for

domestic manufacturing. Same deal with imported products. If you are
going to invoke the WTO to support your arguments then at least learn
something about the dirty deals the US has made in its benefit. I'm
suprised you haven't because Clinton made a few of those dirty deals.

>This example also speaks to your assumption of "superior American
>technology" and ingenuity. Don't look now, but we've been beaten at

Wrong. They also buy and sell T-bills, which either injects or removes
money from the economy, respectively. Regardless, the prime interest
rate controls the amount of money that is borrowed, and the amount of
money borrowed has a direct effect on the amount of money circulating
in the economy, even much more so than the buying and selling of
T-bills.

>>going to see hardly any of the money that comes from their own
>>resources -- instead it's going right into the pockets of oil company
>>fat-cats.
>
>I suppose I'm grasping at straws to ask that you back that up with
>something official.

US/UK ownership and control of Iraq's oil prior to Saddam (Iraqi Oil
Company, later known as Shell Oil) is well documented. Try Funk &
Wagnall's. The fact that Saddam reclaimed Iraq's oil was not only
documented by Western civilization but used as propaganda by Saddam.
He even tried to reclaim oil fields that were stolen from Iraq by
international charter long before Saddam took power (see Funk &
Wagnall's for the history of Kuwait). Only one month after the US
invasion, Philip Carroll, the former CEO of Shell Oil USA, took
control of Iraq's oil production for the US Government. By January
2004, a "state-owned" oil company was created by James Baker (former
Secretary of State, now an attorney representing Exxon-Mobil) that
favoured the US oil industry. Shell Oil (as well as several other US
oil companies) quickly established exclusive contracts with this new
Iraqi oil company.

Any more dumb questions that you could have answered yourself by using
the internet?

>
>Yes, that true, but the effect of those volcanos on the total climate
>is significant, and can disrupt the otherwise cyclic nature of the
>climatic shifts.

But only for a couple years, even for a really big volcano. The
current trend of global warming has been occuring for almost a
century. That's about as much disruption as driving over a pothole
while climbing a mountain pass.

>>I obviously know more about the subject than you, and there are

>holes in the evidence.

What holes? Humans -aren't- dumping huge amounts of greenhouse gasses
into the atmosphere? If not then where are those gasses coming from?
Not volcanos, that's for sure......

Dave, despite what you and most of the Republican party would like to
believe, there is indeed a consensus in the scientific community that
the global temperature is rising, and that we are the cause. The only
disagreement is about the degree of impact this change will have on
our civilization. Oh yeah, and what to call it: "global warming" or
"climate change".

>
>
>Led to, but not completely dependant on. Tree ring growth does follow
>a certain repeatable pattern relative to solar output.

Yes it does, Dave. It may be superimposed upon other climate changes,
but can be found just like a steady sine wave in a spectrum of noise.

> But there are
>still other factors which can influence them. A volcanic "winter" for
>instance, will deviate tree rings from the predictable pattern that
>would otherwise occur with a higher than normal solar output.

A volcanic winter does not change the cycle of the sun, only it's
effects, and usually only for a cycle or two.

Never used anything of the sort, and I invite you to post any argument
where you think such a fallacy was used by me.

>>. My offer to send you the Copi book still stands.
>
>I have far more reference material than that one book could ever
>provide.

Ah yes, the internet -- the "global pornography network"; the
"poor-man's library"; the "information superhighway"..... where any
kid with a computer and some pocket change can 'source' any tidbit of
mental popcorn, fact or fiction, knowing that some gullible retard
will eventually incorporate it into his or her "core belief" system.
Along those lines, I'm sure you have found the homepage for the Hudson
Institute, and if you really had any money I'm sure you be paying your
tithes to them on a monthly basis. But be careful of what political
ideologies you support, Dave -- you might end up getting drafted at
the spry young age of 60 after your neocon bretheren ever manage to
convince Bush that invading China is a good idea.

>>>>>>So once again I ask: Where are your facts, Dave?
>>>
>>>On the opposite side of the coin from yours Frank.

I don't know if there is a fallacy that is specifically named for
ignoring previously referenced sources, but if there isn't I'll call
it the "Dave Hall #1". That's to go along with the "Dave Hall #2"
fallacy which is best described as semantic backpedalling. And the
"Dave Hall #3", aka the "flip-flop frenzy" -- you are so desperate to
make your case that you forget your previous arguments and end up
contradicting yourself. I should make a list.

>>>>You have provided nothing of the sort in -any-
>>>>topic.
>>>
>>>I provide what is necessary. Like the PA state laws which back up what
>>>I stated about allowing at least 5 MPH over the speed limit in most
>>>cases when clocking speeders. It was comical watching you spin and
>>>twist, not much differently that Twistedhed, trying to find the
>>>smallest exception to those rules, in a vain effort to try to disprove
>>>the majority case. Talk about desperation.... Is your ego that
>>>shallow?
>>
>>

>
>Repeat marriages are not accounted for. So what? It is irrelevant.

No, it is -very- irrelevant. To prove (or disprove) that half of all
marriages end up in divorce then you must know how many marriages and
divorces occur in a given amount of time. You can't determine that
information from the static data you sourced from the Census bureau.
The data I provided was accurate, relevant, and, according to the
source of -your- data, came from -the- authoritative source on the
subject. My statement was correct.

>security"?

Not in those exact words -- you need to have enough brains to figure
out that when the SS trust fund gets tapped for spending on Republican
bills during Republican administrations, it's usually done by the
Republicans.

>>>>>>Bush's solution to SS is a "credit-card" retirement plan,

>

>Irrelevant. It doesn't change the truth of my statement.

Nope, it sure doesn't. You can call it "global warming" or "climate change", the "estate tax" or the "death tax", an "enemy combatant" or a "prisoner of war"..... it's all the same difference. So what liberal has stated that America should become a "welfare state" by that or any other name?

>>> Names like "living wage", "fair
>>>share", "universal care". But it basically means the same thing.
>>>Taking money from people who earn it, to give to people who don't.
>>
>>
>>LOL..... I think I'll let that statement stand on it's own 'merits'!
>
>Yea, the truth. But you wisely chose not to comment on it as the only
>thing you could do is defend the practices. That's sort of like
>defending the IRS. Not a very popular position to be in.

First of all, what you refer to as a "living wage" is mighty important to millions of voters who don't make a "living wage", mostly due to irresponsible Republican economic plans (not to forget that 40% of wage-earners don't make enough money to pay income taxes and therefore didn't get Bush's 'tax rebate' that turned out to be nothing more than a loan).

Second, "fair share" is in reference to fat-cats and corporations who skip out of paying taxes through shelters, subsidies and a variety of other carefully legislated loopholes.

And "universal care" is a simple concept that provides basic health care service for anyone whether they can afford it or not -- more specifically, the programs are targeted towards children whose parents work two or three of Bush's new jobs and still can't pay the rent, let alone health insurance for their children. It's also targeted towards the increasing senior population who will be SOL when the SS trust fund dries up in a few years (and after Bush shuts down drug imports from Canada).

Care to make any more assinine comments about those subjects?

>>>>>What part of 9.6% of the total population is divorced do YOU not

I explained this to you before -- read about Ivan the Terrible
(assuming you can find it on the internet). It probably also had
something to do with election fraud in Ohio and a few other states,
the extent of which will probably not be fully known until after the
Dems regain the WH.

>>not always right.
>
>Majority rule is always right in the context of the time it is
>enacted.
>
>During the time of slavery, the majority believed it was an acceptable
>practice.

Wrong. There was bitter debate about slavery during the Constitutional
Congress. The reason slavery was left to the states was because they
felt that unity was far more important than slavery. The issue was
ultimately resolved during the Civil War, but existed long before.

> Eventually the majority changed their belief and decided
>that it was no longer an acceptable practice.

Wrong again. The 'majority' prior to the Civil War included only white
male citizens. After emancipation the 'majority' suddenly included

blacks as well as whites, and a much better representation of the majority could be counted (although still not very well until after the Fifteenth and Nineteenth Amendments, and the civil rights movement of the 1960's).

>In no time in recent history has the minority successfully bent the >will of the majority on major issues.

Again, wrong. You claim that a majority of people wanted Bush to be president, yet only 30% of registered voters actually voted in the election (some of them not voting because they were prevented from voting, with the Supreme Court declaring that citizens do -not- have any right to vote). Just 15% is not a "majority" by any stretch of the imagination.

Enough with the semantics, Dave -- address the facts.

> Change occurs when the majority
>recognizes that the time is right for a different direction. It is not >a sudden thing, rather it is a gradual transition. Liberals have been >attempting to affect political and social change through the >indoctrination of young people and by the dissemination of liberally >biased news for some time. Fortunately, events such as the rise of >talk radio, the ability of people to seek alternative news sources >through the internet, and exposure of some of the purveyors of liberal >bias, has slowed down, if not reversed, this trend.

Oh good God -- you've been brainwashed, Dave. Either that or you're a bona-fide paranoid. Get some professional help already.

David T. Hall Jr. (N3CVJ) wrote:
Of course you did, you caled it "juicy". Please do not embarrass
yourself again by misleading yourself that anyone at all would believe a
young man of the age you speak would consider any psychological factor
concerning such talk.

>You don't know me very well (after all this

>time) do you?

I don't know you at all, David, but your claims of where you find your
fun, such as eavesdropping on minors speak of sex, are quite bizarre,
especially when you are in your forties and continue to defend such
practices and refer to the emotions you experience as "juicy" when
speaking of the act.

>Why do you think I bother responding to you

>at all?

You're my command performance, David. The "whys" are irrelevant except
only to yourself, which has been reiterated, solidified and illustrated
by yourself on numerous occasion by expressing your concerns over
internet stranger's behavior off-line.

>Do you think I do it because I feel that you are

>a person of influence, or that the things you

>say have some intrinsic value? LMAO! If so,

>then you really are as narcissistic as I've

>thought.

The world knows how you think, David, and it's quite troubling and
upsetting to those of us who are concerned for the welfare of our
children. Anyone who is mixed up with confused emotions and finds talk
of sex by minors as "juicy", well, it doesn't matter at all what people
like that (you) think. You're on the bottom rung of the evolutionary
ladder.

>No, I do it for the psychological entertainment

>value that you provide. I love watching you

>bend even the most straightforward

>statements into convoluted fragments of the

>truth. I love watching you lie, and then back

>pedal to cover it up. I love driving you to dig up
>information about me, and end up getting

>much of it wrong, yet accuse ME of seeking

>information about you. This is greater

>entertainment than watching Homer Simpson

>say "Doh" for the hundred thousandth time.

>I've always enjoyed watching the human

>experience.

As Frank alluded, you look to the inorrect mediums for your information.
Homer Simpson is not real, David, but watching you cling to desperation
and refer to such as "human expereince" tells all.

> Who needs scripted "reality" TV when the real
>world is your stage and regular people are

>here to perform, and all without scripts (But

>maybe with a little prodding). It also gives me

>insight into how people think and what things

>are important to them. Just like Dr. Jane

>Goodall studies primates in order to

>understand their social interaction, I do the

>same for humans. Informally,

You mean uneducated.

> but it's fun watching people react predictably

>to programmed stimuli. On that note, you have
>never failed yet.

>Anything other than what I have just said, is

>purely your imagination running amuck.

Your words and actions speak loud and clear to the world, David, as only
you have this incredible belief only you can see yourself as you really
are and that you are misunderstood to the point that you need reiterate
and explain yourself to each and every person you disagree.

>.If someone is a thick and with the incredible

>comprehensively challenged as you are, I

>guess I do have to explain everything in

>simple basic terms.

Which you have demonstrated throughout your posting history with all you disagree, David. Your errant behavior began long before I came along and tweaked you with your own offensive acts.

>No, actually it hasn't.

Since you admitted incompetence with google, I suggest you get some assistance by someone you trust and feel isn't against you all the time. Try it again,,,,google, enter "Sandbagger" and "You mean" and you will indeed find your behavior began -long- before I entered your world illustrate your impotence and ignorance.

> You are the only one who sees fit to mince

>words, twist meanings, obfuscate the truth,

>make disingenuous statements, and project

>your failings on to others.

Tell the world what "juicy" means to you, David.

>Nothing is more laughable (To the point of

>tears sometimes) than to hear you go off on

>other people and accuse them of having

>"communications deficits" when it is clear to

>anyone who's been here for more than a few

>weeks that it is YOU who can't seem to grasp

>the straight meaning.

Wow,,you really are on the offensive today, David. Truth always sets you on the attack, but you can not distance yourself from your problems, they follow you everywhere, but please, feel free to continue to blame everyone who disagrees with you.

>It's no wonder you fall for liberal propaganda.

>In your convoluted mind, their logic probably

>makes sense.

That's what you said to Frank. Once again, your idiocy is always the other person's fault.

>Otherwise you garner meanings that do not

>exist and assume something that was not

>expressly conveyed.

"Juicy". So go ahead...'splain! LMAO!
You plead and plead that everyone misunderstands you David,

>I have never claimed that "everyone

>misunderstands me"

Sure you have, David, You do it in the manner of attempting to explain away "just what you really meant" after manking a post using words you have no clue their definition.

>I never use a word that I do not know the

>definition of. You have tried to make an issue

>of my vernacular, or grammatical usage, but in
>every case, I have provided the definitions of

>the words to support my usage.

You have also been properly taught the use of "forensics" when you misapplied it and claimed your work with radios is much like forensics. You needed taught the term connotates a legal relation. So go ahead and explain, how even in the most remote manner, your radio work is even remotely "like" forensics.
Your predictable response has always been
to attack the source.

>internet dictionaries, it becomes harder for you
>to claim that I am "lying" about it as it is easily

>verifiable by anyone who cares.

Believe whatever your damaged ego needs, David. Watching you talk smack about nothing you understand is extremely "verifiable" to most, as most don't need internet dictionaries, only you. The athetic part is, you still fuck up the definitions and need to come out and apply your own definitions and tell the masses what you "really meant".(snicker). You have always had the greatest difficulties in conveying exactly what you mean, and as I said, google confirms your problems with this long before I ever tweaked your already problematic psyche.

_
For countless examples of you not
understanding the majority of people you disagree, one merely needs google "sandbagger" and the words "you mean". Cripes, there is enough reading for even the most remote layperson to get a handle on your communication deficits.

>.There you go again, projecting your own

>faults onto me.

I'm not in the majority of those posts, David. There are tons of posts of you expressing communication difficulties, begging ALL you disagree "just what they mean".

>Google "Twistedhed" and "Lying" and see

>what you come up with.

Now THAT statement illustrates perfectly just how short the string is
you are attached and how clueless you are.Not only is your deficit
rampant, you are unable to keep track with just who you blame for your
misery.

>as I have given many people good advice

>from Radio, to practical matters.

Which does not excuse your deficit.

>You mean YOUR deficit.

I'm not the one whose posts are peppered with beg after beg seeking
validation and clarification..those are all yours.

>YOU are the only one who does not

>understand me,

You told Frank he couldn't understand your politics.

>People will argue politics until the cows come

>home. Both sides claim to have the "facts",

>while accusing the other side of

>"propagandizing". All I tried to do with Frank, is
>to show him that his political beliefs were

>based on no more credible information than

>mine were. Even after he hypocritically tried to
>discredit my sources as "propaganda" while

>offering up his own propaganda (Which he

>claimed to be "fact") as proof of such.

>All he had to do was say that he believes what
>he wants to believe, based on his own intrinsic
>core values. But instead he tried to walk the

>intellectual high road.

There is the pattern that affects you. Most everyone walks the
"intellectual high road" compared to you. This is where your
self-degradation comes in to play, as other's intellect has always been
deeemed a threat by yourself, especially when you disagree with a poster
and it is shown you are wrong. You have always expressed a great
difficulty in accepting you are wrong. If you knew half of what you
think you do, this would be a catalyst for you,,a wakeup call, but as
one in their forties who continues to call sex talk among underaged

girls as "juicy", what you say is on the level of sexual deviants.

>But all I have to do is hold up a mirror to every
>claim he makes at me, and the same rules

>apply right back.

It's not about rules, David, as you have never practiced the golden rule. You can not select which rules apply to others and that has always been one of your major malfunctions. You seek status and were denied it among these pages, even after you demanded respect by virtue of your hammie license....such clamoring for respect turned to foot stomping and demands
and you have never been the same.
You said Shark
couldn't understand the laws in your state because he didn't live there

>Well yea, how can someone who doesn't live

>here have any experience with the process of

>the LEO's here?

David, the laws in Pa are a separate subject than those charged with adminstering them. Shark said nothing of the LEO's process, those were -your- unsolicited, unproved, and steadfast refusals to substantiate anything you invoked. One can most certainly understand the laws in your state with education. Shark educated himself and -you- concerning the laws in your state that -you- said were explained to you by LEOS you refuse to name or substantiate, yet you beg others to substantiate for their claims. In fact, you always invoke unsolicited claims of grandeure when referring to yourself. Steadfast refusal to provide for all your unsolicited claims while you beg others for the same, well, ...anyone can see that your refusals to provide for your claims to all who ask is another in a lng line of failures you present.

>I admit quite readily that there are many laws

>in California that I am not familiar with.

and Shark showed there are laws in your own state of which you are not familiar, and neiher are your phony LEOS.

> I have no reason to be. I don't live there.

>There are many similarities, but there are also

>differences.

No one mentioned California law, David, except you.
Shark produced proof that one can indeed et a speeding ticket in your state for going less than 5 MPH under the posted limit, despite your objections claiming otherwise.

>What proof did he offer?

Work on that retainment value, David. You are the only one that can take self-denial and morph it into a belief system to protect your already fragile psyche.

> He offered nothing but his own opinionated

>claim that "a cop can write a ticket for anything
>if he wants", which is a ridiculous statement to

>make. If the cop has any hope of having that

>ticket stand up in court (Which he would have

>to appear at), then it better be legitimate. All

>one would have to do is show up in court with

>a copy of statute 3368, and the ticket goes

>away in most cases. I posted the statutes that

>clearly define the speed tolerances that are in

>effect in the Commonwealth of Pa. They

>clearly supported my claims in the vast

>majority of cases, stopwatches and tailgating

>notwithstanding.

No one ever took issue with the "majority" of cases in Pa. only the one of which you were wrong. You said a cop can not issuea ticket for going less than 5 MPH,,,you were wrong.

>So who are you going to believe, the opinion

>of an out of state resident, professing a gut

>feeling, or the actual laws printed in black and

>white?

Certainly not you, David, You have more excuses that Carter had liver pills regarding your unsolicited claims. You invoke LEOS on your own free will, to the extent of claiming them as personal friends of yours. When it was shown they gave you erroneous information, you attacked the poster, not the information. You invoked schooling, as you felt it important enough as to lend credibility of which you lack, yet when you are asked to provide for all your claims, all you do is attack those who illustrate your lies and bullshit. You pattern has never changed David. You are full of shit, you are a habitual liar, and you have no formal education in anything you claim. In other words, the majority of your claims have been decimated and found to be lies utilizing -your- unsolicited yet often invoked "statistical probaility" factor.

>You (and he) lost that one big time.

No David, there is jo win or lose on usenet David, and as Frank atutely illustrrated, your life is so incomplete, you need to tune in here for your challenges,as you take them where you find them.

> Why you continue to bring it up only shows

>the depths of your psychological problems.

Gee David, if you managed to provide for any of your claims, your self-delusions of grandeur
and selfqualifications may have had an air of validity, but self-validation is only done by those who have self-image and confidence problems, whihc would explain your need for redundant and unsolicited claims concerning yourself.
One reason for that is in your inability to
comprehend simple sentences or apply proper definitions to words.
Actually David, and I'm not the only one who has pointed this out to you, it's because you misuse words of which you have no clue their definition.

>.Name them.

Already named several.

>And in the proper context in which I used

>them.

There was no proper context in which you used them..that's the gist of your problems.
 This is probably why there are so many posts with you not comprehending what others say to you. LOL..again try the google with your words "Do you mean" or "did you mean". The number of posts made by you seeking clarification to other's words are numerable, yet, your knee jerk reaction is to blame another. Do the search David, it's not the "other", it's you all throughout your posting history who can ot comprehend what others tell you. Despite your paranoia, it's not just me David, there are many many others in those returns which have you expressing difficulties. The ony common theme in ALL the posts, is you disagreed with each and every one of those of which you needed to seek clarification. This holds with your need for validation.

>Your lying again.

Yea, well, denial ain't a river in Egypt and only you have admitted to being confused and not
knowing how to use google.

>I have no trouble

>communicating with anyone. Anyone, that is,

>who has normal mental faculties.

But of course,,,all those people you disagreed with in google and beg clarification have the problems, not you.

> But during the course of communication,

>especially on technical issues, one often finds

>the need for some additional information, or

>clarification.

No David, not "one",,-you-. You are the -only- one among this group whose posts are rife with posts begging people to explain what they really "mean" as you have a most difficult time communicating with all those you disagree. It's your character flaw, David, and you are unable to get a grip on it.

> It is far better, and much more polite, to ask

>for clarification than to assume a meaning

>when it is not clear or forthcoming.

It's clear to all in the google history except you, as -you- are the -only- one beggin people to clarify what they said, as -you- have a most extreme difficulty in comprehending the majority of people with who you disagree.

>But that's been one of your primary problems,

>you jump to conclusions, often the wrong

>ones, rather than getting that clarification.

Don't worry, we won't (can't) think any less of you if you can't understand what someone is trying to say. We'll try to speak a little slower next time.

>It was not illegal at the time I was engaged in

>listening.

It was. This is another area concernig the law of which you are extremely ignorant.

>.There was NO law preventing interception of

>cordless phones in the 1980's. None, nada,

>zilch. Prove me wrong if you can. And I'll laugh
>at your attempts.

You've been proved wrong, such as on the roger beep issue, and most -have- laughed at you, David.

>.The roger beep issue does not equate to, or

>.bear any relevance to the ECPA and cordless
>phone reception issue. Your attempt at

>.deflection is duly noted.

It stands with the familiar theme of you not knowing the laws.

261. So Dave.....

Along the lines of JFK's speech, what did -you- do for your country?

Do you have any problem with a Constitutional amendment that
guarantees every citizen the right to vote?

Have you learned anything about HJR 28?

Do you think that the Supreme Court Justices are just a bunch of
"activist judges", or that their decisions are written by some
"skilled left wing propagandist"?

Have you learned the difference between an analogy and a metaphor?

Did you read the law that prevents you from falsely crying fire in a
crowded theater?

Have you learned anything about the Constitution? Enough to know how
an Amendment can be made? What the First Amendment means? Where the
phrase "seperation of church and state" comes from?

Have you found a majority of Americans that are willing to give up the
Constitution?

This is a great URL to a linear kit:
http://www.communication-concepts.com/eb104.htm
This is a nice size and power rating and economical to build...

It is great seeing so many CB'er building their own equipment these days. I find more and more that the CB'ers are more like the hams used to be....

... of course such equipment is illegal within the USA, and best used in international waters....

Warmest regards,
John

David T. Hall Jr. (N3CVJ) wrote:

>Any scanner user could do it.

No David,,the last time this was brought up, you tried and failed with this excuse. When it was illustrated what a pervert you are, you come back with the defense that the incident occurred years and years ago, when you were a younger man. It appears you can remember vividly the details of such an incident that many years ago, but can not recal a simple Phelps antenna when inquired of a comment you made a few year's previous alluding to such. Nevertheless, back when you were that young, the scanners were not digital, but crystals, and contrary to your claim "any scanner user could do it", that simply was not the case back then. In fact, cordless phones came on the market in 1980 and were ALL 27 MHZ phones, a specific crystal that did NOT come imbedded in "any scanner". All of this coupled together with your oft-invoked "statistical probablility" factor, makes you to be one big freegin' liar! LMAO!

>Your lack of age and experience is glaringly

>apparent in this statement. First off, the first

>programmable scanners came out in the late

>70's. Look into the Bearcat 101, the SBE

>Optiscan, the Regency "Whamo 10" and the

>Tenelec.

>My Bearcat 210xl was purchased in 1980 or

>81, and you can clearly see it in the pictures of
>my station in 1985 and 1990 as shown on my

>website.

>Secondly cordless phones were not on 27

>MHz (What idiot would put cordless phones on
>the already crowded CB band?).

The same type idiot that comes out here pretending he knows all kinds of things about all kinds of things, but knows jack shit intimately. www.affordablephones.net/HistoryCordless.htm LMAO,,the feds did it, genius. They most certainly WERE on 27 in their beginning.
The 1st 49 MHZ came about in or around 1986. Talk that smack, David.

>Wrong. The first 49 Mhz (with 1.7 Mhz return)

>was on the market earlier than 1986, because

>I was listening to them long before then.

Sure, David,,"the info is wrong" again, eh?
Instead of relying on the compiled history of the phones, one should rely on you....after all, your memory has proved astute regarding such things that normal ops remember, such as antenna brands they used over the years.

> I bought my Yaesu FT-757 in 1984 (I still

>.have the receipt), and I used it to catch the

>cordless phone base frequency, while the

>Bearcat scanner was tuned to the initial 10

>(Later upped to 25) 49 Mhz frequencies. In

>fact, you've just given me the inspiration for

>another article for my website. I'll provide all

>the details there.

Ah,,,so you were wrong claiming the first phones were 27 MHZ and I was wrong concerning the first programmable scanners..at least I can admit it. The pain you are experiencing over being wrong will go away as soon as you can accept it and move on from it instead of dwelling on it like you do so often.

>It's a darn shame that the cordless phones

>came along when they did. They pretty much

>ruined the 49 Mhz band as an unlicensed

>hobby band. Prior to about 1982, there was a

>budding group of low power experimenters

>running 100 mW (And in some cases modified

>6 meter ham gear) radios and trying to work

>DX there. When the phones and baby

>monitors arrived, that was the death knell for

>that band for hobbyists and experimenters. I

>still have my old Lafayette HA-240 on 49.860

>Mhz.

>The 46/49 Mhz phones (49 Mhz handset, 46

>Mhz base) started around

>1986. While I won't deny that the very first

>phones might have actually been on 27 MHz,

You already denied it, David. Something is very wrong with you.

> I was not into listening to them then (It would

>have been a lot easier to do. Any modified CB

>could have done it). I don't think those early

>phones sold all that well. I never saw or heard

>one in my area.

As usual, your lack of knowledge of the subject was illustrated perfectly. Such lack of knowldge of the subject prevents you from discussing it further.

>My knowledge was from direct personal

>.experience. I know you're too young to

>.remember back that far, but the first truly

>legitimate cordless phones used 49 Mhz for

>the handset and 1.7 Mhz (Just above the AM

>broadcast band) for the base unit.

Wrong. The first available cordless phones were 27 MHZ.

>Find an old timer and ask them if you don't

>believe me.

You're the one claiming the info is wrong, David, but that burden of providing for your claim is always to great a cross for you to bear.

>If the FCC or the phone lobby doesn't want

>people listening in, they need to block out

>those frequencies or scramble the

>transmissions.

Then the same logic can be applied to use of the freeband.

>. How?

The method was your idea. The fact that you once again speak before thinking is illustrated by no one better than yourself.

>.Which means what exactly?

No one else is having trouble following. Ask for some help with just what it means.

>As usual, you are talking a bunch of circular

>.nonsense.

>Someday, I hope to read a nice long E-mail

>from you outlining just how your postings were

>all deliberate attempts at psychological

>tweaking. I can far better respect you for being

>that, than a unconscious dyslexic thinker.

I'm a freebander, David, and that is your problem and has always been
your problem ever since you claimed you were due respect by virtue of
your license. Such arrogance practically guarantees you to be the punch
clown of a cb group.

>My faith in humanity is greatly lowered

>knowing that such people exist and actually

>think they know something.

Especially when their claims are all unsubstantiated like yours.
It was always
a crime to eavesdrop on one's private telephone conversation using
electronic equipment, David. It violates federal wiretap law, but your
position of "thinking like a criminal" (your words) is interesting.

>.Wire tapping did not apply to radio devices at

>that time.

It was still considered a telephone and as such was subject to the rules
and regulations governing telpephones..

>.Nope. There was no provision in any wiretap

>law at that time that specifically addresses

>reception of cordless phones.

Here is once again where your incompetence comes into the picture. The
fact that they were cordless did not absolve them from the federal laws
governing telephone devices.

>So by using your logic, if it isn't specifically

>called out as illegal, assume that it is legal.

>That was the glaring loophole in the wiretap

>law.

No loophole at all, just another wrong claim from you.

>Then I'm sure you will provide the exact

>verbiage to substantiate your claim?

Yea, well the group was sure you would provide for your technical competence claims concerning your unsolicited invocation of a tech school you felt important enough to mention, but, (sigh), as usual, you provide nada <g>/.

>There could be no reasonable expectation of

>privacy when you run unencrypted analog FM

>signals over a band that is generally easy to

>receive by "common" radio receivers (Such as
>a scanner).

One's expectations of privacy has nothing to do with the law, David.

>.It has a great deal to do with it.

>Again, prove me wrong if you can (But I won't

>.hold my breath).

I've proved you wrong so many times with radio law that it's downright dandy giving you the cord and watching you so eagerly jump to wrap it around your neck. You are so quick to jump these days that you rant on about things you have no clue.

>.The only thing I have been wrong on was the

>roger beep issue. And you didn't prove that.

Right David, everyone else that tried to explain the law to you the manner in which I did was all a coincidence and collective lucky guesses.
Feel better, dude?

> I had to get the info myself from the FCC.

Yep, after you were instructed to becasue your ignorance and arrogance would not permit your ego to believe everyone else who was telling you that you were wrong.

> As for anything else, you're just blowing

>smoke.

>Now, I'll say this as directly and as succinctly

>as possible so that you will (hopefully)

>.understand it.

It is you that is always begging repeat clairifications of those you disagree, David. Projection of your dilemmas soothers you temporarily.

> Please provide the exact verbiage in the

>federal wiretap law, as is was around 1984,

>that specifically addresses reception of

>cordless phones.

(sigh) I am going to offer you the chance to stop filling the shoes of hypocrisy. Proper communication (something you have difficulties with) dictates when one makes a claim, it is up to that person to provide to substantiate the claim when challenged, as the burden of proof is usually on the claimant. When one is asked to provide for their claims, one is supposed to answer for those claims prior to demanding and foot stomping and begging others to so when you have failed to do so. You were asked several times by several people to provide for your ever-mounting lists of unsolicited claims. Your refusal to do so prevents you from asking the same of others.

>I am more than willing to post the links to the

>ECPA, showing the date that it became

>effective and what it covers.

Yet for some reason, you have spasms when asked to do so for your past lies, such as your tech school, your LEO friends, everything -you-mentioned or brought up.
Try reading what applied to your situation, not what you think gave you permission to violate the law.

>The ECPA is what specifically addresses

>wireless phone devices.

Ignorance is no excuse for breaking the
law. If you are going to break the law, you should at least be educated about the law you break and penalties you face.

>.Remember that each time you run your

>unlicensed transmitter on the freeband.....

My Ten-Tec needs no license or acceptance.

>True, for the amateur bands where authority to
>operate is granted to a properly licensed

>amateur (Which BTW, are you one?),

Irrelevant where you are concerned.

>and type acceptance of radio gear is not

>required. However, the radio is not authorized

>to operate anywhere other than the amateur

>bands except by license or authorization (such
>as MARS or CAP). Certain other bands

>require type acceptance of radio gear. The

>land mobile service (which is what the

>freeband was once part of) does (As does the

>CB band). So your Ten Tec is not type

>accepted to operate on the land mobile band,

>and you are not licensed as an operator on

>that band. That's two strikes.

You said my radio was unlicensed on the freeband..this would be compared to what.....do you have an example of a licensed transmitter on the freeband besides the ones I already provided in the past?
See, this is another example of your piss poor retainment skills, as you have been informed on repeated occasion that as an extra, you ought know such things, but then again you are the deviant exception to hammie ops, not the norm.

>You are the one who doesn't understand radio

>law.

I'm not the one who denied roger beeps were legal based on my own personal feelings despite the contingency trying to correct your ignorance of the law,,,-you- were.

>No matter how many time you spew your

>convoluted understanding of the law, it will not
>make it right.

Again, the only person that has illustrated a grave misinterpretation of any law has been yourself.

> You are not authorized to operate a

>transmitter on the freeband without a license.

And after all these years you still can not convince yourself that it doesn't matter to me, only you.

> It is not a band authorized by rule, therefore

>the operator requires a station license. If you

> don't have one, you are not authorized to run

>there, Period.

No one ever tried to say otherwise, David,,,where exactly is it that you became lost on such subjects?

>David T. Hall Jr.

>."Sandbagger"

>http://home.ptd.net/~n3cvj

I've talked to 187 before. He's a heavy hitter on the bowl. I've talked to a Big Gun in the cold country, but it was on the freeband freq where some of the users in this group congregate. I don't know if it's the same Big Gun.

Fluke Counter Model 1950A

100/115/230 50-60 Hz Vac or 12Vdc power.
With int/ext clock and gate BNC connectors.
Ch A & B BNC inputs.
Modes: Freq A, Freq(A/B)N, Period A, Totalize.
6 Ranges/Gate control.
Overflow indicator.
Cycle Rate control.
A-input 5Hz-50MHz/ 1 Megohm.
B-input 1KHz-10MHz/ 100Kohm.
2-LED trigger threshold indicator.
6-digits LED display... works completely.
Dimensions: 9.3"W x 8.5"D x 3.6"H

Can be used in-line.

Only $85.00 plus shiping.

Homer

>absolute proof is required instead of "high statisitical probability".
>Yet another flip-flop.

All we have been able to determine is that we are in a period of
global warming. Evidence has suggested that this planet has endured
many such cycles in its past. It is irresponsible to think that
mankind alone is responsible for the current phase of warming, and it
is equally irresponsible to suggest that if we were to magically stop
using fossil fuels today, that we could stop or reverse the trend. The
best we may be able to do is slow it down. But at what cost?

>But only for a couple years, even for a really big volcano. The
>current trend of global warming has been occuring for almost a
>century. That's about as much disruption as driving over a pothole
>while climbing a mountain pass.

It's likely that the current warming "trend" has been going on for far
longer. We've only obtained in the last 50 or so years the technology
to track subtle climatic and weather changes. What occurred before
that is anyone's guess, and evidence obtained in soil and ice samples
only fits in a part of that puzzle, and can give us a general idea,
but not specifics.

>>>I obviously know more about the subject than you, and there are

>Not volcanos, that's for sure......

Yes, we have an effect, but to say that our burning of greenhouse
gasses is the sole reason why we're in a warming trend is
presumptuous.

>Dave, despite what you and most of the Republican party would like to
>believe, there is indeed a consensus in the scientific community that

Exactly! Thank you for finally getting the point Frank. The fact is
that you can not be sure of any information one may post to "verify"
their status in life. With the skills of the internet, one can create
a completely artificial identity. So therefore, it is pointless to
continue to ask.

>>I have far more reference material than that one book could ever

My, my, do I detect a bit of contempt? Maybe it bothers you that I
(and many others) can access information on the internet for free
instantly, (and currently) where it cost you hundreds of dollars to
amass in book form?

Perhaps you're unaware of the phrase: "The paper never refuses ink".
It's not just the internet where a passionate pundit can publish their
slanted viewpoints. Just because it's in hardback form doesn't mean
than an equally gullible retard won't eventually incorporate it into
his or her "core belief" system.

>Along those lines, I'm sure you have found the homepage for the Hudson

That can be true. I never stated that with 35 watts that you will not
get stepped on. I used to hear shrimp boats in the bay here a mile
apart and land based stations upo to a kilowatt could not get between
them.

Power is not 100% a guarentee that you will always be heard. I used to
talk to a freind of mine on a dummy load with 50 watts into it.
Everyone thought he was ghost talking and was out of his mind. No one
could get between us. It helped that his antenna was about 350 feet
away.

You can phase two antennae with as little as 1/8 wave and be useable.
It just gives one very strange radiation pattern though.

>Republicans.

So I suppose that the democrats had not done the same thing when they
controlled the congress (Which they did up until 1994)?

If you want to say that congress plays creative accounting games with
Social Security, I'll agree and let it pass. But don't try to pin this
on republicans alone. Unless, of course, you truly are a blind

partisan.

>>>>>If you could quote any liberal who said that America should be a

>
>First of all, what you refer to as a "living wage" is mighty important
>to millions of voters who don't make a "living wage", mostly due to
>irresponsible Republican economic plans

Irresponsible Republican plans? You really area blind partisan aren't
you? What "republican (Or democrat for that matter) plan" can stop the
natural course to the free international market without seriously
altering it?

And who stops those who are making less than a living wage from
obtaining the skills necessary to rise above that? You did it. I did
it. There's no excuse for anyone so motivated to not rise above the
poverty level. Of course you'd have to stop pissing away your pay on
drugs, booze and cheap "dates" with the professional women.

It's called "Personal Responsibility". Take charge of your own life.
Don't wait for the government to bale you out (And blame then when

they don't).

Repeat after me: "I am not a victim!"

> (not to forget that 40% of
>wage-earners don't make enough money to pay income taxes and therefore
>didn't get Bush's 'tax rebate' that turned out to be nothing more than
>a loan).

I suppose you're one of those people who feel that those who didn't put anything into the tax system should v'e got something back. This wasn't "giveaway money" it was a REBATE on tax money already paid in to the system, If you didn't pay anything in, you can't very well get a rebate on it back. Last time I went to school 100% of zero is still zero.

>
>Second, "fair share" is in reference to fat-cats and corporations who
>skip out of paying taxes through shelters, subsidies and a variety of
>other carefully legislated loopholes.

As opposed to the progressive tax scale which punishes those who achieve by burdening them with a higher tax rate? A flat tax rate is the fairest thing. Everyone pays the same percentage. Those who make more, pay more as a matter of percentage of gross. But a progressive tax rate is little more than a thinly veiled socialistic attempt to shift the burdens of society from those who take the most, to those who make the most.

>And "universal care" is a simple concept that provides basic health
>care service for anyone whether they can afford it or not

But SOMEONE has to pay for it.

>-- more
>specifically, the programs are targeted towards children whose parents
>work two or three of Bush's new jobs and still can't pay the rent, let
>alone health insurance for their children.

People who do not possess the skills or motivation to obtain gainful jobs should not be having children. It's that "personal responsibility" thing again. Raising children is an enormous responsibility both financial and emotional. Potential parents should be ready on both counts before bringing another mouth to feed into the world and then abdicating their responsibilities on to the rest of us.

>It's also targeted towards
>the increasing senior population who will be SOL when the SS trust
>fund dries up in a few years

Yet you guys on the left are the ones now claiming that there is no problem with social security. Yet when Clinton was in office, it was a "big problem". Would you please make up your minds......

>
>>>>>>>"In a free society, you don't need a reason to make something legal.

Yet "West Wing" is any less shallow and crafted? It's Hollywood's
version of what THEY would like the government to be.

But which show stands a better chance of happening in the real world?

Hello, Frank

Don't suggest anyone follow that left-wing conspiracy! What I don't understand is that convicted criminal that talked about helping the poor. That left-wing nut that had the audacity to throw the money changers out of the temple. That left-wing radical was crucified 2000 years ago and the extreme right wing actually prays to Him, plus wants government aid to (only the "right") churches! I see the Texas government now signs laws inside of Churches.

Frank, please let me know what I am missing here ... :))

Best regards from Rochester, NY
Jim

Have for sale a Cobra 142 GTL with two desk mikes.One is the infamous Silver Eagle which is wired for the radio.The other is a Turner Super Sidekick which is not wired for the radio.It has a three prong plug on it.
I have no idea what the package is worth,so I will take offers on it and will sell it to someone.It is hooked up now at my home and sounds great and I get good reports on my transmits.I have no clue as to if it has been modified or if it is stock.So lets here some offers and not a bunch of Bull---- .

The Imax is kicking butt. I made my first Ham contact on 10 meters in Texas. When I told him he was my first ham contact, he got more excited than I got. I figured after coax losses, I am probably only getting out 15-20 watts on SSB. I am only getting out 6 watts on AM.

As far as CB and locals, they couldn't believe it was me because they barely heard me with the Firestik in the attic. This Imax seems to excel on receive. It is super quiet with no static.

No TVI here whatsoever. I doubt any nighbors will get TVI, they are farther away. Also, I think one of the benefits of that ground plane kit was ro reduce TVI.

But the receive is incredible with this antenna.

Hello, Vinnie

Try and remember that 10 and 11 meters are not a whole lot different for local contacts than 6 or 2 meters. Unless you have an antenna mounted *high*, don't expect extended local communications.

At a 20 watt level, you won't be lighting up the sky, so to speak, to be able to use tropospheric scatter to extend the range, so you can expect about a 10 mile range if your antenna is mounted 50 feet up. Then you will get little, if any coverage, until you are out hundreds or thousands of miles. Then, you start getting coverage due to reflection from either the F layer or sporadic E. The area in between is your "skip" zone. This is why you can work a distant station and many locals either cannot hear you or receive you weakly.

An amp will allow you to take advantage of tropopheric scatter. This is very similar to the big searchlights which you can see the beam from for many miles although you can't see the lamp itself. This can give you coverage for hundreds of miles.

Judicious choice of operating frequency can allow you to work all kinds of distances with relatively low power. I broke into a cw net in the South (Carolinas) one time running but milliwatts. That was on 80 meters. At lower frequencies, you can take advantage of the E or F layers to get reflection to other areas closer to you than higher frequencies. Generally, frequencies under perhaps 10 MHz will do well at night and frequencies from perhaps 6 to 18 MHz will do well during the day. Once we get good sunspots going, frequencies up to 30 MHz will do well during the day.

>
>All we have been able to determine is that we are in a period of
>global warming. Evidence has suggested that this planet has endured
>many such cycles in its past. It is irresponsible to think that
>mankind alone is responsible for the current phase of warming, and it
>is equally irresponsible to suggest that if we were to magically stop
>using fossil fuels today, that we could stop or reverse the trend. The
>best we may be able to do is slow it down. But at what cost?

Well, let's take a gander at what the internet has to say:

http://www.ucar.edu/research/climate/future.shtml
http://www.umweltbundesamt.de/uba-info-daten-e/daten-e/climate-change-worldwide.htm
http://www.dar.csiro.au/publications/gh_faq.htm

I can provide many more links to many more authoritative sources if
you can't find them yourself.

>>But only for a couple years, even for a really big volcano. The
>>current trend of global warming has been occuring for almost a
>>century. That's about as much disruption as driving over a pothole
>>while climbing a mountain pass.
>
>It's likely that the current warming "trend" has been going on for far
>longer. We've only obtained in the last 50 or so years the technology
>to track subtle climatic and weather changes. What occurred before
>that is anyone's guess, and evidence obtained in soil and ice samples
>only fits in a part of that puzzle, and can give us a general idea,
>but not specifics.

"Anyone's guess"? Gee, that's funny -- according to the links above, paleoclimatologists have been able to get temperature records from as far back as the 17th century, and determined that CO2 levels haven't been this high in 500,000 years.

As I stated before, Dave, the only one guessing is you.

>>>>I obviously know more about the subject than you, and there are
>>>>scientists that study this stuff professionally and know gobs more
>>>>than I will ever learn. You are the only one guessing, Dave.
>>>
>>>I am not guessing at anything. I am reading what those scientists, who
>>>know gobs more than you do, say. There is not a consensus among the
>>>scientific community as to the degree, direction, and involvement of
>>>humans on global warming. There are many scientists who cannot come to
>>>the same conclusions that you seem to have bought into, due to glaring
>>>holes in the evidence.
>>
>>
>>What holes? Humans -aren't- dumping huge amounts of greenhouse gasses
>>into the atmosphere? If not then where are those gasses coming from?
>>Not volcanos, that's for sure......
>
>Yes, we have an effect, but to say that our burning of greenhouse
>gasses is the sole reason why we're in a warming trend is
>presumptuous.

Not at all. Read (if you can) the links I provided. If you browse their sites you will find links to the top climatology labs in the world, almost all of which debunk the politically-motivated myth you have been led to believe.

>>Dave, despite what you and most of the Republican party would like to
>>believe, there is indeed a consensus in the scientific community that
>>the global temperature is rising,
>
>No argument.
>
>
>> and that we are the cause.
>
>That is where you are wrong. We are likely NOT the cause, we are
>merely a contributor or accelerator. There is still much debate on
>just how much effect we truly to have.

The only 'debate' is in the political arena:

http://www.agiweb.org/gap/legis108/climate_hearings_cont.html#September15

>>The only
>>disagreement is about the degree of impact this change will have on
>>our civilization. Oh yeah, and what to call it: "global warming" or
>>"climate change".

>
>You don't read much outside of those reports which support your
>foregone conclusion do you?

Sure I do. I even read some of the crap put out by the Cato Institute.
Wanna hear about the Cato Institute?

http://www.sierraclub.org/sierra/200207/thinktank.asp

>>>I could give you a dozen links if you'd like. I already gave some to
>>>Twisty previously.
>>
>>

>a completely artificial identity. So therefore, it is pointless to
>continue to ask.

With the internet you can also -confirm- a true identity. But that's
not what I'm asking -- I'm simply asking for proof that you make as
much money as you claim; that you work in the engineering field as you
claim; that you attended an electronic tech school as you claim; etc.
Or should I just file those claims in the basket along with your
imaginary engineer sources?

>>>I have far more reference material than that one book could ever

No contempt at all -- if you want to limit your resources because
you're too lazy to read a book then that's your problem.

>Perhaps you're unaware of the phrase: "The paper never refuses ink".

No, I've heard it plenty of times before -- you use the cliche as if
it were God's Eleventh Commandment.

>It's not just the internet where a passionate pundit can publish their
>slanted viewpoints. Just because it's in hardback form doesn't mean

>than an equally gullible retard won't eventually incorporate it into
>his or her "core belief" system.

The paper may not refuse ink but publishers will usually refuse the
submission of a half-baked "passionate pundit". OTOH, you could modify
your favorite cliche to extend to the internet where it's much more
appropriate; where you, Dave, happen to be it's most glaring example:
"The internet never refuses ASCII".

>>Along those lines, I'm sure you have found the homepage for the Hudson

>So then how many divorcees end up remarried?

Read my statement again, but this time stretch the limits of your
reading comprehension skills:

"Half of all marriages end in divorce."

Now think for a minute (assuming you can supress your medication that
long)..... What did I say in that statement? I said, very simply, that
one out of every two marriages ends in divorce. I didn't say anything
about divorcees getting remarried; I didn't say anything about how
many people are currently single and divorced; I didn't say anything
about -anything- other than what I said. And what I said is backed up
by marriage and divorce rates as provided by the CDC, which is the
agency that is repsonsible for collecting those statistics. What I
said is -not- undermined by census data because it doesn't have enough
information to determine marriage and divorce rates. What I said was
not an opinion or statistical abberation, nor was it a report written
by some "skilled left wing propagandist". What I said was a fact.

So are you -now- able to tell the difference between fact and opinion?
Or do you need yet -another- lesson?

The blame does indeed rest with the Republicans. The Democrats have
consistently pushed to bolster Social Security since the 1960's, while
the Republicans have repeatedly dipped into the fund. Are you so out
of touch that you don't understand why the Democrats are so popular
with people that don't have a six-digit retirement portfolio? Holy
crap you are ignorant, Dave!

A certain amount of socialism is going to be part of the system
-regardless- of who runs the country. The reason is simple: poor
people vote. So would you support a Constitutional Amendment that
would guarantee every citizen the right to vote?

>>>>> Names like "living wage", "fair

>
>Irresponsible Republican plans? You really area blind partisan aren't
>you? What "republican (Or democrat for that matter) plan" can stop the
>natural course to the free international market without seriously
>altering it?

Let's put it this way: For the past few decades the Republicans have
been campaigning on the pretext that they are for smaller government,
yet in -every- Republican-dominated administration the government has
increased in both size and spending. Republicans spend like they are
on a Bloomingdale's shopping spree! They claim that all the spending
is good for the economy, yet when it comes time to pay the bill for
all that spending they lose control of the budget with phrases like,
"Read my lips...." and the people get stuck with the bill. Then they
leave the books for the Democrats to balance and maybe build up a
surplus, which the Republicans end up throwing away on more spending

and tax refunds when they regain control of the budget.

It's like none of them ever learned basic fiscal responsibility: when you get a little extra cash it's much wiser to use it to pay down the credit cards, put back what you pilfered from the SS trust fund, and save a little for a rainy day. Nope, the Reps just end up throwing the money around like they were eccentric tycoons and it was -their- money to spend. And when that money is all gone they just max out the credit cards -- again. What they say and what they do are two very different things. That is what I call 'irresponsible'.

>And who stops those who are making less than a living wage from
>obtaining the skills necessary to rise above that? You did it. I did
>it. There's no excuse for anyone so motivated to not rise above the

>
>It's called "Personal Responsibility". Take charge of your own life.
>Don't wait for the government to bale you out (And blame then when
>they don't).
>
>Repeat after me: "I am not a victim!"

You need to pull your head out of the sand. I used to think that way too, that everyone has the ability to take charge of their own future, to better themselves with education, to work hard and make something of themselves. Then I got a look at the -real- world. It just doesn't work that way, Dave. You claim to live in the real world yet you know nothing about it. And I'm not going to explain this aspect of it to you. You have to go find out the facts for yourself -- assuming you want to continue to claim that you are in touch with reality.

>> (not to forget that 40% of
>>wage-earners don't make enough money to pay income taxes and therefore
>>didn't get Bush's 'tax rebate' that turned out to be nothing more than
>>a loan).
>
>I suppose you're one of those people who feel that those who didn't
>put anything into the tax system should v'e got something back. This
>wasn't "giveaway money" it was a REBATE on tax money already paid in
>to the system, If you didn't pay anything in, you can't very well get
>a rebate on it back. Last time I went to school 100% of zero is still
>zero.

As usual, you missed the whole point: 40% of people who work don't make enough to pay taxes. What does that tell you, Dave? And there is no such thing as a "tax rebate" -- if government spending doesn't decrease by the same amount then it's nothing but a loan. As it turns out, government spending increased -dramatically- after the rebate and -before- 9/11; Bush's plan was that the "rebate" would stimulate the economy enough that the cost of the rebates would come back in the form of increased tax revenue. The plan never worked before, but

apparently Bush slept through that class in college (you and Bush sure
have a lot in common).

>>Second, "fair share" is in reference to fat-cats and corporations who
>>skip out of paying taxes through shelters, subsidies and a variety of
>>other carefully legislated loopholes.
>
>As opposed to the progressive tax scale which punishes those who
>achieve by burdening them with a higher tax rate? A flat tax rate is
>the fairest thing. Everyone pays the same percentage. Those who make
>more, pay more as a matter of percentage of gross. But a progressive
>tax rate is little more than a thinly veiled socialistic attempt to
>shift the burdens of society from those who take the most, to those
>who make the most.

I don't recall saying anything about a "progressive tax rate".

>>And "universal care" is a simple concept that provides basic health
>>care service for anyone whether they can afford it or not
>
>But SOMEONE has to pay for it.

OF COURSE someone has to pay for it. Someone has to pay for every
aspect of the government. Do you want it to be fair? Then boil down
the cost of government per person and let -that- be the tax. If they
can't pay it then send them to debter's gulag where they can work off
their debt to the government. And don't forget to ship them off when
they're young -- heck you don't want to defer taxes to kids while they
go to college since they might end up improving their life and taking
your job in the future. And if they get sick just let them die, even
if the illness is curable. After all, if they can't produce anything
they might as well be dead anyway, right? And if they can't even meet
their tax burden then what business do they have spending money on
antibiotics to get rid of an infection, or a doctor to set a broken
leg? Survival of the fittest, to be sure. Darwinism + taxes. Good
plan, Dave.

>>-- more
>>specifically, the programs are targeted towards children whose parents

>>won't . Trying to bury me under a pile of nonsense is not going to
>>work Frank.
>
>
>No, -you- don't work, Dave.

You keep saying that. Maybe someday you'll convince yourself.

>You can't accept the fact that you are
>wrong,

Sure I can, when it's true.

> and when I post facts that you can't spin or obfuscate you
>simply ignore those posts and pick the posts that you feel you can
>work to your advantage.

When are you going to post any facts?

> It's a bonehead tactic and you are too
>ignorant to see that it works to -my- advantange, not your's.

Seeing that you seem to be the only one who cares enough to respond to
me on these topics, the only "advantage" you seem to have is contained
largely within your own mind.

Now, I'll address your valid points below......

>>>>Tariffs are an overly naive and simplistic answer, which will not
>>>>help. I'll tell you why. First off, the import tariff will raise the
>>>>price of imported goods which drive up the costs that the American
>>>>consumer pays. Then the worker will demand more in raises to
>>>>compensate, and you now have inflation.
>>>
>>>

>>>Wrong.
>>
>> No, right. If you are going to claim that I am "wrong", protocol
>>dictates that you provide corroborating evidence to back it up. Simply
>>claiming that I'm wrong based on little more than your own ignorance
>>of economics is not going to be seriously considered.

And I'm still waiting for that evidence.....

>>> Import tariffs drive up the cost of -imported- products, which
>>>in turn encourages -domestic- production and manufacturing. The prices
>>>will go up, as will the wages;
>>
>>Which translates to..... INFLATION!
>
>
>Inflation occurs when the costs increase faster than the wages (an
>explanation simplified for someone with your level of education).

Evidently too complex for someone of your education.

I prefer to reference such sources as:

http://inflationdata.com/Inflation/Articles/Definitions.asp

In essence inflation is the devaluation of currency due to a sharp
rise in the amount of it in circulation. Since the value of the
currency drops, the individual prices must rise to compensate.

>Import tariffs actually -reduce- inflation for the very simple reason
>that the export deficits are reduced and more American money stays in
>America.

Tariffs have nothing to do with inflation directly. But it can
stimulate it by initiating price increases.

As I showed before, placing tariffs on imported goods will often
result in retaliatory actions from other countries, and we'll have
accomplished nothing.

>>If you want to pay $500 again for a VCR or DVD player, and $400 again
>>for a decent CB (Like it was in the 70's not even accounting for
>>inflation) then maybe this might appeal to you.
>
>
>VCRs and CBs were expensive because of their popularity at the time,
>not because of inflation.

No, they were expensive because the cost to manufacture them was much
higher. Both advances in technology and in manufacturing as well as
finding cheaper sources of labor have resulted in price reductions.

>> But the problem is
>>that the American public has become adjusted to receiving high

>>American wages, while paying for cheaper imported goods. If the price
>>of goods increases substantially, then the wages of the workers will
>>have to jump to cover it.
>
>
>You are assuming the premises that 1) the cost of imported products
>will "increase substantially", and 2) that there are no domestic
>substitutes for those products.

And that's mostly true, despite your inability to acknowledge it.

>Both are wrong:

So you say, but I have yet to see any facts to back it up.

>
>The price of -any- product relies upon the laws of supply and demand.

That's true to an extent.

>If you have a hammer made in China and a hammer made in the USA, the
>price is going to be the same because the market dictates the price.

Right, and when a hammer can be made cheaper in China, it forces the American company to lower its price (Often resulting in sharp reductions in overhead to keep a reasonable profit margin). At some point the American company will no longer be able to compete. The price is set by the lowest price that someone is will to sell it for. That is why competition is so important for a free market economy. If there is only one source for a popular product, they can set practically any price, and if a consumer wants it bad enough, they'll cough up the money. Look as gasoline. We all bitch about the high cost of gasoline. But we still pay it, because we need it.

>That's why it's called a "free-market economy". Imposing import
>tariffs increases the costs to the manufacturers of the hammers from
>China, but the price remains the same because the demand hasn't
>changed.

That is where YOU are wrong. The tariff cost is added to the selling price, in order to give the American competitor some relief. If the Chinese manufacturer ate the cost, and kept the lower price, the American company would not be able to compete at that level. The whole point of tariffs is to RAISE the price of cheaper foreign imports in order to stimulate domestic competition. Remember the price is set by the lowest bidder. People will buy the cheaper goods, all other factors being equal. Without those (tariff imposed) higher prices, the American company doesn't have a chance, baring American workers suddenly becoming willing to work for 25 cents an hour.

> But because of the increased cost to China the supply from
>China will be smaller.
> That reduction in supply is met with an

>increased supply of hammers from the US manufacturers, who are now
>relieved of some of the foreign competition.

They will only be relieved and offered a chance to increase supply if
their price now becomes competitive. And that will only happen if the
imported good's price rises from the tariff.

>In the process, more
>Americans are hired to make those hammers,

Sorry, we can automate that process. And we can outsource customer
support and logistics to India.

> which, in turn, improves
>the economic status of not only the company that manufactures the
>hammers, but also of the community that benefits from the jobs and the
>government that benefits from the taxes. Everybody wins except China.

I think you need to go back to school. You don't quite have a complete
grasp of global economics and the dynamics of the free market and the
effects of competition on the selling price. Demand causes the price
to rise. Competition causes the price to fall.

>> When that happens the cost of corporate
>>direct labor and overhead goes up, and they have to raise the price of
>>manufactured goods to cover it. And the cycle of inflation repeats.
>>Part of the reason why the rate of inflation has been so low for the
>>last several years is due to the fact that the cost of goods had
>>actually dropped as corporations tighten their belts and outsource
>>more of their labor. Demand for higher wages has fallen, and inflation
>>remains in check.
>
>
>Wrong again.

Proof?

>Inflation has been held in check by interference by the
>Federal Reserve.

Yea, that's why they had been lowering the interest rate to just
around 1%. Only recently has there been any action on the part of the
FED to raise that rate. Over the last few years, companies have been
worried about DEFLATION.

>Greenspan sets the prime interest rate to control
>lending (which puts money into the economy), and with the buying and
>selling of T-bills.

And imagine that, the mortgage rates, which are tied to the 10 year
T-Bill has been the lowest in over 40 years.

> Despite this, inflation -does- occur because the
>major inflationary indicators are not perfect and the calculations are

>usually flawed to some extent.

If you are trying to say that we can't really control inflation as
well as some might like to believe, then I agree with you.

> But because of this interference, there
>is no longer a free-market economy, and free-market economic models no
>longer apply.

No shit. But things like tariffs are also interfering with the free
market. Outsourcing, free and open trade, and elimination of
protectionist tariffs support the free market. If you favor tariffs,
limits on trade, and penalties for outsourcing, then you don't support
a free market.

> So it's possible to have inflation and recession at the
>same time,

No kidding. The two aren't necessarily joined at the hip. Just look at
the Carter years. We had both then.

> or have two or three economic markets operating independent
>of each other. Regardless of it's unnatural complexity, the economy is
>manipulated to the advantage of those that wield power over the
>Federal Reserve. And regardless of the economic impact of import
>tariffs, the Federal Reserve will control any inflation (to the extent
>that it can be controlled), with the added benefit that the country
>stops bleeding from huge export deficits.

There are some thing the government can do. But they are small. They
can give tax incentives to companies who maintain a large percentage
of it's workforce here. But beyond that and you risk altering the free
market, as well as drawing the fire of the EU and the WTO for what
they will perceive as "protectionists" tactics. Remember, what's good
for us, is bad for them, so they will fight any effort to apply
tariffs.

>>>but the overall effect is that the
>>>domestic economy is stimulated, which more than compensates for any
>>>short-term dips. And for the record, it also reduces the amount paid

>>market. It will do little to help the corporation in the international
>>market share.
>
>
>Find me one American that's willing to stand in the unemployment line
>so someone from India or China or Venezuela can have their job.

And just what relevance does this have to the big picture? No one said that outsourcing is good for the american factory worker. But hiding your head in the sand as to the reasons why it happens will not make it go away.

Make it harder for American companies to do business here (And abroad), and it's a small matter to move to Bermuda or the Bahamas or any other country with little trade restrictions. Congratulations! Not only have you outsourced the manufacturing, you've now driven away the management as well.

>>>> Secondly, the U.S. is but ONE

Sort of like handing Captain Smith a bucket as the bow of the Titanic slipped under the waves?

>Speaking of policy, when do you suppose Bush is going to make good on
>his promise to unite the parties and do away with partisan politics?

I suppose it has a lot to do with the democrats opposing anything that a republican does. It's a two way street. The democrats are obligated to be uniters as well. But like you can lead a horse to water but not make him drink, we can sit politicians into a room, but we can't make them cooperate. They have to do that on their own. And with nutcases like Howard Dean trashing republicans in public speeches, it's doing nothing more than driving a wedge into the crack.

>>>Stimulate the

>
>
>Oh, you mean like if an employer sees a greater value in a better
>education?

Not the same thing. A Mercedes earned it's pedigree and reputation and
that pedigree and name recognition is worth money alone. On the other
hand, if you went to a 4 year school, over a 2 year school, unless you
worse a shirt that said "I went to a 4 years college, hire me", you
would have to prove your pedigree. I agree that the intrinsic value is
there. But the public perception isn't necessarily there as well.

>> So I ask again, is the relative value
>>of a Ford the same as that of a Mercedes? Would the Ford be able to

>>compete on a price basis with a Mercedes? If not for the cheaper price

>>to abandon the "Buy American" motif, in favor of their own bottom
>>line.
>
>
>The price difference in the past had little to do with import tariffs
>and much more to do with raw materials.

There were import tariffs on Japanese cars (But not trucks). I bought
a new Suzuki Samurai in 1988 and the dealer had to add the back seat
since without the back seat, it could be classified as a truck and
avoid the tariff on cars.

> That's why nowdays we cut down
>our own trees, ship them off to foreign countries to be made into
>plywood, which is shipped back and sold in the US for ridiculous
>prices.

That's also why I used to pay taxes and subsidized the cost of
building a nearby nuke plant which, now that it's operating, sells its
electric to New York, and rather than the electric bills dropping as
first promised, we're strapped with the cost, while seeing none of the
benefit.

> This is a direct result of "free trade" with foreign
>countries, not high labor costs in the US as many claim. Because of

>these free-trade agreements, restrictions were lifted for raw
>materials being exported but -not- for raw materials being used for
>domestic manufacturing.

If true, that's an oversight that should be corrected. We should not
penalize domestic manufacture. But Ross Perot was right. NAFTA did
result in a large sucking noise, as jobs moved south of the border.

> Same deal with imported products. If you are
>going to invoke the WTO to support your arguments then at least learn
>something about the dirty deals the US has made in its benefit. I'm
>suprised you haven't because Clinton made a few of those dirty deals.

I consider NAFTA a dirty deal for this country. But the WTO is the
economic equivalent of the U.N. It represents the economic interests
of many countries. For a global market to work fairly for everyone,
such an organization is needed. But just like the U.N. it can be
corrupted by the allure of money.

>>This example also speaks to your assumption of "superior American
>>technology" and ingenuity. Don't look now, but we've been beaten at
>>our own game.
>
>
>That's because you are ignoring the fact that technology is exported
>just as easily as wood.

Even easier. The internet makes it as easy to access computers in
India, as it does to access the servers in the next room. I am hardly
ignoring it. I am WELL aware of it. I can telecommute, video
conference, and speed dial offices in Taiwan, Mexico, the U.K, India,
and Argentina as well as all over this country. Other than not being
able to shake hands, the transactions are the same. Physical borders
mean nothing in cyberspace.

>>>What if all US companies lobbied for import tariffs?
>>
>>What if there really were a man in the moon?
>
>
>It's more likely than your "mass corporate suicide" scenario.

You don't understand. Corporations operate in a global marketplace. If
they don't make profits here, they'll make them elsewhere. The bottom
like is making money and enhancing shareholder value. The last thing
they want to do is rock the boat and risk alienating their foreign
business partners.

>>>Wrong. The failure of Reaganomics proved that people create their own
>>>jobs when the rich get too greedy. They do so out of necessity.
>>
>>Reagonomics was far from a failure.

That's pretty much what I said.

>Regardless, the prime interest
>rate controls the amount of money that is borrowed, and the amount of
>money borrowed has a direct effect on the amount of money circulating
>in the economy, even much more so than the buying and selling of
>T-bills.

And the amount of money circulating affects the valuation of currency
which is a prime factor of inflation.

>
>>Any time the government mucks with the market, it upsets the balance
>>of the free market. Why do you think healthcare costs are so high?
>
>
>Insurance companies. Probably the biggest legalized racket since
>organized religion.

Insurance is a concept that has grown to a big green monster.
Healthcare insurance is a perfect example of what happens when you
artificially increase demand, without capping the supply side. Like
you said before, the price of any good or service is ultimate set to
what people are willing to pay for it. As long as insurance allows
people to afford care that they would otherwise not be able to afford,
the incentive is there to raise the price of those services. And
that's exactly what has happened.

>
>>>>>> But when the standard of living
>>>>>>equalizes, then there will be no further incentive to manufacture
>>>>>>overseas. Then factors such as shipping costs will make domestic
>>>>>>manufacturing attractive again for the U.S. market. Inflation may also
>>>>>>be mitigated by market pressures. If people cannot afford to buy as
>>>>>>much, demand goes down. When demand goes down, so does the price.
>>>>>>That's free market 101.

298. Help: Squeal from Hallicrafters Mark II CB

Newsgroup: rec.radio.cb
Date: 2005-06-08 13:37:17 UTC
From: "Dirty Q. Tip" <unavailable@e-mail.com>
Message-ID: <b3tda1ltoe1ip2uvjpi8l5j3a1rrn6l079@4ax.com>
Source record: 201184

Here's the deal. I've got a Hallicrafters Mark II (2) 6 channel CB radio. This thing is really old - it still has my grandfather's old radio ID taped to it (xxx#####, x=letter, #=number). Anyhow, I took it to my friend's house the other day, and wired it up to his existing CB setup's connections to test it.

Positive to positive, negative to negative (case is grounded as well), attached the coax. Powered it up, lights came on, and got nothing but static on Channel 19. During a brief (under 1 second) key-up, the radio squealed - that's the only way I can describe the sound; or perhaps a whine might also be a good descriptive sound. Also, the red transmit light (I assume that's what it is) came on immediately after keying up, turned off before I could release the mic key, and flashed once again after I released the mic key. During the time the mic was keyed (tried it several times, never longer than 1 second), the radio would squeal. I'm not talking about squeal through the speaker, I mean the circuit itself squealed/whined.

Any thoughts or ideas? My grandpa was a smart man, and kept all of the documents on this radio (including the receipt and the business card of the guy he bought it from, they're in my closet somewhere), so I've got the schematics and the user's manual for the unit. Problem is, I know almost nothing about troubleshooting radio equipment. Hence, I have no clue where to even begin. A starting point and any additional guideance would be much appreciated.

I openly admit, I'm not certified to work on radios. However, once I can get this thing to transmit without squeal/whine and receive again, it's going back on a shelf until I can afford to get a cert'd tech to inspect and tune it as needed. I don't intend to break any laws by working on the unit, I just desire to get it operational again. I'm thinking it could be feedback from a blown final transistor (complete guess).

I consider what I'm going to do akin to fixing your car before taking it in for a smog test..... I'm just fixing it, and I'm not going to operate it until after a tech inspects it (and even then, I might not operate it, instead opting to keep it as a collector's item and family memorabilia).

My reasoning for wanting to fix this CB rather than use it as a boat anchor is that it was my grandpa's radio, and I'd love to restore it in his honor (might seem lame, but it's a personal thing).

Hello, Frank

LOL. I see you still are firing on all 8 cylinders ;)

As to signing laws in Churches, it was done in the last week in Texas. I'm waiting for a Jewish or Muslim organization to sue. Should prove interesting as it is very difficult to interpret the Constitution in that manner when it talks about separation of Church and State. It would prove difficult to stack the Supreme Court with someone who could go that far into right field. There is always room for some interpretation (which is why both sides want only certain candidates), but ..... this is a bit much.

Perhaps it only means the Catholic Church?

:))

You have to realize that this administration is playing to knee-jerk reactionaries that don't have a clue as to what is going on. One of the "laws" was the banning of gay marriages - which is only ceremonial as it has to be approved by referendum. This country is going down the tubes.

Weapons of mass destruction - no gay marriage (I'm not suggesting it; simply stating that it is a simple ploy to divert attention) anything to make our leaders look good. Nada. Social Security in trouble. Perhaps, but did you see General Motors is laying off 25,000 folks? Pension plans going belly up? Last year the SUVs did well (big tax rebates for kids. It sounds good, but diverts attention that the rich get far bigger tax breaks than the guy with 5 kids making 70,000 per year). Well, a lot of SUVs suddenly appeared in poverty stricken Rochester, NY. My neighbor suddenly has 2 SUVs! She was convicted a few years ago of grand larceny. Well, they paid for retraining. She has a job (I don't believe a particularly good one), and now has *two* new SUVs! She has a lot of kids.

It worked well for 1 year. Now folks will be making balloon payments and praying that tax refund won't stop. Don't bet the bank. Breaks for the rich will stay as long as the Republicans are in office, but this country *cannot* withstand the deficits much longer. And I doubt the tax breaks (kids included) for the under middle six-figure incomes will continue.

You can only blame the poor and working class for so long. Eventually, the truth will come out. Like with Richard Nixon - but the current spin is that the lousy turncoat working for the FBI, etc.

The spin the current administration puts on things is faster than my 48X cd rom spins! :))

73 from Rochester, NY
Jim

No, that's true for any product or service. That's why they are call
the LAWS of supply and demand.

Hence the success of Wally World.

> The
>price is set by the lowest price that someone is will to sell it for.

Wrong. It's set, as I stated before, by the laws of supply and demand.
Just because the curves intersect at one point doesn't mean the price
is fixed -- there are variations in supply -and- demand based on a
number of factors such as quality, geography, culture, perception.....
or the tactic used by some companies to flood the market with cheap
products in order to drive the competition out of business (which is
why our cars run on gasoline instead of alcohol).

>That is why competition is so important for a free market economy. If
>there is only one source for a popular product, they can set
>practically any price, and if a consumer wants it bad enough, they'll
>cough up the money.

That still follows the laws of supply and demand.

> Look as gasoline. We all bitch about the high cost
>of gasoline. But we still pay it, because we need it.

Gasoline also follows the laws of supply and demand. And here is proof
that you never studied economics -- when the price fluctuates easily
in response to demand then the product is said to be "elastic";
likewise, when the demand remains relatively constant despite the
price, the product is called "inelastic". Very basic terminology from

Econ 101. And one more thing: the government -loves- to tax any product that is inelastic because it doesn't affect the demand for the product. That's why alcohol, tobacco and gasoline are taxed so heavily.

<big snip>
>> But because of this interference, there
>>is no longer a free-market economy, and free-market economic models no
>>longer apply.
>
>No shit. But things like tariffs are also interfering with the free
>market. Outsourcing, free and open trade, and elimination of
>protectionist tariffs support the free market. If you favor tariffs,
>limits on trade, and penalties for outsourcing, then you don't support
>a free market.

Import tariffs interfere with a free -international- market, and that's the intent: when the international market starts to hurt the domestic market, you establish import tariffs. It's been done for hundreds of years and it works pretty darn well. And in case you didn't notice, Toyota has offered to raise the price of their cars so GM can stay competitive (and in business) in the domestic market. The reason given was that low import prices hurt the American economy (the recent GM layoffs) and is therefore bad for US/Japanese relations. Looks like Japanese industry is looking out for American interests better than our own government.

I'll make this as simple as I can: If a country outsources almost all it's industry (like the US has done in the past 25 years) then you no longer have an industry-based economy. With the loss of industry we have been reverting to a service-based economy. Now the -service- jobs are being outsourced as well. So what's the next rung down on the ladder, Dave? Salvage -- a nation with an economy that's based on scrounging through our garbage piles for resale to, ironically, the now industrialized nations that only a few decades ago were called 'third-world countries'. And that change is already happening. The US is literally exporting it's garbage to foreign countries to be recycled into the raw materials for -their- industries.

But you think I should go back to school. I don't know why since I earned a 3.9 in both Micro- and Macro-Economics. At what school did -you- learn economics, Dave? "Internet University"?

<snip>
>>Speaking of policy, when do you suppose Bush is going to make good on

>
>Facts only please.

One fact is that too much free international trade hurts the domestic
economy. Another fact is that the US isn't subject to the laws of the
WTO or NAFTA. We can pull out just like Bush pulled out of the Kyoto
accord. And another fact is that if the US pulls out of the WTO or
NAFTA then there will -still- be international trade for the simple
reason that the US has money and foreign companies want it. And yet
-another- fact is that you have an extremely limited understanding of
economics.

>worse a shirt that said "I went to a 4 years college, hire me", you
>would have to prove your pedigree. I agree that the intrinsic value is
>there. But the public perception isn't necessarily there as well.

First, look up the word 'pedigree'.

Second, I can communicate my credentials (not my 'pedigrees') to a
potential employer with my resume.

Third, public perception only matters if the public is doing the
hiring, such as making a choice between Bush or Kerry (both of whom
had shitty grades in college, a fact which has been ignored by the
press until just just recently for whatever reason).

Fourth, many academic institutions have reputations (not 'pedigrees')
that speak to the benefit of the graduate. A graduate from Cal-Tech
has a much better chance at getting hired than someone who passed a
correspondence course advertised in a magazine.

So what's the name of that tech school you claim to have attended,
Dave?

The contracts are both long-term and binding on Iraq, regardless of what name they call the company or who runs it. You are clearly out of the loop on this issue, Dave. Take some time and get yourself up to speed. And take a couple semesters of economics while you're at it.

Yeah, I'm beginning to think he isn't who he claims -- probably one of
the real Dave Hall's genetic disappointments camped out in a trailer
in his back yard or holed up in the basement. I wonder if he's related
to Eddie, Freddie and Teddie Hall here in Spokane.....

I noticed that Howard Dean is doing much the same thing from the other
side of the fence. They should really put a muzzle on that guy.

> One of the
>"laws" was the banning of gay marriages - which is only ceremonial as it has
>to be approved by referendum.

True. I doubt that they ever expected it to stand up in court. But
that doesn't stop the politicians from getting people worked up about
it and taking sides.

> This country is going down the tubes.
>Weapons of mass destruction - no gay marriage (I'm not suggesting it; simply
>stating that it is a simple ploy to divert attention) anything to make our
>leaders look good. Nada. Social Security in trouble. Perhaps, but did you
>see General Motors is laying off 25,000 folks? Pension plans going belly
>up?

>*cannot* withstand the deficits much longer. And I doubt the tax breaks
>(kids included) for the under middle six-figure incomes will continue.

You are absolutely right. This economy has been supported by unsecured
credit for way too long. Have you noticed that the SEC has allowed
stock trading on margin? That's the same irresponsible investment

tactic which led to the 1929 stock market crash. It won't be long.....

>You can only blame the poor and working class for so long. Eventually, the
>truth will come out. Like with Richard Nixon - but the current spin is that
>the lousy turncoat working for the FBI, etc.

Naw, won't happen. Any damning facts are withheld under the cloak of
"national security", and the "truth" is written to benefit those in
power. Unless the Republican party falls to ashes in the next decade
you'll never hear the whole story about the Bush regime.

>The spin the current administration puts on things is faster than my 48X cd
>rom spins! :))

More like a dentist's drill -- LOL!!!

Well, gentlemen understand that certain personal experience
contributes to the insight on certain subjects. But if you want to
turn every claim into an "It's a lie until irrefutable proof positive
is offered to substantiate it", situation then ok, your point is
valid. In that case, there's no further point in debating, since that
level of proof is usually not forthcoming.

Lazy? Are you some sort of luddite purist? In the time it would take
me to drive to a library (And where I live, it's a bit of a hike),
find an appropriate book, sign it out, and bring it home, I could have
read much more similar information on-line at no cost, using no fossil
greenhouse gas fuel, and at a great saving in precious personal time.
It's not about being lazy, it's about efficiency. Working smarter.

Really? Then I guess by this revelation, that you'd endorse the
published books by such people as Ann Coulter, Rush Limbaugh, Sean
Hannity, Bernard Goldberg, and Micheal Medved as being totally
correct, factual, insightful, and rational?

I guess it never occurred to you that profit motivation in the
publishing field is a far greater motivator than factual integrity.

Yet you keep begging for proof. If you ask others for proof of -their-
claims but refuse to provide proof of -your- claims then you are a
hypocrite, a fact which you have unwittingly proven so many times in
this newsgroup.

<snip>
>>With the internet you can also -confirm- a true identity. But that's

>bother?

Because even now, after you have gone to such great lengths to avoid
giving that info, I might just believe it. At the very least it would
lend a -little- bit credibility to your claims, which so far have no
credibility at all. But if you don't want to fork over the info that's
fine -- you go right on saying how you attended some anonymous tech
school, cite the opinions of imaginary engineers, and brag about how
you are financially well-to-do -- those are just three items in a long
list of unproven claims you have made in just the past few months. So
even if you -can- prove them, who cares? You're still an idiot, a
liar, a hypocrite and a homophobe. And after your latest revelations,
probably a closet Nazi, too.

>It's not about being lazy, it's about efficiency. Working smarter.

There are resources in a public library that simply are not available
on the internet. One of the biggest reasons is because of copyright
laws, but there is also a much wider variety of reference materials
available there as well. And since so many libraries now have internet

terminals, you can do -both- at the same time. If you're so worried about creating greenhouse gasses then don't eat so much, since methane is 20 times as reactive as a greenhouse gas than carbon dioxide..... oh, but that's right, you don't think global warming is caused by humans. Well, that blows -that- excuse all to hell. But even if you have any doubt, ride a bicycle, take a bus, hitch a ride with a neighbor going in that direction. Or simply plan ahead to go there next time you're in the area.

Or you can just sit at home and make excuses, which is just fine with me.

Apparently you don't have enough brains to realize that such books are published because of the author's celebrity and/or controversial status. It's easy money.

>I guess it never occurred to you that profit motivation in the
>publishing field is a far greater motivator than factual integrity.

On the contrary, factual content tends to be -very- important to publishers. Books (by celebrities and controversial personalities) are screened by teams of lawyers looking for possible cases of libel. But those books tend to be mostly opinion, and opinion does not constitute libel -- which is why -you- need to learn the difference between an opinion and a fact. Have you learned that lesson yet?

>the wrong people.

Wrong. I trust nobody except myself. And sometimes I don't even trust
myself, but that's only because of an incident long ago involving a
fifth of Quervo and some prank calls to 911.....

That statement is disingenuous. Many people marry for the wrong
reasons once, divorce after 2 or 3 years, and then marry again, and
this time stay married. Those facts aren't reflected in your numbers.

Proof please. Democrats have traditionally been of the expand
government programs, and tax people to pay for it type. While
republicans have been in favor of trimming government programs and
giving money back to the people.

> Are you so out
>of touch that you don't understand why the Democrats are so popular
>with people that don't have a six-digit retirement portfolio? Holy
>crap you are ignorant, Dave!

The reason that democrats are popular with the poor and politically
ignorant (Which appears to include you), is because they promise to
"give" them something that they don't have to earn themselves. Whether
it's welfare, Social Security, Food Stamps, free health care, extended
unemployment, or any number of "gimme" programs. Those programs are
championed by democrats, and favored by people in need, and paid for
by people who earn. It's nothing more than redistribution of wealth
and leveraging class warfare to advance their political goals. One of
those goals is to create a class of dependant people who the democrats
can continue to feed (Just enough to keep them above water, but not
enough to become truly independent), in exchange for their continued
support.

Democrats are popular with those who take.

Republicans are popular with those who MAKE.

>>Any liberal who supports subsidizing any and all social programs,

>>part and parcel of a "Welfare State".
>
>
>A certain amount of socialism is going to be part of the system
>-regardless- of who runs the country.

No, it doesn't have to be. I suppose you've heard the saying: "Give a
person a fish and he eats for a day. Teach a person to fish and
they'll eat for a lifetime"? That's one of the major differences in
ideological philosophies between conservatives and liberals. Liberals
just want to throw money at every problem and hope that it goes away.
Conservatives want to teach people to be self sufficient and to learn
to stop thinking of themselves as victims.

>The reason is simple: poor
>people vote. So would you support a Constitutional Amendment that
>would guarantee every citizen the right to vote?

Sure, why not? Most poor people would rather earn their own keep, if
given that chance.

>
>Let's put it this way: For the past few decades the Republicans have
>been campaigning on the pretext that they are for smaller government,
>yet in -every- Republican-dominated administration the government has
>increased in both size and spending.

Proof please. Start in 1995 with Newt Gingrich's brilliantly executed
"Contract with America" and how, for the first time in many years, a
republican led majority in congress, slashed pork, wasteful spending,
and government programs which resulted in the balanced budget that
"Slick willie" Clinton tried to take credit for, and laid the
foundation for the tax cuts that Bush gave back to every taxpayer.

> Republicans spend like they are
>on a Bloomingdale's shopping spree! They claim that all the spending
>is good for the economy, yet when it comes time to pay the bill for
>all that spending they lose control of the budget with phrases like,
>"Read my lips...." and the people get stuck with the bill. Then they
>leave the books for the Democrats to balance and maybe build up a
>surplus, which the Republicans end up throwing away on more spending
>and tax refunds when they regain control of the budget.

You've got the cycle right, but for the wrong reasons. Democrats,
enact social programs which cost money. They therefore have to raise
taxes to pay for them. High taxes piss off a lot of people, so they
vote the democrats out and the republicans in. The republicans slash
and burn the democrats programs, give people tax relief, and cut the
budget. Then people start to bitch that they want this program and
that program, and accuse the republican administration of being
"insensitive" to the needs of these whiny special interest groups, and
they vote in a slick talking democrat who will promise them the moon,
but neglect to inform them of what it will all cost. Then the cycle
repeats.

This administration has been the lone exception. Spending has been
ridiculous for a republican administration. But remember, we were
recovering from a recession which started with the stock market crash
at the end of Clinton's term. We also had 9/11, and we're fighting two
wars. Those are not normal circumstances.

>It's like none of them ever learned basic fiscal responsibility: when

>to better themselves with education, to work hard and make something
>of themselves.

You were right then. What happened?

>Then I got a look at the -real- world.

No, you were indoctrinated by a whiney left coast liberal.

>It just doesn't work that way, Dave.

Yes, yes it does. There is absolutely no reason why a person with
marketable skills cannot obtain a gainfully paying job. No one said
the path will be easy or the same for every person. But there is a
path. You just have to be willing to take it, and stay the course.

> You claim to live in the real world yet you know
>nothing about it. And I'm not going to explain this aspect of it to
>you. You have to go find out the facts for yourself -- assuming you
>want to continue to claim that you are in touch with reality.

Frank, I live in the real world, I observe real people, and am
particularly sensitive to the psychological aspects of how people
interact. There is no good reason you can give me, that will convince

me that any person, who is duly motivated, cannot achieve some level of financial independence. There is nothing magical, genetic, or special about people like Bill Gates, Donald Trump, Sean Fanning, or any number of other people who took dirt and made it into something.

Some people whine that they couldn't afford to go to college. Yet there are others who find a way to make it happen. Others whine that they're being discriminated against. Yet there are others in a similar group who achieve quite well. Then there are people who say that there are just no jobs out there for them. Then there are those who are willing to relocate to where the jobs are.

There are two kinds of people in this world Frank. Those who achieve, and those who make excuses why they won't.

If you have a defeatist attitude, you're doomed before you start. Part of the problem is that our culture has adopted an "Instant gratification" aspect. Whether it be in the things we buy or the path we choose to aspire to, we expect things to happen right away. There is little patience involved. If your circumstances dictate that you will not be able to earn a college degree for 10 years of night school, while working at Wal-Mart, then many people with little patience quit and then vote for a democrat who will give them food stamps. Those who stick it out, will eventually receive the rewards for their efforts. With today's technology, there are businesses that anyone with a computer can set up on line with virtually no overhead. There are people who make 6 figure incomes just by buying and selling items on E-Bay.

America truly IS the land of opportunity. But it's not the land of guarantees. You have to be willing to WORK for your success. Unless you have a physical or mental handicap, which prevents you from working, you have only yourself to blame if you don't succeed.

>>> (not to forget that 40% of
>>>wage-earners don't make enough money to pay income taxes and therefore
>>>didn't get Bush's 'tax rebate' that turned out to be nothing more than
>>>a loan).
>>

>-before- 9/11; Bush's plan was that the "rebate" would stimulate the
>economy enough that the cost of the rebates would come back in the
>form of increased tax revenue. The plan never worked before

Actually there are credible economic sources that claim that Bush's
tax rebate did lessen somewhat both the severity and the duration of
the recession. So it did work, to some degree.

>, but
>apparently Bush slept through that class in college (you and Bush sure
>have a lot in common).

Interesting side note. Apparently Kerry has finally released his GPA
for the years when he was at Yale. It seems that his GPA was WORSE
than Bush's. Imagine that.......

>>>Second, "fair share" is in reference to fat-cats and corporations who
>>>skip out of paying taxes through shelters, subsidies and a variety of
>>>other carefully legislated loopholes.
>>

>
>
>OF COURSE someone has to pay for it. Someone has to pay for every
>aspect of the government. Do you want it to be fair? Then boil down
>the cost of government per person and let -that- be the tax.

I tend to liken that approach to what happens when my work group
decides to celebrate some award or other activity at a local eating
establishment. We have 10 or 15 people, who all order different
things, some order appetizers and alcoholic drinks as well. The when
the bill comes, and because it's easy, they normally just take the
amount and divide it by the number of people, and everyone forks up.

The problem is that I usually end up paying $15 for a meal which in
reality should have cost me $8.50. I end up paying for those extra
appetizers and drinks that some of the other people ordered.

So much for "fair"

I'd much rather pay for what I use.

>If they
>can't pay it then send them to debter's gulag where they can work off
>their debt to the government. And don't forget to ship them off when

>>responsibility" thing again.

>Actually, it's almost verbatim from "Mein Kampf". Sterilize the weak
>so they are not a burden on society. Even better, just "sterilize"
>society, and that way you can eliminate the 'ghetto' stage.

Well, that's a far better solution then just letting people have
children, willy-nilly without having any practical means to support
them, and then expecting society to save them from their own mess.
Ultimately the children are the ones who suffer, and statistically,
children brought up in those situations rarely exceed the economic
status of their irresponsible parents (Another cliche for you: "The
apple never falls far from the tree"). Whether it's genetic of
environmental, the result is the same.

The philosophical question is: Should a person's right to procreate
deserve greater consideration than their responsibility to properly
care for their offspring?

>> Raising children is an enormous
>>responsibility both financial and emotional. Potential parents should
>>be ready on both counts before bringing another mouth to feed into the
>>world and then abdicating their responsibilities on to the rest of us.
>
>
>Zieg Heil!

Attempts to demonize a rational point about personal responsibility by invoking an emotional reaction through a vain attempt to make a poorly crafted and unrelated comparison to an evil regime in another place and time are just as bogus now, as when those who employ the same technique compare Bush to Hitler.

>>>It's also targeted towards
>>>the increasing senior population who will be SOL when the SS trust
>>>fund dries up in a few years

>
>> The
>>price is set by the lowest price that someone is will to sell it for.
>
>
>Wrong. It's set, as I stated before, by the laws of supply and demand.

That's too overly simplistic. Yes, what something is worth, is what
someone is willing to pay for it. And what someone is willing to pay
for depends on need (or the perception of "need"), and how available
the product is.

Now, forces of positive demand tend to force the price up, while the
forces of positive supply tend to force the price down. Competition,
acts to augment supply and therefore has a downward effect on price.
The company who sets the lowest price, is the one that the others must

match in order to remain competitive.

>Just because the curves intersect at one point doesn't mean the price
>is fixed -- there are variations in supply -and- demand based on a
>number of factors such as quality, geography, culture, perception.....
>or the tactic used by some companies to flood the market with cheap
>products in order to drive the competition out of business (which is
>why our cars run on gasoline instead of alcohol).

No, our cars run on gasoline because the amount of energy used to
produce alcohol exceed the energy output of the finished product. As
a result, it costs more to make alcohol than we could sell it for.

>>That is why competition is so important for a free market economy. If
>>there is only one source for a popular product, they can set

How does that prove that I never studies economics? I never stated
otherwise.

>Very basic terminology from
>Econ 101. And one more thing: the government -loves- to tax any
>product that is inelastic because it doesn't affect the demand for the
>product. That's why alcohol, tobacco and gasoline are taxed so
>heavily.

Oil is both elastic and inelastic depending on circumstances. When
there is a refinery fire, or a terrorist cell takes out an oil field,
or there's a labor strike in Venezuela, and the cost of gasoline goes
up, that is a result of a lowering of the supply relative to demand -
an elastic trait.

On the other hand, when the demand and the supply remain fairly
steady, and the price of oil jumps up because some clown at Goldman
Sachs predicts that oil could hit $100 a barrel, that's an increase
fueled (no pun intended) solely by investor speculation (And creating
a self fulfilling prophecy as a result), which is an inelastic trait.

>Looks like Japanese industry is looking out for American interests
>better than our own government.

No, the Japanese are looking to improve their profits. If they
"voluntarily" raise their prices, then the increased profit goes
directly to Toyota. If they wait until the US government places a
tariff, then difference will go to the US government.

There is nothing altruistic about Toyota's motives, trust me.

>So it's the Democrats fault that Bush can't overcome partisan
>politics? ROTFLMMFAO!!!!!

It certainly is to a large degree. Listen to the things that Howard
Dean is spewing as of late. He is the embodiment for the typical
liberal wing of the democratic party and their viewpoint as to anyone
who does not share their ideological vision.

The media is full of terse, shrill, and just plain adolescent level
rhetoric from the democratic side of the aisle. It's one thing to
disagree with someone ideologically. But to impugn someone's character
with the venom and vitriol that leading democrats have used in the
last 5 years is counterproductive and contemptible. They don't want to
compromise. They want it their way, and their way only. Consequently,
they can't understand why the majority of Americans have become
disillusioned with them as a party.

>
>
>First, look up the word 'pedigree'.

No need. My usage is consistent with the definition to the extent that
a company's "lineage" as applied to Mercedes Benz, can be compared to
someone's "lineage" in academic achievements. But if you prefer a
different word, I can accommodate. How about "Prestige"? Or
"Prominence"?

>Second, I can communicate my credentials (not my 'pedigrees') to a
>potential employer with my resume.

Yes, you can. But until you do, they have no way of knowing. YOU have
to sell yourself. A Mercedes Benz, on the other hand, sells by itself
due to their established reputation and company pedigree.

>Third, public perception only matters if the public is doing the
>hiring, such as making a choice between Bush or Kerry (both of whom
>had shitty grades in college, a fact which has been ignored by the
>press until just just recently for whatever reason).

Yet the image, and perception by many, was that Kerry was an
"intellectual", while Bush was a "country bumpkin". Yet Bush actually
advanced further in college.

That example outlines perfectly the effect that perception has on
altering the truth.

>Fourth, many academic institutions have reputations (not 'pedigrees')
>that speak to the benefit of the graduate. A graduate from Cal-Tech
>has a much better chance at getting hired than someone who passed a
>correspondence course advertised in a magazine.

Yes, and another case of perception. Someone from Harvard, or MIT,
would be assumed to have been better educated than someone from a
state college. Even though this perception does not address how the
individual did at those respective schools. Some could call this

"perception prejudice"......

>So what's the name of that tech school you claim to have attended,

Nice theory, but you can't swing that excuse in the real world. For example, take the layoffs GM just announced. Many are single parents with school age children who can not go back to school AND support a family. What should they do, Dave? They lost their well paying jobs and medical insurance for themselves and their children. If you were well educated in the world beyond eastern Pa., you would know what the employment scene is like in Detroit. You claim one can simply move away, but that is based on your own lack of education and not able to realize many can't move away for a myriad of reasons, such as caring for an infirm parent nearby in a care facility for but a single example. More children are now caring for parents than in any other time in our history. Many have taken out home equity loans to pay for health care and prescription coverage that they lost through no fault of their own. There is an entire contingency in many demographical areas of the US in which many are trapped in a sort of financial snare. People like you usually get what is coming in the end and karma, luck, divine intervention, whatever, will dictate you end up just like those you blame for being poor, black, queer, liberal, etc. In fact, your daughter may quit school, commonly become pregnant to an African-American or three, have many children and volunteer at the ACLU before realizing she is a lesbian and needs a job to pay the attorney for the crack and prostitution charges.

>Thank you for conceding my point. And with a perfect example.

And to expand further on your point, you left out the part about the
reduction of average income of American workers as a result of lost
jobs, thereby reducing overall spending in the economy (-including-
the sales of cheap imported products), shifting more people into the
no-tax bracket and -increasing- the tax burden on everyone else. So
before you whine yet again about paying someone else's share of the
tax burden, take a look at where you shop.

>>> The
>>>price is set by the lowest price that someone is will to sell it for.

Gee, I guess that explains why there is such a variation in gas prices
in every town -- even within the same neighborhoods.

>>Just because the curves intersect at one point doesn't mean the price
>>is fixed -- there are variations in supply -and- demand based on a
>>number of factors such as quality, geography, culture, perception.....
>>or the tactic used by some companies to flood the market with cheap
>>products in order to drive the competition out of business (which is
>>why our cars run on gasoline instead of alcohol).
>
>No, our cars run on gasoline because the amount of energy used to
>produce alcohol exceed the energy output of the finished product. As
>a result, it costs more to make alcohol than we could sell it for.

Wrong again, Dave. The recommended fuel for the Model T was alcohol,
and that's what automobiles were built to use back in the early years
of their history. And it was great because there were a whole bunch of
backyard stills that were pumping out gallon after gallon of good ol'
moonshine. But along came a big foreign oil company that decided to
take a risk by dumping cheap gasoline on the market (at a net loss), a
move which shut down the stills and convinced auto manufacturers to
build their engines to run only on gasoline. Afterwards they pushed
the gas prices up, and the oil companies not only recovered their
losses but established a dominance of the market. -That's- why our
cars burn gasoline, and -that's- why we are paying so much at the
pump.

If, back in the early 1900's, the alcohol producers were able to stay
in business (in a fair and competitive market, protected by import
tariffs) they most likely would have developed the technology to
produce much cheaper alcohol, technology that is only -now- being
developed. We now know that fuel-grade ethanol can be produced cheaply
on a large scale using specially developed yeasts & enzymes and vacuum
distillation, but there are no 'refineries' large enough to make it
profitably. Also, alcohol comes from vegetable bio-mass, meaning the

energy in alcohol comes from the sun which is both renewable and
virtually inexhaustible. Now the US is one of the most agricultrually
efficient countries in the world; if the demand was there it wouldn't
take long to develop new types of corn or sugar beets (or some other
crop) specifically bred for high-yield alcohol production. All this
could have happened within the past eighty years had it not been for
unfair import trade practices in the early 1900's. But it didn't, and
now -we- have to pay for the mistakes made by the government all those
years ago.

Now are you so nearsighted that you can't see what's going to happen
to our progeny in the future just because you want to save a couple
bucks by buying a cheap Chinese toilet-paper dispenser? Or do you
-like- the idea that -we- are actually helping China become the next
globally-dominant economic superpower?

Those who don't learn from history are doomed to repeat it. I learned
my history, Dave. You need to go back to school.

>>>That is why competition is so important for a free market economy. If

>a self fulfilling prophecy as a result), which is an inelastic trait.

Wrong again. Oil is inelastic because the -demand- remains constant
-regardless- of the price. If you can't even grasp a simple concept
like price elasticity then you really shouldn't be talking economics.
But I keep forgetting -- you have some intrinsic need to publically
humiliate yourself by demonstrating your ignorance.

>>Import tariffs interfere with a free -international- market,
>
>Hello McFly! We now live in an international GLOBAL market. Get used
>to it!

Nations have been trading with each other for thousands of years,
Dave. International economics isn't a new concept. The fact is that
there is, and has always been, both an 'international' economy and a
'domestic' economy (from the perspective of the US border that would
be Macro- and Micro-economics, respectively). For the past century the
international economy has been carried by the US at the expense of the
domestic economy. But now our domestic economy simply can't carry the
financial burden of the planet much longer. It's time to quit handing
out international welfare checks, focus on -our- economy, and let the
other countries either sink or swim on their own merits.

>>and
>>that's the intent: when the international market starts to hurt the
>>domestic market, you establish import tariffs. It's been done for
>>hundreds of years and it works pretty darn well. And in case you
>>didn't notice, Toyota has offered to raise the price of their cars so

>>GM can stay competitive (and in business) in the domestic market. The
>>reason given was that low import prices hurt the American economy (the
>>recent GM layoffs) and is therefore bad for US/Japanese relations.
>>Looks like Japanese industry is looking out for American interests
>>better than our own government.
>
>No, the Japanese are looking to improve their profits. If they

>directly to Toyota. If they wait until the US government places a
>tariff, then difference will go to the US government.
>
>There is nothing altruistic about Toyota's motives, trust me.

Except that they made the announcement with an explanation that opened
the door for the US government to establish import tariffs -without-
Japanese retaliation. That takes balls. But of course their motives
are not altruistic because if GM moves it's plants to a country with
cheaper labor then it threatens to become more competitive, something
Toyota doesn't want. They also understand that the auto industry is
big business in the US, so if the industry goes under then our economy
suffers, and consequently so do the sales of -their- products in the
US. -They- know it's financially responsible to keep a trade balance.
But for some reason the Bush administration would rather let Japanese
car makers control the US economy instead of doing it themselves.

>>I'll make this as simple as I can: If a country outsources almost all

You don't get it, Dave -- Bush claimed he would overcome partisan
politics but blames the Democrats because he can't. That's like a car
mechanic saying that he can fix an engine, but then complains that he
can't fix it because it's broke. What an idiot! (And BTW, that was an
analogy, not a metaphor.)

>>WTO or NAFTA.
>
>True. But are you willing to bet on our survival in the global market
>against the combined interests of the rest of the industrialized
>world?

Where, in any of my ramblings, did I ever suggest that the US should
economically isolate itself from the rest of the planet? I didn't. You
have to strike a balance between international and domestic economics,
which right now is horribly unbalanced. One strong indicator that
would show if things are improving would be a reduction (or complete
neutralization) of the trade deficit. But that isn't happening -- on
the contrary, the trade deficit just keeps getting bigger. That's bad
economics, Dave.

>>We can pull out just like Bush pulled out of the Kyoto
>>accord. And another fact is that if the US pulls out of the WTO or
>>NAFTA then there will -still- be international trade for the simple
>>reason that the US has money and foreign companies want it.
>
>Are you so sure about that?

Yep.

> What do we make that they can't? (and
>cheaper).

Not 'cheaper', Dave -- just economically competitive.

> And what happens when we can no longer import oil? Are you
>willing to drag this country down to the brink of economic depression
>in order to restart it as it was 50 years ago?

Say what? 50 years ago the US was at the height of an economic boom.

>> And yet
>>-another- fact is that you have an extremely limited understanding of
>>economics.
>
>No, I see the global picture. You're still living with a 1950's view
>of the world and the dynamics of the global marketplace.

Money is money, people are people, and economics has been a functional
part of civilization for as long as there have been both people and
money. If you think that you have any better view on economics than
what has been learned in the past few thousand years then by all means
run for president.

>><snip>

>>>there. But the public perception isn't necessarily there as well.
>>

>>
>>First, look up the word 'pedigree'.
>
>No need.

Yet you did at my prompting.

> My usage is consistent with the definition to the extent that
>a company's "lineage" as applied to Mercedes Benz, can be compared to
>someone's "lineage" in academic achievements.

LOL! Spin away, Dave!

> But if you prefer a
>different word, I can accommodate. How about "Prestige"? Or
>"Prominence"?

Let's see if either of those words work:

"....unless you worse a shirt that said "I went to a 4 years college,
hire me", you would have to prove your prestige."

"....unless you worse a shirt that said "I went to a 4 years college,
hire me", you would have to prove your prominence."

Naw, they just don't sound right. Try again, Dave. Even better, try
using the right word the first time.

>>Second, I can communicate my credentials (not my 'pedigrees') to a
>>potential employer with my resume.
>
>Yes, you can.

Nuff said.

> But until you do, they have no way of knowing. YOU have

>advanced further in college.
>
>That example outlines perfectly the effect that perception has on
>altering the truth.

And once again you missed the point: If I was being hired by the
public then I might care if people know I have a better education than

'the other guy'. But I'm not running for office. The only person that has any need or desire to know my credentials is any prospective employer that would already have my resume.

>>Fourth, many academic institutions have reputations (not 'pedigrees')

You're a kick, Dave -- you just shot down your own argument!!!

>>So what's the name of that tech school you claim to have attended,
>>Dave?
>
>N.O.Y.F. Business University.

Why not just admit the fact that you never attended -any- tech school or college? You're about the same age as me, but you still haven't learned that honesty is more credible than self-aggrandizing lies? That's why I have credibility and you don't -- I freely admit that I graduated from a state university and not Cal-Tech; that I work as a bartender and no longer as an EE at a radio station (and even that I was unemployed for a while); that I don't make gobs of money or have more time on my hands than someone who claims to have a family and a high-paying job. I even admit that I'm fat (although I'm now down to 225, which is a significant improvement from last year -- mowing lawns not only helps with the bills but also with the health!).

Yet you, Dave the Braggart, whose name and address are public information that's readily accessible on the internet, can't even admit where you went to tech school. Ok, Dave, whatever you say.

>><snip>

And I implied nothing of the sort. In fact, you just helped make my
case for me -- admitting that marriage isn't taken nearly as seriously
by the general public as you would like everyone to believe. People
-do- get married for the wrong reasons. People -do- get divorced.
People -do- remarry (many times resulting in excommunication). Some
people -do- get married more than once, twice,.... sometimes even four
or five times or more. And in almost all of those marriages each
person took an oath that included "until death do us part". And some
people don't even get married at all -- they live together, have kids,
raise a family and retire without ever exchanging vows.

The fact is that marriage simply isn't taken seriously enough by
people to justify calling it a "sacred tradition" either by law or by
any religious standard.

>Proof please.

Sure, just as soon as you come up with proof that has been asked of
you for numerous claims you have made over the past several months. Or
you could look for the proof yourself. But that would be pointless
because if you can't find it, you characteristically conclude that it
doesn't exist, which is especially lame when your only resource is the
internet. And even -then- your research consists of a few common words
in a google search, followed by abandonment of your search because you
get discouraged at the high number of results.

So unless you are going to start providing some facts to support your
many claims, don't beg me for any more proof.

>republican led majority in congress, slashed pork, wasteful spending,
>and government programs which resulted in the balanced budget that
>"Slick willie" Clinton tried to take credit for, and laid the
>foundation for the tax cuts that Bush gave back to every taxpayer.

In case you didn't notice, Newt was the lone Republican proponent of a
balanced budget amendment, which is why he was publically trounced and
bounced from Congress. If you go back and look at the votes, most of
the Republicans voted -against- the balanced budget during the Clinton
years. The Democrats forced a few Reps to fold on the balanced budget
in exchange for a little district money because Clinton, unlike Bush,
wasn't afraid to veto a budget bill with higher deficit ceilings and
packed with Republican pork-barrel spending. And if the Reps -really-
wanted a balanced budget amendment to the Constitution it would have
passed with almost a unanimous vote because the Dems have been pushing
for it for years. But it didn't even get to the floor. So quit with
the spin and stick to the facts, Dave. Start your education on the
subject by learning about the Graham-Rudman-Hollings Act.

>> Republicans spend like they are
>>on a Bloomingdale's shopping spree! They claim that all the spending
>>is good for the economy, yet when it comes time to pay the bill for
>>all that spending they lose control of the budget with phrases like,
>>"Read my lips...." and the people get stuck with the bill. Then they
>>leave the books for the Democrats to balance and maybe build up a
>>surplus, which the Republicans end up throwing away on more spending
>>and tax refunds when they regain control of the budget.
>
>You've got the cycle right, but for the wrong reasons. Democrats,

>enact social programs which cost money. They therefore have to raise
>taxes to pay for them.

So that's why Medicaid spending grew 13.2 percent in 2002, the steepest rate of growth since 1992? Because Democrats were at the helm? I really think you got your facts backwards, Dave.

Democrats (-and- Bush Sr) had to raise taxes in order to pay for Republican spending sprees -- that's a FACT! Reagan spent jillions on the military and ran the deficit higher than it had ever been before, even during wartime. Daddy Bush lost re-election because he got stuck with the bill. Although Clinton was a crappy leader, he had some decent economic advisors that bailed out the country. And now Baby Bush has pushed the budget back into the infra-red. Yet you think Democrats raise taxes just to pay for social programs? You are TOTALLY CLUELESS, Dave! For God's sake, get an education!

> High taxes piss off a lot of people, so they
>vote the democrats out and the republicans in. The republicans slash
>and burn the democrats programs, give people tax relief,

"Read my lips...."

> and cut the
>budget.

HA! What a load of horse-hooey! So what year did the Republicans cut the budget, Dave?.... aw, the heck with it. You want proof? Here you go:

Reagan/Bush:
The Federal deficit jumped from $73.1B in 1980 to $237.9B in 1986. The Federal debt jumped from $711.9B to $1,740.6B in that same time frame. By the time he left office the Federal debt was $2,051.6B. By the time Daddy Bush left office it was $2,999.7B and the deficit had risen to $340.4B. Just a quick summary:

1980.....Deficit = $73.1B.....Debt = $711.9B
1992.....Deficit = $340.4B.....Debt = $2999.7B

Change...Deficit ^ $267.3B.....Debt ^ $2287.8B

Both increased more that 400%!!!

Clinton:
By 2000, and for the first time in over 50 years, there had been a budget SURPLUS for not just one but TWO YEARS. Clinton left office with a SURPLUS of $86.3B, and was in the process of reducing the Federal debt. He had also halted the increases in discretionary spending, one of the hallmarks of the Republican party.

Bush Jr:
Since Baby Bush took office (as of the end of 2004), discretionary spending has almost doubled, program spending has increased by almost

half, the surplus went bye-bye and was replaced with a deficit of $567.4B (an increase of more than -twice- the deficit at the end of the Reagan/Bush years) and the debt had increased to an all-time high of..... are you ready for this?..... $4,295.5B!!! Just the INTEREST on the debt is $160.2B.

Is that enough proof for you? Do you still think the Republicans are cutting the budget like they claim? Or are you going to wallow in your ignorance and try to spin the cold, hard facts?

> Then people start to bitch that they want this program and
>that program, and accuse the republican administration of being
>"insensitive" to the needs of these whiny special interest groups, and

>path. You just have to be willing to take it, and stay the course.

When are your parents ever going to kick you out of their trailer,
garage, basement, or whatever emotionally secure little fortress of
social isolation you have built around yourself? Isn't it about time
you light a fire, haul your fat ass out that chair and into the -real-
world so you can actually learn something about it instead of making
wild speculations, adopting internet fantasies, and making up excuses
why you can't experience it firsthand?

>> You claim to live in the real world yet you know
>>nothing about it. And I'm not going to explain this aspect of it to
>>you. You have to go find out the facts for yourself -- assuming you
>>want to continue to claim that you are in touch with reality.
>
>Frank, I live in the real world,

No you don't. You don't have any idea what happens in the real world,
just like you don't have any idea what is taught in college, or how
economics works, or how the government works, or any of the other
dozen or so claims you have proven are nothing but lies. You may get
to the store if you take an extra dose of Paxil, and you might have a
driver's license, but your mind is existing in it's own little fantasy
land devoid of facts or social interaction. That's why you can't break
away from your codependent relationship with your mommy -- life is
just too hard for you to make it on your own, isn't it? Poor baby.
It's sure a good thing that your neocon brothers are there to change

your diaper and powder your bottom, ready to hand you a pacifier every time some liberal gets you all upset. Just like a Baby Bush clone.

Well, take a nap, Baby Bush clone, because it's time for me -- the big, ugly ex-Marine who risked his life and gave up four years of it just so you could be coddled in adulthood by your mommy, the engineer who is educated at a level that you think you can fake with info from the internet, the liberally-slanted conservative that worked for several years at a radio station which broadcasts nothing but the news, the bartender whose job demands a diversified understanding of social, ethnic and cultural issues, the guy who has never drawn a single dollar of unemployment benefits or a welfare check (assuming such benefits were available to an able-bodied male such as myself, which they aren't, or hadn't you ever thought of that?), the newsgroup junkie who has pretty much destroyed your academic credibility for you and your posterity -- to go earn a living. Maybe some day you can earn a living, too. But probably not. Just stay home with your mommy and live your life through the TV and computer so the real world doesn't have to deal with you.

But just to be fair, at least you are useful in one way -- you provide great entertainment while I waste time before I go to work. Too bad you don't get paid for it.

334. question please

Newsgroup: rec.radio.cb
Date: 2005-06-10 04:04:32 UTC
From: The Tube Man <thetubeman@earthlink.net>
Message-ID: <kj8qe.1777$eM6.782@newsread3.news.atl.earthlink.net>
Source record: 201220

On many of the older tube type base radios, there is a capacitor (like a 4uf) on each the pins of the mic connector...like on a 4 pin mic male connector there might be 4 each caps, wired in series, with a leg of the cap wired to one of the pins with one leg of the caps going to ground.

Question is:
1-why is this done
2-what is this suppose to do
3- if the caps are not used what will be the outcome

Thanx!!

I'm at an age now where I'm fighting the nostalgia of old rigs and
technology, with trying to keep current with new technology. Ham radio
used to be at the forefront of technology. Now it's lucky if it can
just keep up. But my nostalgic side thinks that's just fine. I still
get a warm fuzzy just sitting next to an old tube rig on a cool
morning tuning through when the band is just waking up. I doubt if
digital modes will ever replicate that feeling for someone in my
generation or older.
But for someone in their 20's who's never known the old stuff, now is
the time to blaze those digital trails.

>>

I've heard the same thing echoed from many hams. I've known hams who have religiously made the trek to Dayton every year, and now talk of this being their "last year". I guess it's a shell of its former self. Talk like this is certainly not making me want to experience it again any time soon.

That's pretty much the impression I take away from what I've read as
well.

>There is no shame when cheap sobs who want more money for electronic
>garbage and cell phones than the junk is worth are forced to compete
>with more widespread and saner prices.

It never fails to amaze me the audacity that some hams have when
trying to sell something. Some people clearly have no concept of the
term "depreciation". I saw a guy once trying to sell a 25 year old
crystal controlled 2 meter rig for $20 less than what it sold for new.
It was not a collectors item either. But he felt that since he was the
original owner, it was in good condition, and he still had the
original box for it, that he could get that price. I was not surprised
to see, at the end of the day, that the radio was still on his table.

>infirm parent nearby in a care facility for but a single example.

Most people have large extended families. I know the concept of family
has become somewhat foreign with today's younger generation. No one
branch of a family should be made to bear the burden of such hardships
themselves. People lean on the internal support of the family for
temporary hardships. A strong family negates the need for the
government to stick its nose into it (At other people's expense).

> More
>children are now caring for parents than in any other time in our
>history. Many have taken out home equity loans to pay for health care
>and prescription coverage that they lost through no fault of their own.

Yes, and those who are ambitious will pay it all back when they adjust
to their situation and find a new vocation.

>There is an entire contingency in many demographical areas of the US in
>which many are trapped in a sort of financial snare.

Well, if you live in a town where 80% of the people work at "the
factory" and that factory closes up, well yea the town's in a real
pickle. That's why an intelligent person looks to live in an area
where alternate employment id plentiful, and diverse commerce is well
established. That way, no one layoff can cripple a significant portion
of the population. That's one of the reasons why I still live where I
do. I was once contemplating a move to both Florida and North
Carolina. But the lack of diverse skilled jobs and much lower pay
scales pretty much nixed that move.

> People like you
>usually get what is coming in the end

Yes, we tend to survive, because we don't look to other people to
blame, or to the government for help. That's what self sufficiency and
personal responsibility are all about.

> and karma, luck, divine
>intervention, whatever, will dictate you end up just like those you
>blame for being poor, black, queer, liberal, etc. In fact, your daughter
>may quit school, commonly become pregnant to an African-American or
>three, have many children and volunteer at the ACLU before realizing she
>is a lesbian and needs a job to pay the attorney for the crack and
>prostitution charges.

Not likely because she will have grown up in a solid supportive family
that helps each other and promotes open communications and a strong
work ethic with solid morals. And I have taken enough steps to ensure
that she will not have to bear the financial burden of taking care of
me when I'm old and infirm.

I'm only 45, and if I lost my job tomorrow, I'd be able to live
comfortably for 4 years without another job, and before I have to
worry. If I take a job at half the pay, that number doubles. If the
wife also goes back to work, that number increases. If I liquidate
some assets, that number increases even more. Before you know it, I'll
be at retirement age, and my pensions will kick in, not to mention my
401K.

Have you planned for financial hardship? What's your excuse not to?

Dave

We have one. Once the economy fully turns around. Deficit spending
kicked the economy into high gear when Reagan did it in the 1980's.
The resultant economic boom erased the deficit and provided a surplus.
There is no reason to believe that the same won't happen now.

>
>You have just jumped into the deep end, Dave. Get help.

Your refusal to see the truth for what it is, beyond the blinders that your left coast education have taught you does not negate it for those of us who aren't so blind.

Democrats have historically tried to play the race card, the class card, and the gender card when it suits them as a level to achieve their political goals. If it suits them to accuse republicans of being racist (Even though it was southern democrats who most opposed the civil rights bill) they do it. If it suits them (and it seemed to have worked on you) to demonize the wealthy and successful in this country as somehow not worthy of the fruits of their labors, and somehow responsible for the predicament that the poor are in (The flawed concept that someone cannot be rich, without another person having to become poor), they will do it. Conservatives who oppose abortion on the very moral reason that it is killing, are branded as opposing a woman's right to choose. Yet those same democrats who champion a woman's right to choose an abortion hypocritically oppose the death penalty for convicted killers and rapists. These same democrats who hypocritically champion choice, sit in opposition to the 2nd amendment's right to bear arms, or a family's right to choose which public funded school to send their kids to.

>>Democrats are popular with those who take.
>>Republicans are popular with those who MAKE.
>
>
>And you are popular with those who make repetitive moaning sounds
>while banging their heads against a padded wall. Seriously, Dave, get
>some perspective.

Frank, as is typical with you, when you can't argue the points, you resort to insult. The one who needs perspective is you. You think that government should replace God as the savior of your soul and the great protector of the people (But at the same time oppose their efforts to better clamp down on domestic terror). You favor safety net dependency rather than pushing for financial independence and personal responsibility. You want to keep the government training wheels on every citizen's bikes, thereby never fully allowing them to truly achieve anything. For if and when they start to, you also want the government to increasingly tax them. That's why socialism is a failed ideology. Socialism promotes mediocrity, by removing incentives to better one self. If everyone is treated equally, there is little incentive to advance, as the rewards are greatly diminished.

Frank, you need to get away from the left coast and see how real people live, and stay away from the "Starbucks liberals"

>
>
>Really? Then why have you been saying for months that poor people just
>want to kick back and leech from others through welfare checks, food
>stamps and other social handouts?

Some poor people do. They've known little else. They were born into
welfare families, so that's what they've been indoctrinated into
thinking is their "career" path.

But the "working poor" truly want to be productive, and will put in a
hard days work. But for whatever reason they chose not to pick a
career path that would return a greater financial reward for those
hours worked.

The ONE social program that I favor is universal education or
vocational training. Provide the tools to everyone so that they can
pull themselves up from their boot straps, and get a "real" job. That
way, anyone who's still flipping burgers or sweeping streets is doing
so by their own actions (or more accurately inactions). Ambitious
people can do it already, but universal education will remove all
remaining excuses for failure.

>You are clearly in a state of meltdown.

I could see how your rose colored glasses would show me in that light.
But trust me, it's an illusion that 's strictly in your mind only.

>bounced from Congress.

You need to get your history in order. Newt was "bounced" from
congress after a democratic led smear campaign over an alleged ethics
issue. In fact, it's pretty much common speculation that this event is
what prompted a retaliation against Clinton, with the Monica Lewinsky
scandal.

> If you go back and look at the votes, most of
>the Republicans voted -against- the balanced budget during the Clinton
>years.

Yea, Clinton's budget. But they backed their own version, which
included better cuts.

> The Democrats forced a few Reps to fold on the balanced budget
>in exchange for a little district money because Clinton, unlike Bush,

>packed with Republican pork-barrel spending. And if the Reps -really-
>wanted a balanced budget amendment to the Constitution it would have
>passed with almost a unanimous vote because the Dems have been pushing
>for it for years.

That's a load of crap Frank! Democrats love to spend. In fact, when
the budget surplus was finally realized, the first thing congressional
democrats wanted to do, was create more social programs. Clinton,
always the smooth and savvy strategist, suggested using the surplus to
pay down the debt and bail out social security. His message resonated
with the American people, and the democrats in congress were forced to
back away from their initial spending ideas.

Republicans favor increased spending on military and defense. In most
other areas, republicans favor cuts.

> But it didn't even get to the floor. So quit with
>the spin and stick to the facts, Dave.

As opposed to your relentless left wing spin? You "facts" are just
plain wrong Frank.

>>You've got the cycle right, but for the wrong reasons. Democrats,
>>enact social programs which cost money. They therefore have to raise
>>taxes to pay for them.
>
>
>So that's why Medicaid spending grew 13.2 percent in 2002, the
>steepest rate of growth since 1992? Because Democrats were at the
>helm? I really think you got your facts backwards, Dave.

That's one of the things that I am very much disgusted with Bush on,
and that's the expansion of the medicare prescription program. That's
going to cost an arm and a leg, and illustrates why sensible people do
not want the government involved in paying for healthcare.

I believe that Bush did it simply to remove it as a platform item for
democrats. A strictly political move. A bad one IMHO.

>Democrats (-and- Bush Sr) had to raise taxes in order to pay for
>Republican spending sprees -- that's a FACT!

It's a fact that the democratically controlled congress raised taxes.
Bush Sr. was coerced into signing it, under threat on not having any
of his bills passed through.

> Reagan spent jillions on
>the military and ran the deficit higher than it had ever been before,
>even during wartime.

And the economy recovered from "Stagflation" and when it rebounded
the deficit recovered.

There is no evil in deficit spending, when you understand how it
works. But it seems like you don't.

> Daddy Bush lost re-election because he got stuck
>with the bill.

Yes, plus the involvement of Ross Perot, syphoned away many would-be
republican votes.

> Although Clinton was a crappy leader, he had some
>decent economic advisors that bailed out the country.

Clinton was a very skilled and savvy leader. He knew how to manipulate
people to get what he wanted. He was also a skilled orator, and could
make his case to the American people like no other since Reagan. But
Clinton know that (After 1994) that he would have a fight in congress,
so he coopted many republican ideals. Things like welfare reform, and
trimming government spending were all republican initiatives. Clinton
successfully co-opted them and managed to take the credit for them

> And now Baby
>Bush has pushed the budget back into the infra-red.

And like the Reagan years, when the economy fully recovers, the
deficit will shrink (again!).

>Yet you think
>Democrats raise taxes just to pay for social programs?

That's pretty much their standard modus operandi. Look into a little
history. Preferably history that was written before the liberals
started trying to rewrite it. Books published before the 1970's should
be safe.

>You are TOTALLY
>CLUELESS, Dave! For God's sake, get an education!

All you accomplish Frank is to illustrate just how obviously biased
you truly are.

>> High taxes piss off a lot of people, so they
>>vote the democrats out and the republicans in. The republicans slash
>>and burn the democrats programs, give people tax relief,
>
>
>"Read my lips...."

No new taxes. Unless of course the democratically controlled congress,
forces me into a no-win situation......

>> and cut the budget.
>
>
>HA! What a load of horse-hooey! So what year did the Republicans cut
>the budget, Dave?.... aw, the heck with it. You want proof? Here you

>---
>Change...Deficit ^ $267.3B.....Debt ^ $2287.8B
>
>Both increased more that 400%!!!

The national debt is separate from the government budget. Don't tell
me you are one of those people who think that the budget surplus that
we had in 2000 also meant that the national debt was also erased?

>Clinton:
>By 2000, and for the first time in over 50 years, there had been a
>budget SURPLUS for not just one but TWO YEARS. Clinton left office
>with a SURPLUS of $86.3B, and was in the process of reducing the
>Federal debt. He had also halted the increases in discretionary
>spending, one of the hallmarks of the Republican party.

Bush had to deal with a democratically controlled congress. Clinton
had to deal with a republican controlled congress. Which ultimately
has more power in passing spending budgets?

>Bush Jr:
>Since Baby Bush took office (as of the end of 2004), discretionary
>spending has almost doubled, program spending has increased by almost
>half, the surplus went bye-bye and was replaced with a deficit of
>$567.4B (an increase of more than -twice- the deficit at the end of
>the Reagan/Bush years) and the debt had increased to an all-time high
>of..... are you ready for this?..... $4,295.5B!!! Just the INTEREST on
>the debt is $160.2B.

And when the value of the dollar increases, and the economy turns
around, that number will shrink almost like magic.

>Is that enough proof for you?

What proof? I saw no reference source given.

> Do you still think the Republicans are
>cutting the budget like they claim? Or are you going to wallow in your
>ignorance and try to spin the cold, hard facts?

Right now no. There's a war to fight and that typically costs a lot of
money. But they are cutting funding to other programs.

>> Then people start to bitch that they want this program and
>>that program, and accuse the republican administration of being

Ah, more ad-hominem (Another logical fallacy by the way), attacks in
lieu of countering the points (Which you can't).

>Isn't it about time
>you light a fire, haul your fat ass out that chair and into the -real-
>world so you can actually learn something about it instead of making

>wild speculations, adopting internet fantasies, and making up excuses
>why you can't experience it firsthand?

I think you spent way too much time in that back room minding that radio transmitter and getting exposed to high levels of RF radiation. I am not the one who lives in a fantasy Frank, you are. Travel somewhere east of the rockies and live with real people (Preferably not in a major city) for a while and see what is really going on.

>>> You claim to live in the real world yet you know
>>>nothing about it.

According to you, a self professed "child prodigy" in college, master of electrical engineering, logic, psychology and economics, who curiously works as a bartender in one of the most liberal areas in the country.

>>> And I'm not going to explain this aspect of it to
>>>you.

Because you can't. You have no life experiences save for your reluctant service in the military. You have had no serious relationships, prefer to be a loner, and consider people with a healthy family life to be some sort of psychologically defective "co-dependant" relationship. You have renounced God, accept the existentialism concept of "This is all there is", and are pretty much ready to just cash in the chips. I'd say you need some therapy Frank.

>>> You have to go find out the facts for yourself -- assuming you
>>>want to continue to claim that you are in touch with reality.

I live, interact, and more importantly, work in a field that is very much in touch with the needs and wants of the consumer. THAT is reality Frank. You probably don't know it, but you likely have something in your house (or shack) that I had a part in the development of.

>>Frank, I live in the real world,

>No you don't. You don't have any idea what happens in the real world,
>just like you don't have any idea what is taught in college, or how
>economics works, or how the government works, or any of the other
>dozen or so claims you have proven are nothing but lies.

Because YOU disagree with me? YOU who thinks that the 1st amendment of the Constitution calls for the separation of church and state in all government dealings. Even though in no place do those words ever appear.

> You may get
>to the store if you take an extra dose of Paxil, and you might have a

Oh yea, no doubt about it, Ebay is still king of the hill, but that may change with yahoo dropping all their fees. I've noticed dual auctions running on each at the same time for the same product. I'm sure you also probably noticed a surge in Ebay auctions that do not complete. A very convenient way out for sellers on Ebay lately has simply been a decision to end their auction early, Ebay requiring no explanation or reason from the seller.

Nice theory, but you can't swing that excuse in the real world.

>Sure you can. You only have to want it bad

>enough.

For
example, take the layoffs GM just announced. Many are single parents
with school age children who can not go back to school AND support a
family.

>Why are they single parents in the first place?

Such has nothing to do with the layoffs, but death is one reason why
many are single parents.
What should they do, Dave? They lost their well paying jobs and medical
insurance for themselves and their children.

>Job retraining is usually available for people

>displaced by layoffs.

In Detroit for GM workers? Who pays for that?
You need to realize many can't move away for myriad of reasons, such as
caring for an infirm parent nearby in a care facility for but a single
example.

>Most people have large extended families.

Most? How you figure that?

> I know the concept of family has become

>somewhat foreign with today's younger

>generation. No one branch of a family should

>be made to bear the burden of such hardships
>themselves.

You are assuiming all families share your core beliefs. They do not.
This country is a melting pot of so many value systems and beliefs that
you will never have families all sharing the same.

> People lean on the internal support of the

>family for temporary hardships.

We're not talking emotional or physical, we are talking financial.

>A strong family negates the need for the

>government to stick its nose into it (At other

>people's expense).

I know many strong family units who would die for each other. That
doesn't mean one has the financial means to provide a solution for
another's misfortunes, especially when catastrophic health issues arise.
More
children are now caring for parents than in any other time in our
history. Many have taken out home equity loans to pay for health care
and prescription coverage that they lost through no fault of their own.

>Yes, and those who are ambitious will pay it

>all back when they adjust to their situation and
>find a new vocation.

Many are disabled or seniors and can't work. MANY. Surely you aren't
presenting the idea that all those without health care can simply
"adjust". You are assuming these people can all work when a great number
of them, esecially in Florida are seniors with a host of health
problems. What is your solution to this very large group?
There is an entire contingency in many demographical areas of the US in
which many are trapped in a sort of financial snare.

>Well, if you live in a town where 80% of the

>people work at "the factory" and that factory

>closes up, well yea the town's in a real pickle.

All towns have a major employer.

>That's why an intelligent person looks to live in
>an area where alternate employment id

>plentiful, and diverse commerce is well

>established.

You are focusing on a select group of healthy individuals. The number of those without health care (seniors included) far outnumber those healthy workers who get laid off.

>That way, no one layoff can cripple a

>significant portion of the population.

Depends what you consider a significant portion of the population. I can think of several examples..Reagan importing cheaper metals from the Asians decimated the steel industry in Pa and Ohio. In many of those industry towns, this led to the closing of the mills and a significant layoff of those town's populations and many of those towns became ghettos or ghost towns because of that. Same can be said with coal mining and to a certain extent, the auto industry. History repeats itself.

>That's one of the reasons why I still live where

>I do. I was once contemplating a move to both
>Florida and North Carolina. But the lack of

>.diverse skilled jobs and much lower pay

>scales pretty much nixed that move.

Lack of diverse skilled jobs? When was the last time you checked the stats? Florida has led the country in adding new jobs and has not felt the inflation the country has felt the last so many years. The pay here was always offset by the lower cost of living. The only people that have trouble adjusting are those who live beyond their means.

_
 People like you
usually get what is coming in the end

>Yes, we tend to survive, because we don't

>look to other people to blame, or to the

>government for help.

What about this job retraining you speak of? Who pays for it?

>That's what self sufficiency and personal

>responsibility are all about.

Looking to the government for assistance is perfectly acceptable in many instances, Dave. There are thousands and thousands and thousands of people STILL homeless in Fl because of the hurricanes. Many of the major insurance companies are STILL unable to pay for their customer's claims. If it wasn't for the government assistance (what you always refer to as "handouts") with food, water, shelter, etc., these folks would be on the welfare tit. Now please 'splain how being self-sufficient and personally

responsible can help these folks who paid their premiums on time faithfully all those years, had their homes destroyed or damaged to the point they are rendered unsafe for living conditions, lost all their possessions, yet still manage to survive by living in tents, can bring them up out of their hell created by the insurance companies who are regulated by the federal government.You really have no clue the magnitude of damage these storms had on many people in Florida. There are so many hardworking people that are struggling just to feed their kids, living in tents, and waiting for the federal government to crack down on the insurance companies and make them ante up. To suggest these fine families are anything less than responsible or self-sufficient shows you haven't a clue, Dave. On the contrary, I will lay odds these folks are illustrating survival skills and grit that you couldn't handle. Many of these folks have been living out of doors, literally, for almost a year and cooking on fires or grills. Try this for a year, Dave, then you -may- be qualified to speak of what these people should and shouldn't do.

_
and karma, luck, divine
intervention, whatever, will dictate you end up just like those you blame for being poor, black, queer, liberal, etc. In fact, your daughter may quit school, commonly become pregnant to an African-American or three, have many children and volunteer at the ACLU before realizing she is a lesbian and needs a job to pay the attorney for the crack and prostitution charges.

>Not likely because she will have grown up in a
>solid supportive family that helps each other

>and promotes open communications and a

>.strong work ethic with solid morals.

What the hell does that have to do with having children to another race? You can tell you are about to tread in unfamiliar parenting territory. Just you wait. Mistakenly believing that strong morals and all that good stuff aimed at raising your child will prevent her from making her mistakes is the mistake many people make. In fact, many of us who have raised children to adults know better than to believe such tripe, as we were there long before you, Dave. If what you say were true, drug addicts and prostitutes and the like would come from only families that were broken and had no communications, strong work ethic or solid morals. Addiction has no cultural, socioeconomic boundaries.

>And I have taken enough steps to ensure that

>.number increases even more. Before you

>know it, I'll be at retirement age, and my

>.pensions will kick in, not to mention my 401K.
>Have you planned for financial hardship?

I can provide food, water, and the basic necessities. Believe it or not, there are many in Florida, more in the rural areas, who rely on no cash at all, and it's always been that way. Self-sustainment has always been a large part of the original Floridians and their families. They have survived Indians, draughts, plagues (such as citrus canker that decimates entire industries and family enterprises) hurricanes on a regular basis..on it goes. Florida has never been the cushy place your ads in between Homer Simpson and reality shows depict. Miami and Disney have always presented an unrealistic portrait of Florida. It is still a very much undeveloped state,,,except on the coastal regions. There are state roads that traverse through the state east and west that have nothing in between the coasts except for a few small unremarkable towns with populations in the double digits.

>What's your excuse not to?

I can always sell my home and move north (or inland) and buy incredible acreage and 4 or 5 times the home I have here and still have enough left over to live fairly well. Our home values increased over 70% in the last ten years in some areas. Taxes when I bought my original home here were less than 300 bucks a year. Now they are over 3G. Houseboats are another option for those of us who tame the sea. Of course, I can always throw a trailer or mobile home near JerryO's place after selling my home and never have to worry about money again.

Source record: 201232

Hi Folks:
Just remeniscing and old realistic CB walkie talkie I had. It had the metal ground-straps on the side and it could talk 2.4 miles (just measured on a map) with an S7. My Wife just picked up two similar walkie-talkies at a yard sale for $5! I was wide-eyed at the size of the thing! I remember when I was a kid wanting one of these walkie-talkies so bad that I got the dimensions and made a cardboard model to see 'how it felt holding one'! Wow! Thinking back! Anyone ever routinely talk further on a CB walkie talkie?
The guy I use to talk to frequently in South Toms River was Electro-Express. I - you guessed it - was Hydro! (hydrofoil) He'd say, "The only walkie-talkie I know that'll talk that far is Hydro's". I currently use a Johnson Messenger Viking. Yes, I know it's 2005.. ;-) This radio talks and sounds nice too!

Take Care!
Hydro

Lessening of consumers' purchasing power causes a reduction of demand,
and therefore the prices will drop further, which then leads to
deflation, which was a very real fear a few years back. Which is one
reason why the fed chopped interest rates so much.

>So

>Gee, I guess that explains why there is such a variation in gas prices
>in every town -- even within the same neighborhoods.

I see very few large variations in price in my area. In fact the stations near me have some of the lowest prices in the state. They follow the wholesale prices so closely that I've seen the prices change 3 times in one day already. When one of the local stations changes the price, the rest will follow suit in a day for two. If I didn't know better, I'd swear there was large scale collusion.

>>>Just because the curves intersect at one point doesn't mean the price

>
>
>Wrong again, Dave. The recommended fuel for the Model T was alcohol,

No Frank, the Model "T" had the capability to run on alcohol "as an alternative" to gasoline. Henry Ford felt that allowing the car to run on alcohol would sit well with local farmers who produced it. It was a "bell and whistle" not a mandatory requirement.

>and that's what automobiles were built to use back in the early years
>of their history. And it was great because there were a whole bunch of

>move which shut down the stills and convinced auto manufacturers to
>build their engines to run only on gasoline.

Titusville Pa. (Not all that far from me) is a foreign oil company?
We were producing "cheap" oil since 1859.

We didn't start importing oil on a large scale until 1970.

Try entering "US first imported oil" into google and see what you
find.

You really should stop with the conspiracy theories Frank.....

> Afterwards they pushed
>the gas prices up, and the oil companies not only recovered their
>losses but established a dominance of the market.

They already had a dominance of the fuel market. The cost of gasoline
was under 30 cents a gallon up until the early 70's (I used to fill
the tank on my go-kart for a dime). The prices only started rising
when we increased our dependance (and by doing so, relinquished
control of the pricing) on foreign oil. OPEC is nothing more than an
organized collusion to artificially set the price independent of
normal market forces.

Could it be..... a Monopoly?

> -That's- why our
>cars burn gasoline, and -that's- why we are paying so much at the
>pump.

No, we use oil because oil was (and is still) cheaper to produce than
any current alternative fuel. The current high price of gasoline is
starting to entice alternative fuel producers as the gap is closing.
Perhaps those high prices are what we need to finally break free from
"Big oil's" grip. I only hope the high cost of oil doesn't break the
back of the economy first.

>
>If, back in the early 1900's, the alcohol producers were able to stay
>in business (in a fair and competitive market, protected by import

>developed. We now know that fuel-grade ethanol can be produced cheaply
>on a large scale using specially developed yeasts & enzymes and vacuum
>distillation, but there are no 'refineries' large enough to make it
>profitably.

You also discount the potential environmental impact that large scale
raw material farms, as well as the effect of production emissions and
byproducts of the process might have on pollution.

Alcohol production has improved in efficiency in the last 20 years,
but it's still more expensive than gasoline. Most of the demand for
alcohol now, is to use as a "blend" for oxygenate requirements in
gasoline as part of the clean air act, especially now that MTBE has
been banned.

>Also, alcohol comes from vegetable bio-mass, meaning the
>energy in alcohol comes from the sun which is both renewable and
>virtually inexhaustible.

True, and also true for methane and hydrogen But none are competitive
with oil on a cost basis.

> Now the US is one of the most agricultrually

At the expense of feeding the population?

> All this
>could have happened within the past eighty years had it not been for
>unfair import trade practices in the early 1900's.

We didn't "import" oil until 1970.

> But it didn't, and
>now -we- have to pay for the mistakes made by the government all those
>years ago.

Shame Bush didn't have a grandfather who was president back then, who
you could saddle with the blame.......

Hindsight is always 20/20. We didn't know about such things as global
warming, ozone depletion, the finite availability of fossil fuel, and
the need for truly renewable fuel sources back in the early 1900's.
Oil was cheap, easy to extract, and plentiful. It was a no-brainer
back then.

>Now are you so nearsighted that you can't see what's going to happen
>to our progeny in the future just because you want to save a couple
>bucks by buying a cheap Chinese toilet-paper dispenser?

I don't have a choice, because in most cases, there are no other
toilet paper dispensers available. I could pay more for the same
Chinese product at another store but eventually the profits end up in
the same place.

I'm not nearsighted. No, in fact, I am a realist. Like you once told
me, change is inevitable. We can't go back to what we once were, so
our best chance is to adapt to what we will become.

> Or do you
>-like- the idea that -we- are actually helping China become the next
>globally-dominant economic superpower?

If that happens, and it seems likely, they will suffer under the same
economic pressures that affected us. And we'll have had a 100 year
head start on them on learning how to deal with it. Since the US is
the largest consumer nation on the planet, it won't do China much good
to make cheap widgets if no one here can buy them. If their own people

finally achieve some sort of social and economic freedom, and become
significant consumers, there will be a period of rapid inflation in
China, and it will no longer be so "cheap" to make things there.

>Those who don't learn from history are doomed to repeat it. I learned
>my history, Dave. You need to go back to school.

What history did you learn Frank? What historical precedent can you
cite to apply to the current economic and energy situation that we now
face? Considering that we have never had such a level of global
economics, there is little that could be accurately compared from any
time in history to now. And you're back to making silly comparisons
like Bush and Hitler.

>
>
>You didn't need to -- you demonstrated it with your lack of
>understanding on the subject.

Considering that most of your examples are both myopic and single
dimensional, your level of understanding is on par with the
theoretical models that they teach you in school. You know how things
are supposed to work under controlled conditions. But you can't quite
grasp the effects of variables which can be both difficult to predict,
or accurately quantify.

>>Oil is both elastic and inelastic depending on circumstances. When
>>there is a refinery fire, or a terrorist cell takes out an oil field,
>>or there's a labor strike in Venezuela, and the cost of gasoline goes

>>up, that is a result of a lowering of the supply relative to demand -
>>an elastic trait.
>>
>>On the other hand, when the demand and the supply remain fairly
>>steady, and the price of oil jumps up because some clown at Goldman
>>Sachs predicts that oil could hit $100 a barrel, that's an increase
>>fueled (no pun intended) solely by investor speculation (And creating
>>a self fulfilling prophecy as a result), which is an inelastic trait.
>
>
>Wrong again. Oil is inelastic because the -demand- remains constant
>-regardless- of the price.

Demand is never constant. Demand changes with the season, economic and social conditions around the world, and emerging technology in developing nations. Overall, demand has been steadily increasing for the last several years.

> If you can't even grasp a simple concept
>like price elasticity then you really shouldn't be talking economics.

Maybe that's your problem. You keep talking about simple concepts, whether it be economics or electronics, while the world is hardly the picture of simplicity that you try to paint it as.

I am talking about complex dynamics which are light years ahead of your "simple concepts". For all the schooling you claimed to have had, you didn't even know that we didn't start importing oil until 1970. And there you are ready to create another (evil) corporate conspiracy theory for which to lay the blame for our current dependance on oil. Did they teach conspiracies in your economics class? Did your instructor (I hesitate to use the term "professor") wear Berkinstocks and tie his hair in a ponytail?

>But I keep forgetting -- you have some intrinsic need to publically
>humiliate yourself by demonstrating your ignorance.

At least I knew when we started importing oil.

>>>
>>>Import tariffs interfere with a free -international- market,
>>
>>Hello McFly! We now live in an international GLOBAL market. Get used
>>to it!
>
>
>Nations have been trading with each other for thousands of years,
>Dave. International economics isn't a new concept.

No, but multinational corporations are.

> The fact is that
>there is, and has always been, both an 'international' economy and a

>'domestic' economy

And the line between the two has blurred considerably since you were
in "school".

> (from the perspective of the US border that would
>be Macro- and Micro-economics, respectively). For the past century the
>international economy has been carried by the US at the expense of the
>domestic economy.

I'm sure there will be those in the EU who would disagree.

> But now our domestic economy simply can't carry the
>financial burden of the planet much longer. It's time to quit handing
>out international welfare checks, focus on -our- economy, and let the
>other countries either sink or swim on their own merits.

And you call me ignorant? Do you know what the word "Symbiosis" means?
Look it up and apply it to the global economy. There is no completely
dominant autonomous entity. If any of the parts is wounded, the rest
also suffers.

>>>and
>>>that's the intent: when the international market starts to hurt the
>>>domestic market, you establish import tariffs. It's been done for
>>>hundreds of years and it works pretty darn well. And in case you
>>>didn't notice, Toyota has offered to raise the price of their cars so
>>>GM can stay competitive (and in business) in the domestic market. The
>>>reason given was that low import prices hurt the American economy (the
>>>recent GM layoffs) and is therefore bad for US/Japanese relations.
>>>Looks like Japanese industry is looking out for American interests
>>>better than our own government.
>>
>>No, the Japanese are looking to improve their profits. If they
>>"voluntarily" raise their prices, then the increased profit goes
>>directly to Toyota. If they wait until the US government places a
>>tariff, then difference will go to the US government.
>>
>>There is nothing altruistic about Toyota's motives, trust me.
>
>
>Except that they made the announcement with an explanation that opened
>the door for the US government to establish import tariffs -without-
>Japanese retaliation. That takes balls. But of course their motives
>are not altruistic because if GM moves it's plants to a country with
>cheaper labor then it threatens to become more competitive, something
>Toyota doesn't want. They also understand that the auto industry is
>big business in the US, so if the industry goes under then our economy
>suffers, and consequently so do the sales of -their- products in the
>US. -They- know it's financially responsible to keep a trade balance.
>But for some reason the Bush administration would rather let Japanese
>car makers control the US economy instead of doing it themselves.

Another example of where the line between domestic or international
markets blur: Is a Toyota, based in Japan, but made in the US, with
some parts which are produced in China and Taiwan, a foreign product?
Or is a Ford car, based in Detroit, made in Canada or Mexico, with
parts from various countries, a foreign made product?

>>>I'll make this as simple as I can: If a country outsources almost all
>>>it's industry (like the US has done in the past 25 years) then you no
>>>longer have an industry-based economy. With the loss of industry we
>>>have been reverting to a service-based economy. Now the -service- jobs
>>>are being outsourced as well. So what's the next rung down on the
>>>ladder, Dave?
>>
>>Intellectual property, information, management, and entertainment
>>content providers.
>>
>>
>>> Salvage -- a nation with an economy that's based on
>>>scrounging through our garbage piles for resale to, ironically, the
>>>now industrialized nations that only a few decades ago were called
>>>'third-world countries'. And that change is already happening. The US
>>>is literally exporting it's garbage to foreign countries to be
>>>recycled into the raw materials for -their- industries.
>>
>>Frank, there are no shortage of demand for doctors, lawyers,
>>plumbers, carpenters, auto repair technicians, shippers, consumer
>>goods, and yes, even bartenders.
>
>
>Gee, I seem to recall saying -something- about how we have turned into
>a service-based economy.....hmmm, now where did I say that....?

And you also said that those services were being outsourced. The
examples that I provided are not likely to be outsourced as they
depend on the point of service.

>>>But you think I should go back to school. I don't know why since I
>>>earned a 3.9 in both Micro- and Macro-Economics.

Hold that thought, and remember it for later.

>>>>>Speaking of policy, when do you suppose Bush is going to make good on

>politics but blames the Democrats because he can't.

To quote an analogy from Star Trek: "He's the president, not a miracle
worker".

>That's like a car
>mechanic saying that he can fix an engine, but then complains that he
>can't fix it because it's broke.

No, more like he can't fix it because the parts that are broken are
out of stock and the manufacturer is on strike.

> What an idiot! (And BTW, that was an
>analogy, not a metaphor.)

I'll be sure to pass that on to Twisty, since he's the one who has a
problem differentiating.

>>>One fact is that too much free international trade hurts the domestic
>>>economy. Another fact is that the US isn't subject to the laws of the
>>>WTO or NAFTA.
>>
>>True. But are you willing to bet on our survival in the global market
>>against the combined interests of the rest of the industrialized
>>world?
>
>
>Where, in any of my ramblings, did I ever suggest that the US should
>economically isolate itself from the rest of the planet? I didn't. You
>have to strike a balance between international and domestic economics,
>which right now is horribly unbalanced. One strong indicator that
>would show if things are improving would be a reduction (or complete
>neutralization) of the trade deficit. But that isn't happening -- on

>the contrary, the trade deficit just keeps getting bigger. That's bad
>economics, Dave.

Well sure, we can't compete with the cheap labor of 3rd world
countries. But rather than go completely out of business, American
corporations now outsource manufacturing. But the profits that these
companies make still come back to the U.S. in one form or another.

>>>We can pull out just like Bush pulled out of the Kyoto
>>>accord. And another fact is that if the US pulls out of the WTO or
>>>NAFTA then there will -still- be international trade for the simple
>>>reason that the US has money and foreign companies want it.
>>
>>Are you so sure about that?
>
>
>Yep.

I'm not. You far overestimate the U.S. importance in the world.

>> What do we make that they can't? (and
>>cheaper).
>
>
>Not 'cheaper', Dave -- just economically competitive.

No, THEY make it cheaper. We can't compete with them based on overhead
alone.

>
>> And what happens when we can no longer import oil? Are you
>>willing to drag this country down to the brink of economic depression
>>in order to restart it as it was 50 years ago?
>
>
>Say what? 50 years ago the US was at the height of an economic boom.

That's what I meant. You can't turn the clock back 50 years to a point
where we were at the top of the game, because the other players have
done their homework.

>>> And yet
>>>-another- fact is that you have an extremely limited understanding of
>>>economics.
>>
>>No, I see the global picture. You're still living with a 1950's view
>>of the world and the dynamics of the global marketplace.
>
>
>Money is money, people are people, and economics has been a functional
>part of civilization for as long as there have been both people and
>money. If you think that you have any better view on economics than
>what has been learned in the past few thousand years then by all means

>run for president.

It's not that simple. Money is money, but there's no allegiance to
American money. If, like you alleged before, China becomes a major
player and their population is allowed to become viable consumers,
they far eclipse the U.S. as a consumer market. My company already
does business with China, and we've already sold them a large amount
of product, and it's only a small pimple on the total population
there.

>And once again you missed the point: If I was being hired by the
>public then I might care if people know I have a better education than
>'the other guy'. But I'm not running for office. The only person that

>
>
>>>Fourth, many academic institutions have reputations (not 'pedigrees')
>>>that speak to the benefit of the graduate. A graduate from Cal-Tech
>>>has a much better chance at getting hired than someone who passed a
>>>correspondence course advertised in a magazine.
>>
>>Yes, and another case of perception. Someone from Harvard, or MIT,
>>would be assumed to have been better educated than someone from a
>>state college. Even though this perception does not address how the
>>individual did at those respective schools. Some could call this
>>"perception prejudice"......
>
>
>You're a kick, Dave -- you just shot down your own argument!!!

Not at all. I never denied that perception exists in certain areas.
My argument is that the perception that you got a better education
than someone who only had 2 years is not readily apparent, and
therefore there is no expectation of such, until YOU bring it up.

>>>So what's the name of that tech school you claim to have attended,
>>>Dave?
>>
>>N.O.Y.F. Business University.
>
>
>Why not just admit the fact that you never attended -any- tech school
>or college?

That would be a lie.

> You're about the same age as me, but you still haven't
>learned that honesty is more credible than self-aggrandizing lies?

I'm not being dishonest. The fact that you THINK so, is only
speculation on your part.

>That's why I have credibility and you don't

If you say so. There is little other evidence, except for your newly found friend Twisty, who would vouch for that. I wouldn't exactly call that a ringing endorsement.

> -- I freely admit that I
>graduated from a state university and not Cal-Tech; that I work as a
>bartender and no longer as an EE at a radio station (and even that I
>was unemployed for a while); that I don't make gobs of money or have

>
>Yet you, Dave the Braggart, whose name and address are public
>information that's readily accessible on the internet, can't even
>admit where you went to tech school. Ok, Dave, whatever you say.

My name and address are public by virtue of my ham call. I didn't voluntarily offer it.

Braggart? Now that's a hoot Frank. You call ME a braggart, when I reveal very little at all of my personal life. You, on the other hand, are quick to remind people of how you got a 3.9 in economics, the many times you've told us where you went to school, how you "taught" logic courses, absorbed a college level course in psychology from simply helping a "friend", shadowed Olllie North in the military, and other examples that have escaped me at the moment. It's very obvious that you place a great deal of intrinsic value on your schooling, no doubt a reflection of the difficulty you went through to get where you did. But it's not the be all and end all Frank. A degree is only the key to the door. They're a dime a dozen around here. It's what you do afterward that really counts. So what are you using your degree for today Frank?

So if anyone's bragging here Frank, it's you!

You make a big deal about credentials, as some sort of trump card (my degree can beat up your degree). They are meaningless here. Ideological debates transcend rote schooling, and go beyond what can be taught in a classroom.

I haven't been in a classroom in over 20 years. I've forgotten much of what I learned there that doesn't apply to my current area of work, and the subjects that interest me on a personal level. Much of the current technology that I work on today, wasn't even around back then. What I know now I know from the ability to do the research myself. Your degree is obsolete Frank, unless you continually refine and augment it. But you're pouring drinks.

>>>The contracts are both long-term and binding on Iraq, regardless of
>>>what name they call the company or who runs it. You are clearly out of
>>>the loop on this issue, Dave.

>>

> Hydro
>

Hello, Hydro

Careful, or you'll be giving away your age :))

Yep, as a kid, I had used some of the very low power stuff a bit. In college, in 1966, I hadn't taken my ham gear down and my roomate and I decided to see how far a cb walkie could go.

We had only gotten about a mile down the road when the local cops pulled us over and told us to get off the radio. It turned out that their had been a fight at a bar just outside of town the previous night between to rival gangs, one of which threatened to come back the next day. The cops were really clamping down on everything.

Never did find out how far the things could reach :(

Best regards from Rochester, NY
Jim - old as air and twice as polluted :))

>
>In Detroit for GM workers? Who pays for that?

We do. But in this case, it's money well spent. I tend to think of it
as an investment. An investment in humanity. Teaching a person a new
skill is far better than just paying welfare.

What did these people do 50 years ago, when health insurance was still
in its infancy and few people had it?

> What is your solution to this very large group?
>There is an entire contingency in many demographical areas of the US in
>which many are trapped in a sort of financial snare.

Subsidizing health care costs is what put us in this mess to begin
with. Private insurance subsidies have enabled the healthcare field to
sharply increase costs. If the government got involved, it would only
get worse. Unless, there were mandatory caps put on the costs

>>Well, if you live in a town where 80% of the
>>people work at "the factory" and that factory
>>closes up, well yea the town's in a real pickle.
>
>
>All towns have a major employer.

That's wrong. Had you said "many" or a "good deal", I would have to
reluctantly agree with you. But the area where I live has no "one"
major employer. There is a collection of many smaller professional and
technology businesses. The same is true in many areas of California,
and Texas.

Years ago, when the textile mills ran, the steel mills flourished, and
other large factories dotted the landscape, there might have been a
bigger impact. But most of those factories have been closed now for
over 20 years, and have been replaced by smaller, denser high tech
industries.

>>That's why an intelligent person looks to live in
>>an area where alternate employment id
>>plentiful, and diverse commerce is well
>>established.
>
>

>You are focusing on a select group of healthy individuals.

Which makes up the greatest majority of the workforce. That is what I
was talking about initially.

>The number of
>those without health care (seniors included) far outnumber those healthy
>workers who get laid off.

Most companies who employ skilled workers, have some form of
healthcare coverage as part of their benefits package. I've never had
a job without it. Resumption of healthcare coverage is tied to the
laid-off worker's need to find another job.

>>That way, no one layoff can cripple a
>>significant portion of the population.
>
>
>Depends what you consider a significant portion of the population. I can
>think of several examples..Reagan importing cheaper metals from the
>Asians decimated the steel industry in Pa and Ohio.

I live within an easy drive of 4 different steel plants. The towns
that surrounded them were dependant on those mills for the majority of
their income. But 20 years later and things have pretty much
recovered. People can get pretty creative when they need to be.

> In many of those
>industry towns, this led to the closing of the mills and a significant
>layoff of those town's populations and many of those towns became
>ghettos or ghost towns because of that.

Not in my area. The towns (Allentown, Phoenixville, Fairless Hills,
and Conshohocken) are still going strong, although the people who live
there are forced to commute to work now. The towns are going through a
revitalization, where the old factories have been leveled and in their
place have sprung up huge business campuses.

>Same can be said with coal
>mining and to a certain extent, the auto industry. History repeats
>itself.

Yes, as we continue to become more efficient at manufacture, the
nature of jobs have evolved along with it. The automobile pretty much
ended the demand for blacksmiths. But we shouldn't blame the
automobile for causing the demise of the blacksmith industry. The
smart blacksmith went back to school and learned to repair cars.

>>That's one of the reasons why I still live where
>>I do. I was once contemplating a move to both
>>Florida and North Carolina. But the lack of
>>.diverse skilled jobs and much lower pay
>>scales pretty much nixed that move.

>Lack of diverse skilled jobs?

Excuse me, I should have said diverse high paying skilled jobs.

> When was the last time you checked the
>stats? Florida has led the country in adding new jobs and has not felt
>the inflation the country has felt the last so many years. The pay here
>was always offset by the lower cost of living.

That's a myth. Yes, there are certain costs which are lower in Florida. The homestead exemption saves a bundle on property tax. Homes are (were) cheaper. There is no state tax, and utilities are somewhat lower. Yes, many costs ARE lower to an extent. But if you try to buy something like a car, gasoline, or a major appliance or consumer good, the cost is pretty mush the same as it is in any other state. And at 30-40% less of a salary, for the same job, that limits one's buying power.

>The only people that have
>trouble adjusting are those who live beyond their means.

Living beyond one's means is somewhat subjective. It depends on where you are living and what your earning power is.

>_
>ï¿½People like you
>usually get what is coming in the end
>>Yes, we tend to survive, because we don't
>>look to other people to blame, or to the
>>government for help.

>What about this job retraining you speak of? Who pays for it?

We do. That's one area of assistance that I'm very much in favor of. Training enables people to become self-sufficient.

>>That's what self sufficiency and personal
>>responsibility are all about.
>
>
>Looking to the government for assistance is perfectly acceptable in many
>instances, Dave. There are thousands and thousands and thousands of
>people STILL homeless in Fl because of the hurricanes.

Yes, Yes, and YES. I'm totally cool with hardship TEMPORARY assistance.

>Many of the major
>insurance companies are STILL unable to pay for their customer's claims.

And my insurance premiums have increased as a result. Yet the company swears that it has nothing to do with the large payouts they had to make to cover those claims. Somehow I don't believe them.....

>If it wasn't for the government assistance (what you always refer to as
>"handouts") with food, water, shelter, etc., these folks would be on the
>welfare tit.

What's the difference? A handout is a handout, unless you are expected to pay it back. Government assistance or welfare? Comes from the same place. But again, I have no problem if it's temporary only.

> Now please 'splain how being self-sufficient and personally
>responsible can help these folks who paid their premiums on time

>faithfully all those years, had their homes destroyed or damaged to the
>point they are rendered unsafe for living conditions, lost all their
>possessions, yet still manage to survive by living in tents, can bring
>them up out of their hell created by the insurance companies who are
>regulated by the federal government.

The insurance companies are obligated to make good on their claims.
And they should be made to repay the government for any "handouts" it
had to pay to house people until the insurance companies settled. Call
it an "incentive" clause.

>You really have no clue the
>magnitude of damage these storms had on many people in Florida.

I saw some of it when I was there last fall.

> There
>are so many hardworking people that are struggling just to feed their
>kids, living in tents, and waiting for the federal government to crack
>down on the insurance companies and make them ante up.

Which they should.

> To suggest these
>fine families are anything less than responsible or self-sufficient
>shows you haven't a clue, Dave.

I never said anything of the sort. I'm not talking about temporarily
displaced people. I'm talking about perpetual slackers.

> On the contrary, I will lay odds these
>folks are illustrating survival skills and grit that you couldn't
>handle.

Based on what?

>Many of these folks have been living out of doors, literally,

Nothing. If she wants to marry a black guy, I'm cool with it. As long
as they love each other.

>You can tell you are about to tread in unfamiliar parenting territory.

>were broken and had no communications, strong work ethic or solid
>morals. Addiction has no cultural, socioeconomic boundaries.

Yes it does to a certain degree. Kids rebel and turn to things like
drugs because they need an outlet for their energy, or they are
craving attention. Provide them with many sorts of creative avenues to
release, and there will be no need to turn to destructive behavior. A
kid who plays sports, acts in drama clubs, plays in the band,
participates in the arts, or has a worthwhile hobby, will be way too
busy to hang out with the slackers. Giving a kid an activity that
they can be proud to excel at and bolster their self esteem (While
learning what it means to truly EARN it) builds character. Lastly,
never lose communication with them. Set your ground rules while they
are young, and they become adjusted to them. Let a child run amuck
when they are young, and then try to reign them in when they hit the
teenaged years, and you've already lost. Talk to them always. Know all
their friends (and their parents). Make sure they know that you're
always there for them. Support them in whatever they do. Show up at
their plays, cheer them on at their games. Listen to their teachers
when you have conferences. Trust them enough and allow them to make
small mistakes, but keep on the lookout for major ones. In short,
STAY INVOLVED!

I know how my parents raised me. I know from a child's perspective
which disciplines worked, and which ones didn't. I use what I learned
to my advantage as a parent.

Talk about self sufficiency! In this area, that just isn't very
practical. Unless, of course, you're Amish.

>Self-sustainment has always been
>a large part of the original Floridians and their families.

Like that guy in the swamps of Tampa that was just forced, by eminent
domain, off his land to the tune of 5 mil?

> They have
>survived Indians, draughts, plagues (such as citrus canker that

Sounds like the Pine Barrens in New Jersey......

>>What's your excuse not to?

>I can always sell my home and move north (or inland) and buy incredible
>acreage and 4 or 5 times the home I have here and still have enough left
>over to live fairly well.

I could do the same. For the price that my home can get in today's
market, I could move to an unremarkable (READ: not in demand) area and
by a similar place for a fraction of the cost. But there's no place

to work at a livable wage. But when I retire, that's probably what I will do.

>Our home values increased over 70% in the last
>ten years in some areas.

My home appreciated about 70% in the 5 years that I've lived here. It's unreal, and it won't last. I pity the people who are buying into the market now with a 10% down payment and will likely find themselves upside down when the bottom finally falls out of the market.

> Taxes when I bought my original home here were
>less than 300 bucks a year.

I'd die for that rate. Right now, I'm approaching $5500

>Now they are over 3G.

Even 3G would be better than what I'm paying now.

>>Houseboats are another option for those of us who tame the sea.

I once toyed with the idea of living on a boat. But I have far too much junk to make it practical. Especially with family considerations. If I was a loner, I could live in boat or a trailer and I'd be just fine.

>Of course, I can always throw a
>trailer or mobile home near JerryO's place after selling my home and
>never have to worry about money again.

At least you'd have a drinking buddy ;-)

You wouldn't know it from the sheer number of Florida hams who I can
work like shooting fish in a barrel when 6 meters opens up. It almost
seems like most of the 6 meter operators are in Florida.

I was sad when the CB Coffee Breaks (or Jamborees) pretty much died.
I'll feel the same way when hamfests die as well. It's a part of a
culture that was fun while it was here, and will be sorely missed.
Just like those drive-in's in the 60's where they brought your tray of
food out to you and hung it on the car window....

Higher power walkie-talkies back in the 70's routinely could talk 5
miles or so. I had a 1 watt Midland with a 5 foot telescopic antenna
that I could get 4 or 5 miles out of. Alot of it depends on terrain.
If you are on a high hill, you can talk a lot further than if you're
in a valley. Also close proximity to water, as you have, and flat land
will allow your signal to travel farther.

Don't apologize for the vintage gear. Radio was more fun when that
stuff was the state of the art.....

To prevent 60/120 cycle noise from entering the radio on receive.
Older tube radios routes the cathode of a one or more tubes through
the mic connector to control transmit.

> 2-what is this suppose to do

see above

> 3- if the caps are not used what will be the outcome

chances are that there maybe some ac hum in the receive or transmit.

More likely to help in AC (60/120 cycle) ground loops causing hum in
receive or transmit low level audio sections.

You are right to keep RF out one would use say 0.01 micrfarad caps.
Even 100 pF caps for stubborn higher frequency harmonics.

Hello Harry Hydro:

Great story there.

I use to have a pair of Lloyds 100 walkie takies, with a massive 100 mw (.1 watts or 100 Milli watts) of power from a 9 volt transistor radio battery.

I use to live in Lake View Terrace, near the San Ferenando Valley. Behind out house was some hills with about a 1000 foot above the valley floor. Well with the Lloyds 100 walkie talkies us kids climbed the hills and where able to talk all over the place on a Saturday. We where able to talk to boats and people on a picnic near Hanson Dam and Lake. Yeah we was somebody all right, being able to talk all that way.

Then we hit the big times when dear ol Dad traded his Bowling Ball for a Gonset G12 CB Radio with a massive 5 watts of input power, and a 102 inch whip antenna on the roof, gee whiz we talked all over the place. We even talked to the Sunland Tujunga area, almost 3 miles away I think.

The power supply was Dads truck 12 volt battery out of his 1964 Custom Cab Ford F100 Truck, with red bucket seats, simply custom back in 1966. The battery eat up the carpet too much after leaving the charger on all night long, but I don't think Dad knew about the carpet, or didn't yell at us for it.

Dad was able to talk to Rebel in down town San Fernando, on channel 5, who talked skip all the time, to back east. This must have been 1966 or 67.

Dads friends Ray (Buckshot)and Jim (Jimmey Cat) use to go deer hunting in the hills and mountains behide us at times and they could even talk ship on the top of the mountains with there 5 watt walkie talkies. Many of he locals would go nutzoid when they could hear Jimmy Cat say to Buckshot "No Ray that one is too small wait for the bigger one comes around the hill, ect....." They wouldn't respond to any of the local stations, as they where deer hunting, or so goes the story. But thats another story.....

No one has figured out the "inflation game." You can never quit
working... soon as you do, you start losing...

The game is to promise security, then when those you have promised
security to can no longer work (retire), you take the money from them
and give it to the new ones...

... used to be called, "The carrot in front of the horse." Amazing how
few catch on till it is too late...

Warmest regards,
John

Gee, I never saw a copy of that bill. Is it online somewhere?

<snip>
>It's a fact that the democratically controlled congress raised taxes.
>Bush Sr. was coerced into signing it, under threat on not having any
>of his bills passed through.

Coerced? LOL! Contrary to your warped spin, the president pretty much controls the budget -regardless- of who has a majority in Congress unless that majority can override a presidential veto, which hasn't happened in decades. The historical trends of the budget follow the leadership in the White House, not the Congress. Your insinuation that Congress has more control over the budget than the president is nothing but a slick way for Republicans to take credit for Democrat achievements and blame the Democrats for Republican failures.

<snip>
>> Daddy Bush lost re-election because he got stuck

What? You mean that after all the time you spend on the internet looking for the "facts" you don't know where or how to find Federal budget information? Do I have to do -everything- for you? Well, I won't. You look it up for yourself since you are so adept at finding out the "truth". And when you do, post the link -- the info there is more damaging to your position than what little I pulled from it. But I -will- give you a hint: the URL for the homepage ends with ".gov".

>> Do you still think the Republicans are
>>cutting the budget like they claim? Or are you going to wallow in your

>
>Right now no. There's a war to fight and that typically costs a lot of
>money. But they are cutting funding to other programs.

During the Vietnam years the Federal debt increased by only $42.2B and the deficit never exceeded $27.7B. In fact, at the height of the war in 1969 it hit a low of $0.5B that wasn't bettered until Clinton pulled a surplus out of his cigar box. That's data from the same

source as before. Find it. In fact, I -dare- you to find it!

Hello Hydro.

Walkie talkies used to be fun!

Same here, we used to have a yuck it up ball at those, back in the day.

Greenspan chopped the prime rate after Bush's tax "rebates" because
the expected revenue wasn't coming back -- instead of spending that
money people were paying down their credit cards. So the Fed dropped
the prime rate to encourage people to borrow and spend -more- money.
IOW, the Fed was bailing out the economy after Bush fucked it up.

Wrong, Dave. The preferred fuel for the Model T was ethanol, and any
Model T fanatic or Ford historian will tell you the same thing. In
fact, Henry Ford called alcohol "the fuel of the future. There are
more stills in this country than filling stations."

>>and that's what automobiles were built to use back in the early years
>>of their history. And it was great because there were a whole bunch of
>>backyard stills that were pumping out gallon after gallon of good ol'

>
>Titusville Pa. (Not all that far from me) is a foreign oil company?
>We were producing "cheap" oil since 1859.

Except that it wasn't refined for gasoline until much later. Otto
invented the IC engine to run on alcohol, not oil or gas.

>We didn't start importing oil on a large scale until 1970.

The world's first oil tanker was built in 1877. Henry Ford continued
to push for alcohol fuel until the 40's, even though big-time oil was
discovered in the middle east a decade earlier. The rest is history
(that you never learned).

>Try entering "US first imported oil" into google and see what you

>>profitably.
>
>You also discount the potential environmental impact that large scale
>raw material farms, as well as the effect of production emissions and
>byproducts of the process might have on pollution.

The environmental impact of farming? That's a -real- stretch, Dave.
FYI, gasoline was originally just a worthless byproduct of refining
kerosene from crude oil. Regardless, part of the 'byproducts' left
over from the fermentation process of alcohol are left in the vats to
ferment the next batch of mash, while the rest is almost a perfect
fertilizer (and sometimes used as hog chow). Ethanol burns cooler so
there are no NO emissions (thereby reducing ozone pollution), there
are almost no hydrocarbon emissions, no need for lead or other
additives, no cyclic carcinogens, and the fuel burns more efficiently
than gasoline. Ethanol is clean at both ends. Get educated, Dave.

<snip>
>Hindsight is always 20/20. We didn't know about such things as global
>warming, ozone depletion, the finite availability of fossil fuel, and
>the need for truly renewable fuel sources back in the early 1900's.
>Oil was cheap, easy to extract, and plentiful. It was a no-brainer
>back then.

Wrong again, Dave. Read up on the Free Alcohol Bill of 1906.

<snip>
>I'm not nearsighted. No, in fact, I am a realist. Like you once told
>me, change is inevitable. We can't go back to what we once were, so

I think I was in the third grade. A pair of Soundesign Ch 14 kids walkie talkies, around 1976 or so. I hit a CB station (I didn't know what CB was at that time), and when I talked to someone, that was essentially it. I abused those radios pretty badly. But they had little to no range. It seemed I talked that one time, and never again hit anyone. But that didn't keep me from trying 1 million times.

Around the 8th grade, I was able to get one of thosetoy base stations, and talk regularly to someone. But had about 1/4 mile range. I did beg my father for a CB, but my parents really didn't support my hobbies at all. I had to wait until I got older before I was able to do the hobbies on my own. My sophmore year in HS, I finally got my first CB, a TRC-422A. Still have it. It seemed that my father finally got sick of me talking about it, and he finally got me one and a power suplly for Christmas. Of course, I was delivering papers until I ccould afford a Turner +3 and a Starduster. Did that for a couple years. Once I graduated HS, that was it until 2 years ago. Then I found you guys. I must admit, I feel like a kid again.

I know what you mean, Vin. I had that old Lafayette tube radio back in
1969, and I had to search to hear anyone, then yell for them 100 times in
hopes of a response. My Mom is a fairly good seamstress so she even made me
a jacket with my CB call on the back of it for the coffee breaks. Thinking
back on it, I was a class A nerd!

Amen.

I picked up a new Grant LT on ebay. They are the same radio as the XL, but for some reason, the XL is geeting $250 for new in box. I emailed Uniden and asked them, and they said it was the same radio, except the LT has backlight and DSC circuit. Some mine was half the cost of the XL. I unlocked the clarifier and will stick it in my car. The receive is great. I have to say, these old school looking meters and chrome are too damn pretty. The backlight looks awesome. My wife left tonight, so I am alone for the next couple hours. Going to do some chatting on the radio !

I am 38 now. The problem is, it took forever to get to 21 years old. It only too
2 weeks to get from 21 to 38 years old.

I talked some skip last Saturday. I answered someone, then they turned
their clarifier. I lost them in the racket because their frequency changed.

I "found" them a few minutes later when I tuned for someone else.

That's one very good reason to have a locked clarifier.

Got the radio finally. I talked to Jesse Stanley last Saturday. A rep from Premiere emailed me on Sunday saying it had shipped and a tracking number would be emailed to me on Monday. No reply on Monday, I emailed them Tuesday and they said they would reply with a tracking number. 3 hours later UPS notified me that the package had shipped that day. It arrived today (Friday) and seems to be working fine. I had forgotten what a wasteland the Citizens Band is (and has been for many years). It's good to be back.

A 2x455 amp will work great. They are called 225's now, because that's
how watts of DC input they use. It's a marketing ploy. Each MRF455 is
good for 60 watts max times a push/pull pair is 120 watts max RMS.
Expect OK audio on AM at 30 to 35 watts of dead key with a properly
biased box. Stay away from Class C (competition box or modulator) units.

Wrong. 9 ft in coax is electrically longer than 9 feet in air. You have to consider velocity of propogation in a given type cable before deciding the proper physical length.

Hell, 220 is a US only band, so equipment is expensive. Not a
lot of market for it. It's pretty private, though. 440 has lots
of repeaters, but it's not as popular as 2 meters is.

I was somewhere between 8 an 10 years old when I got my first pair of CB walkie-talkies for Christmas or my birthday back in the early 70s. This was the results of my parents recognizing a talent for electronics in me back then. By then, I'd put together a myiad of electronic projects like crystal radios, alarms, mosture detectors, dc motors, light detectors, etc. These little CB walkie-talkies were in little plastic blue briefcase-style boxes, less than 1 foot by 1 foot. You'd open them up, extend the telescopic antenna and turn it on. Ony one channel (14) and 100 milliwatts. They'd only work for about a block. I was hooked then.

My father saw my frustration with them after he'd tell me stories of back when he was stationed in Morocco working the other side of the world with a Heathkit DX-40, a Hammurland receiver, and a knife switch to a long-wire antenna.

After he retired from the Air Force, he commuted to school. We set up a 4 watt mobile into a ground plane strapped to the chimney and put an identical mobile rig in his Datsun B210 with a base loaded whip. And then we waited for our CB license to come from the FCC. KCN-6537! Not amazing I still remember that, we used it. We were scared to death of the law back then. Back in the mid-70s, when he took off for school, I'd talk to him until he was out of range. When he came home on Friday's, I'd be at that radio waiting to hear him and talk him in. Range was about 13 miles. It was fun! Back in the 70's, the locals in Louisiana made it difficult because their pleasure was to maliciously interfere with us. Then one day,

he came home and showed me the window had been smashed and his CB was gone. At 12 years old, I became frustrated with CB. At 13 I became a ham. After my father saw me get a ham license, he passed his test soon after I did again, after letting his ham license expire years ago. I started off with an "N" in my call sign. Still have that call sign, but I made "extra" back when you had to pass a 20 WPM morse code test.

When I was waiting for my "N" call sign, I put together a 6L6 oscillator/transmitter and borrowed an old tube-type receiver. My first few contacts in the novice band of 40 were miraculous to me--100s of miles away!. I was hooked at 13. Soon after, I put together a 6146 transmitter for a few more watts. Wow, I was fascinated. Sure was fun back then. Both my mother and father became nervous when they found out about the exposed plate voltage. I mounted that 6146 on top of the aluminum box so I could see the filiment glow and the plate connector was bare metal. My father finally broke down and bought an Yaesu FT-101. Wow! A radio that put out 180 watts AND a VFO AND all bands AND all MODES! I remember making sure it wasn't putting out more than 75 watts--that would have been breaking the rules. It didn't get any better than that. I still have that radio. Needs new tubes (and of course the modification for the available replacement tubes).

I still always travel with channel 19 in the truck. It still works better than a radar detector. Today, I'm frustrated with hams. Back then, my ham friends were techies. It's hard to find a techie on the ham bands now-a-days.

Yup, sure was fun back then. It's a new era today.

That's my story and I'm sticking to it. :)

Guy

So you're going to believe that someone who's clarifier isn't
at 12 o'clock on the 00's is right? I find it annoying to have
to chase someone around because they tune to my on-frequency
radio and they change their transmit frequency.

Have it properly aligned by a tech with calibrated equipment.

Also, the Unidens stay on freq better then the Galaxy and Connex crap.

An old Cobra with the Uniden guts will stay on freq summer and winter,
while a Galaxy will drift a lot from turn on to warmup.

My old TRC-451 (Cobra 146) just keeps on going. Feed that into a
225 box on low using a 636L into a KW-7. Killer SSB combo.

The radio was hacked up when I got it. Now it's back to stock
with the final placed off the regulator for dependability.

How do hams become techies when all they have to do is memorize some answers to a preprinted test? I'm for making it an essay/fill-in-the-blank test. Drop the code. Don't do away with code-only portions of the band.

Code shouldn't be forced on you, but it shouldn't be brushed away.

I find other things in life more annoying. But to me, chasing down people is
like cleaning my contact lenses. I do it so often, I don't even realize I am
doing it.

>Have it properly aligned by a tech with calibrated equipment.

I can do that myself, and I won't hack it.

>Also, the Unidens stay on freq better then the Galaxy and Connex crap.

Agreed.

>An old Cobra with the Uniden guts will stay on freq summer and winter,

I kept all the components I removed for the unlock. Labled and everything.

BTW, my 2510 is not unlocked. I left that alone because I can get so close with
the RIT.

I used the answers in the book method. I learned quite a bit just from that. Now
that I passed the tests, I will get the standard ARRL tech and general books,
before I go on the air.

I think the problem with essay, it time and age. I studied for a month, almost
every night. Having no kids, that wasn't a problem. Get a kid or 2, and you will
have a harder time. Also, it seems the youth are so preoccupied with the Net,
IPODs and cell phones, making the tested harder is not going to get any new
members. Most of the hams I talked to want to get more young people interested
in ham, because it appears to be on it's way out with that age group.

>Code shouldn't be forced on you, but it shouldn't be brushed away.

Code is a complete waste. I studied for a month, passed the test, and already
have forgotten the letters. What they should do if make it optional for code
users. Give a real test, and give out licenses for code users. IOW, those who
want to use it, test for it.

++++++++++++++

Actually the Federal Reserve chopped the Federal Funds Rate during
2000 to 2003 period. This in turned caused banks to lower the prime
rate.

The process of controlling the Fed Rates is to pump in or take out
liquidity in the markets. Lower rates in a recession to stave off
defaltion. Raise rates when teh economy starts to heat up to controll
inflation. The Federal Reserve was very scared in 2000 that the US
would follow Japan. The consumer stimulation in the economy was
purposely done so that Deflation and Fed Rates would not fall below
1%. During Japan's deepest deflation period of 1997 to 2000 their
Central Bank rated never got abor 0.5%. The lower rate was as low
0.01%. The Japan Central Bank at times was literally giveing money
away and few one were taking then up on their offer.

One can debate the merits of teh Fed's move on money policy over the
past five yrs. In doing so you must consider which of the two evils in
worse? Between two and three yrs of deflation or four to five yrs of
stagnation? The Fed took the road of Stagnation considering the
wholesale lack of control on the part of Government to curtail
spending. Funny how the Republicans always criticized the Democrats on
their spending habits! I thought Republicans were supposed to fiscal
responsible? They spend money just as fast if not faster than
democrats.

Tariffs if used on short term basis will have small effects on
inflation. When used as a part of long term policy and become over
bearing then they can become a direct cause and effect to inflation.
Producers can absorb costs spikes that are one time occuring or short
term. If they remain long term then the producer must pass the cost of
tariffs on to the consumer in higher prices. Thus infaltion.

*****

Having worked in consumer electronics manufactoring here in the US and
abroad, I would hardly believe that the material cost for the most
expensive CB radio to exceed $50. Labor another $10 per unit. Most
likely the material cost is between $20 and $40 and labor about $3 to
$4. Manufacturer's markup is more likely 300% to 500%. Considering
that marketing and shipping costs will equal the sum total of direct
material and direct labor costs.

The last consumer electronic product that I worked on had a material
cost of $26 and a US labor cost of $7 per unit. Foreign labor cost in
Mexico only reduced labor to about $5 per unit. We were doing about 1+
million units per year. In high volume, high automated manufacturing,
labor is not your major cost factor. It is overhead and variations.
Overhead in the US has gone ape in the past ten yrs. This includes
electricity, insurance, worker training and other items. Variation is
the changes in cost of piece parts due to volitility in shipping cost
due mainly to variations in oil prices.

Actually in a free market society I often find that the manufacturer
that has deep pockets has distinct advantages over smaller less
affluent manufacturers. They can afford to sell at rediculously low
profit margins to drive competition out or to control who gets into
the market.

****

Demand and shortages influence pricing.

Dumping will cause prices to fall. Companies with deep pockets can
afford to dump product on the market for very low profit margins to
either gain market share or drive competition from the market. Thus in
hopes that they can recover profits in the near future with higher
prices and the resulting higher profit margins.

All too often in global economics discussions is that in the
manufacturering of consumer products one forgets that the consumer is
a fad conscience buyer. Getting to market to late or to early too many
times and you are staring bankruptcy head on. Life cycles of many fad
products may be as little as six months. Often it is two yrs. Even at
this rate so much has to be rolled into R&D to pump out the next
generation of products. R&D is paid for by profits. That is why deep
pocket corporations that can affors low profit margins and still fund
R&D will ultimately drive smaller less affluent companies out of some
of the consumer market.

THe saving grace to competiton is when a product is so low a run rate
that large companies find it not worth their time to get into such a
market. A free market society does not insure smooth steady even
prices. Instead it better marries high production companies with high
running products and low running products with companies that
specialize in small production. 30,000 units per year would be
considered in most circles small production. 5,000 units per yr would
be almost a cottage industry. Large mass production would be in the 1
million per yr run rates and higher.

Also remember this to stay in a market it is necessary that profit be
at least what one could get in a passbook savings account for the
value of all capital assets of the company. IF a company had 1 billion
in assets and a passbook savings account is 2%, then the company
making a product would need to make 20 million or it is better to sell
the assets and go find something else to do.

The "prime rate" is set by Greenspan, not the banks -- it is the rate
at which the Fed loans money -to- the banks. Greenspan started cutting
the prime rate back in 1998 because the financial crises of Asia and
Russia threatened to destabilize the global economy. Ironically, it
was mostly because of those cuts that our trade with China turned from
a 300 billion dollar surplus into a 250 billion dollar deficit in just
a few years.

The price of foreign products goes up as a result of import tariffs,
which encourages increased domestic production and the creation of
more jobs. The higher prices are therefore offset by the resulting
stimulation of the domestic economy. The important thing to note here
is that import tariffs don't stimulate the economy if they are used
for just one or two products -- it needs to be a comprehensive package
that includes across-the-board import tariffs on finished products,
export restrictions on raw materials, tax incentives/penaties against
US coroporations that operate mostly inside/outside the border, etc.

The problem with such a package would be that certain treaties and
trade agreements would need to be repealed. But since most of those
agreements were made at the prompting of politicians that were later
hired by foreign corps (or US shell corps) that directly benefited
from those agreements, dropping those trade agreements shouldn't be a
problem after a little public education campaign.

But hey, it's never going to happen so I'll just go replace a few
hoses in the truck and be quiet.

Why not build a 2 element quad, boom length at max is 6ft, the smallest Radio Shack antenna turner will take care of the antenna for a long time! It will definitely out talk the Antrons. Course you will have a lot of front-back rejection but you will definitely be throwing a signal out into the air!

If I can find my note, I will talk with Armadillo out of No. Central TX and find out what the dB gain is with the quad.

It is very simple to build. As far as that goes build yourself a dipole out of copper tubing or copper wire and it will talk better than most of the vertical omnidirectional antennas that you purchase.

Greenspan is the chairman of the Federal Reserve System and also
serves as head of the FOMC. Grenspan himself does not change the
Federal Funds Rate, but instead it is a vote of the FOMC, Federal Open
Market Committe. The Federal Funds Rate may also be known as the
Discount Rate. The Discount Rate or Federal Funds Rate has three
categories. This is on money that the Federal Reserve System lends to
member depository banks depending on their dredit worthyness. The best
or primary discount rate is an overnight interest rate given to the
best banks. The Seconbdary credit is for a longer period, up to 30
days, given to banks with less than exemplary credit ratings. The
Secondary Credit rate is also higher. Then there is the sessonal rate
which is above the secondary credit rate and below the Prime Rate.

The Prime Rate is the interest rate charged by banks for short-term
loans to their most creditworthy customers whose credit standing is so
high that little risk to the lender is involved.

From that the rest of the interest rates are set.

Yes you are correct that the Fed Funds Rates were cut 50 basis points
in 1998. Again it was with pressure from the Asian and Russian
markets. You also failed to mention that in 1999 and in 2000 the FOMC
raised Funds Rates 50 and 75 basis points respectively. I doubt that
these had much affect on the trade deficit. Instead I would more
attribute them to the fact that major high tech corporations and
automotive corporations were pumping well in excess of 100 billion
dollars in capital investments into China from 1998 to 2003. Add to
that the falling dollar with respect to the Euro and the Cinese Yuan
is pegged to our dollar has not helped the US trade deficit with
China.

Sorry I cannot accept the FOMC rate reductions in 2001 to 2003 as a
reason for the increase in the trade deficit.

I wasn't allowed to use a calculator until I was a sophomore in college. Reason: What if you don't have a calculator later and you need to figure something out? You gotta learn how to interpolate with the tables in the back of the book first! Now calculators are less than $5. Now, when I figure out some simple math problem in my head, nobody gives a crap.

I wasn't allowed to operate two meters with out first knowing morse code. Reason: When voice doesn't work, CW will get through! Now cell phones are free if you sign up for a minimum contract. Now, when I talk about a CW contact I made recently, nobody gives a crap.

I passed my extra test more than 20 years ago. If I took it today, I'd fail it. Why did I have to take it and pass it more than 20 years ago? Why have a test at all today? There is no difference between putting a CB on the air and putting any ham gear on the air today.

Where are today's challenges?

426. Schematic for TRC-231 Walkie Talkie

Newsgroup: rec.radio.cb
Date: 2005-06-12 03:10:04 UTC
From: pdrunen@aol.com
Message-ID: <1118545804.806586.75030@g44g2000cwa.googlegroups.com>
Source record: 201313

Hi All,

Just picked up like new TRC-231 but it has weak modulation. Otherwise looks to be a nice radio.

Radio Shack list the parts for the rig but never post a schematic.

Any one know about how to fix the weak modulation (really weak mod) as I have read that these units run low. I believe that there is a defective part.

How about a schematic?

de KKIOM

Hello Lancer:

Yes the 60's 50's, some old 40's, some 70's.

Today there where crankin Duane Eddy at 10 AM, simply Bitcheeeen music.

Then the Beach Boys, Dick Dale, The Ventures, Pipeline.....

I am waxin up my surf board, two girls for every boy, tell the teacher I am surfin.....

This is a local FM Radio station that most everyone listens to. Its not real strong so I have to have a outside antenna for the clock radio next to by bed to listen to. But its worth it.

There is a couple of local places that have oldie but goodie night. You know drive in restraints and such. The ladies get all dressed up and look great! Some very rare and exciting old cars and trucks show up, even seen a movie star there once and a while. Old kinds of bikes, choppers ect. And of course everyone is playing the local oldie but goodie radio station over their car radio.

Some of the older cars still have the old tube radios with upgraded speakers and they sound great even in mono. The cops even cruse by once and a while.

One guy has a old General Radiotelephone MC 5 in his truck, oh man the memories.

Oh man life is great!

Jay in the Mojave

>Market Committe.

A vote based on the recommendation of the Chairman. And I might be
mistaken about this, but I don't recall the Fed ever voting against
any of Greenspan's recommendations.

> The Federal Funds Rate may also be known as the

I learned it a little different. I'll check my book-learnin' and get
back to you on this.

>Yes you are correct that the Fed Funds Rates were cut 50 basis points
>in 1998. Again it was with pressure from the Asian and Russian
>markets. You also failed to mention that in 1999 and in 2000 the FOMC

>raised Funds Rates 50 and 75 basis points respectively. I doubt that
>these had much affect on the trade deficit.

That's why I didn't bother mentioning them. I also didn't bother
mentioning Greenspan's appointment and quick action after the crash of
1987 (during Reagan's term, just to refresh Dave's memory).

> Instead I would more
>attribute them to the fact that major high tech corporations and
>automotive corporations were pumping well in excess of 100 billion
>dollars in capital investments into China from 1998 to 2003. Add to
>that the falling dollar with respect to the Euro and the Cinese Yuan
>is pegged to our dollar has not helped the US trade deficit with
>China.
>
>Sorry I cannot accept the FOMC rate reductions in 2001 to 2003 as a
>reason for the increase in the trade deficit.

Because too much of the money that's being borrowed at the lower rates
is being funneled out of the country as foreign investment capital,
which explains why it's having almost no effect at stimulating the
economy -- it's not ending up in the hands of American consumers as
was expected. This also explains why the rate has been held so low for
such an unprecedented length of time. But the Fed doesn't establish
foreign policy, and they can't hold the interest rates down forever.
Something has to break pretty soon. Kinda like the hoses in my truck
if I hadn't replaced them today.

I believe that you will be happy with that antenna. The 2 element quad will come in at between 6.8-74 depending on spacing of the driven/reflector. Main thing though you will not have to have a rotor to use this antenna where with a quad you will have to have a rotor. Please let me know how you like it once you get it up in the air. thecowboyace@yahoo.com

What was great about the foundry was, someone always managed to but a bullet in the pile of aluminum chair tubing, that was gonna be melted down. High School humor at its greatest. That was defiantly a tear and snott blowing stunt.

I wake up in my sleep laughing about that!

Why not just do away with the morse code test? WRC-03 did away with the international requirement.

As a matter of fact, can you think of a reason to have *any* testing requirements to operate in the ham bands these days?

You say code is a complete waste. I could say the same about memorizing things like the frequencies of a particular ham band, or answering "yes" to radio waves travelling at the speed of light in a vacuum, or which ionospheric region is closest to earth, or the meaning of the term "73", or the meaning of the Q-Signal "QRS", or how much voltage is there from an automobile battery, or the difference between microfarad and picofarad, or how to figure out a 1/4 wavelength, or ... I just finished looking through the element 2 question pool and I can't think of a reason why people are tested on this stuff anymore.

Can't buy any ham gear today that operates outside the ham bands. Why not just make it illegal to modify store-bought ham gear and then just call it the Citizen's Bands (bandS -- plural).

A few decades ago, you had to have a little bit of knowledge to build/operate home brew equipment, and a little less knowledge to operate store-bought gear and keep it inside the ham bands and prevent unintentional interference. Now-a-days, it's not economically feasible to home-brew your own ham gear anymore. It's cheaper to buy it from a store. And the stuff you buy from the store today almost can't be made to operate outside the ham bands or un-intentionally interfere with others unless you pop the lid and screw it up with silly modifications.

Element 4 has questions like, "What's the audio frequency of the color Black in amateur SSTV?" Who cares? Why would knowing this make you more qualified to download MMSSTV, hook up your computer sound card to your radio (using a store bought interface) and start exchanging pictures?

If CW has been superceded by technology, couldn't you say the same thing about all of amateur radio?

Heck, I just saw an advertisement for a cell phone that accepts broadband TV now.

I don't mean to sound combative to you or anyone else, I just woke up a few days ago and started having some epiphanies on this subject.

Guy

Why not? If you want to drive, you have to take a test, if you want to
get into college you have to take a test, so what's wrong with if you are
going to use code only about taking a test?

****

And not to mention that the FMOC has rasied rates eight times in their
last eight meetings. I guess inflation is not heating up?

No, the trade deficit with China is due to China pegging their
currency to ours. This sets a fixed currency exchange rate that has
existed now for about ten yrs. China can pump goods into the US and
not loose value in currency exchange. The US consumer has borrowed
totheir friggin eyeballs and about 60% of their spending has gone into
buying Chinese goods simply because they are affordable and now have
relatively decent quality.

Yes the borrowing has gone to China in the flow of currency for goods.
You ought to look at some data on the US economy lately and not dwell
on what happened 6 yrs ago. Look at trends of government spending,
consumer debt, employment numbers.

I don't understand the logic in what you're saying.

Are there other tests that we should introduce into society?

Should we implement taking a test before you are deemed qualified to open a credit card account?

Should we implement taking a test before you are deemed qualified to take the mail out of your mailbox and bring it into your house for further sorting, opening, and reading?

Should we implement taking a test before you are deemed qualified to operate a gas pump to fill your car with gasoline?

Should we implement taking a test before you are deemed qualified to reproduce?

Ok, I'm stating some crazy things here to try to make a point...

How about just leaving some space in the ham bands for CW? If it gets used, fine, keep it. If CW dies out (and it will eventually--us old timers who got their ham ticket the hard way will eventually RIP) then reallocate it for other modes.

By the way, I don't remember having to take a test to get into college. I have a BS in Computer Science and a Masters in Computer Information Systems. As long as I paid my bill, they allowed me to go to class.

And the reason for the test to drive a car is to show something in the way of being able to drive a car and not kill someone else while doing it. I can understand the reason for the test to drive a car. I can explain valid reasons for some of my crazy examples above also.

So why test for CW? It's not like anyone who attempts to operate CW without knowing all the letters at an arbitrary speed will endanger anyone or themselves while doing it.

Why have a test to operate any mode in any ham band these days?

Guy

You'd have to ask a morse guy. I don't know.

>As a matter of fact, can you think of a reason to have *any* testing
>requirements to operate in the ham bands these days?

Yeah, regulation. Clearly, there is working regulation on ham bands. And there
is no regulation on CB band, unless you are running 10,000 watts.

So, you already have both. If you don't want to test for anything, there is CB.

Well, they ask you 35 questions. I read the queston pool book 3 times. There had
to be hundreds of questions. So to answer your question, ye, I think they should
keep the test. Clearly, I learned from it.

You don't sound combative. You have a different opinion. You make some valid points. But as I said before, there is a licensed and unlicensed option. Now, what you might be asking it to expand the CB band to have more unlicensed frequencies. I would not have a problem with that.

I did actually enjoy reading those books. So whether the questions are dumb or not, I did learn a few things.

The few recent and paltry increases hardly compare to the impact
caused from the length of time it has been held extraordinarily low.
And since the economy is being manipulated by the Fed, there isn't
much point in speculating whether inflation is bad or good since the
results won't follow their natural economic course -- the end result
is that it's good for the banks of the Fed.

>No, the trade deficit with China is due to China pegging their

The US consumer doesn't borrow money at the prime interest rate.

>Yes the borrowing has gone to China in the flow of currency for goods.

But consumers spend money that is borrowed from consumer lenders at
consumer interest rates. If any of that money came from the Fed it did
so indirectly.

>You ought to look at some data on the US economy lately and not dwell
>on what happened 6 yrs ago. Look at trends of government spending,
>consumer debt, employment numbers.

I look at a lot of numbers, including the ones you mentioned. But
while many of those numbers look good on the bottom line, they are
terribly misleading (as I'm sure you are already aware).

For example, Bush claimed to have created a total of 9 million new
jobs at the end of 2004. Now a person is employed (according to the
executive administration) if he/she works no less than one hour a
month. IOW, those 9 million new jobs could be the economic equivalent
of only a million or so full-time jobs. And that doesn't account for
the wages earned at these jobs, many (or perhaps most) of which are at
or near minimum wage. Nor does it account for lost pensions, wage and
benefit cutbacks, people that were forced into lower-paying jobs, or a
host of other employment statistics that don't show up in Bush's count
of 9 million new jobs. So the -real- issue is -not- how many new jobs
have been created, but what the effect has been on the GNP per capita,
and the effect hasn't been positive. Bush may have created 9 million
new jobs but the average household income -DROPPED- by 9%. In my book
that's called a 'loss', especially when prices have actually increased
in the same time period. But then you have to look at how inflation is
calculated, which is another horribly misleading statistic.....

I have a President Washington uniden 858 chassis with an 8719
on it.
I purchased rig used and it has talkback in it. I would like to put a
switch on the talkback to disable it.
Does any one know specifically what is done for the talkback mod on
this President Washington.
Thanks

No, the point is that there is no institution anywhere in this country
that denies anyone the "ability" to vote. Despite your insinuation
that this happens and championing this as your main excuse for why
your side lost the last election.

There were still more wars headed by democratic presidents than
republican ones.

> And maybe you forgot about Panama and
>Grenada.

Or the flubbed rescues attempt in Iran?

The Balkans? Kosovo?

None of which were "wars" in the truest sense.

>
>
>Coerced? LOL! Contrary to your warped spin, the president pretty much
>controls the budget -regardless- of who has a majority in Congress
>unless that majority can override a presidential veto, which hasn't
>happened in decades.

No, it's not that easy or clear cut. The president can propose all
sorts of bills, but if the congress shoots them down, they never see

the light of day. Similarly, the congress can approve a bill and the president can veto it, and it normally dies there. The point is that in order to move past this partisan deadlock, it requires some compromise. And that is exactly what George H.W. Bush was forced to do, when he allowed democratically sponsored tax increases to pass through along with measures that he wanted. It was all part of the deal.

>The historical trends of the budget follow the
>leadership in the White House, not the Congress. Your insinuation that
>Congress has more control over the budget than the president is
>nothing but a slick way for Republicans to take credit for Democrat
>achievements and blame the Democrats for Republican failures.

Which is exactly what happened. Democrats are known (By everyone except you apparently) as the ones who tax and spend. Republicans normally slash and cut. The president can "propose" anything he wants, but if he doesn't have congressional buy-in, it goes nowhere. That's the wonderful thing about our government's checks and balances.

Clinton was a master spokesman, and a skilled negotiator. Once republicans gained control of congress, he knew he was in for a fight. Consequently, his policies moved from the left (Gays in the military, universal healthcare) in the beginning of his term, to much more centrist (Balanced budget, tax cuts, welfare reform) and closer aligned with those points which republicans also champion. Clinton took something like a balanced budget and welfare reform away from the republicans when he claimed them as his own. Republicans were not about to shoot down bills which were ideologically appealing to them, so they passed. Clinton won a psychological and tactical victory by being able to claim victory, even though the groundwork had lamented for years with republicans in congress. He took an idea that republicans could never get passed (Since they didn't have control of congress until Clinton was in office), called it his own, and managed to take credit for it. That bought him some political capital, and allowed him to leverage that capital to successfully oppose congress when it shut down over a budget impasse, and successfully managed to blame republicans in the eyes of the people for his refusal to budge.

When you have such a stalemate, perception is everything. If the people perceive that the president is at fault (Especially when he's looking at re-election), then his support dies. The same is true if the congress is perceived to be at fault.

Clinton, with his smooth talking demeanor managed to do just that. But it was the hard work of republicans that brought these issues to light.

And I paid $.27 a gallon for gasoline in 1970 too. The house I sold
for $110,000 in 1999 was only worth about $28,000 in 1970. The numbers
don't tell the whole story, unless all the conditions are also known.

That's one of my most fold memories of the 70's CB boom. Some of the
"breaks" were pretty large and a ton of fun. The best one in my area
was held at a small local amusement park, which was great for us
teenaged kids at the time.

There were always vendors hawking their latest equipment and
accessories. Then there were those guys selling amps out of their
trunks ;-)...

Maybe not a community or Some state college's, but most want some
sort of aptitude test to make sure you are not wasting the teachers
& university's time.

> And the reason for the test to drive a car is to show something in the way

If you can read 20 to 30 WPM, would you want to here somebody
pounding out only 5 WPM? Otherwise would you want to see the bands
allocated to certain speeds? Point being, it would be called a qualifying
test, to make sure you are able to operate in the mode you test for.

>
> Why have a test to operate any mode in any ham band these days?

Most modes you are correct, but CW is almost an art, as such is
dieing out.

I am sorry, but this is a poor example. First off, some colleges require a basic math/algebra and English test. Even where you don't have to take a test to get into college, you still have to take a ton of tests to graduate.

If your point is that you don't need a test to start something, then you are correct. But in many skilled professions, jobs, etc, most require some sort of test taking or licensing procedure. Please find me a college you can attend that will give you a degree for just showing up, and not taking tests.

>As long as I paid my bill, they allowed me to go to class.

So what? Are they going to give you a degree because you paid your bill? Were you allowed to sit in on advanced classes without passing earlier pre-requisites, just because you paid your bill?

Check out the final word on the global warming issue. Go to the NY Times and search for Philip A. Cooney in the search function. Here's an excerpt verbatim from over the weekend:

-Begin NY Times Article-

Bush's Environmental Editor
"Philip A. Cooney's job in the Bush administration is akin to the food taster of a bygone age. Instead of taking the first bite of the royal pudding to make suree it's safe to eat, Cooney is the first to see scientific reports relating to climate change before they are released to the public. He then edits the text to his political bosses' liking, even if that means twisting the truth, which this administration seems to view as poisonous. Typical was how Cooney marked up a draft report-obtained by the NY Times-that was supposed to help Americans understand what their government is doing about global warming. Where the draft stated a clear role for the Climate Change Research Initiative "to facilitate ful use of scientific information in policy and decision making," Cooney injected uncertainty. Under his rewrite, the final report reads that the CCRI's role is also to "to reduce the significant remaining uncertainties associated with human-induced climate change." Who said anything about uncertainties about global warming? Not the broad scientific community. Not our allies such as Britain, whose leaders have been trying to convince us to take the problem seriously. Cooney's qualifications for drawing such conclusions are suspect. Before becoming Chief of Staff to the White House Council on Environmental Quality, he was a lawyer without scientific training and a lobbyist for the American Petroleum Institute. As a producer of the main culprit in climate change -fossil fuel- the petroleum industry has an entirely different take on global warming. Maybe that explains why Cooney can turn a definitive statement about the threat from raid melting of the polar ice caps into this seemingly benign gobbledygook: "Warming could also lead to changes in the water cycle in polar regions." This isn't the first time the Bush administration has played loose with the truth or allowed a special interest group to influence outcomes that were based on science/. A group of renowned American scientists has criticized the administration for stacking advisory groups with unqualified or conflicted experts, censoring reports by goverment scientists and failing to seek independent scientific advice. In the hands of a revisionist like Cooney, that could turn into high praise."
-end of article-

On Fri, 10 Jun 2005 11:08:32 -0400, iamnotgeorge@webtv.net (I
AmnotGeorgeBush) wrote:
For
example, take the layoffs GM just announced. Many are single parents
with school age children who can not go back to school AND support a
family.

>Why are they single parents in the first place?

Such has nothing to do with the layoffs, but death is one reason why
many are single parents.

>Yes, but it's a small minority.

Divorce is another reason and thsoe folks are "no small minority". There
are tons of reasons that single parents exist. In fact, if you check the
stats, I believe half the children in the country are from homes where
both nuclear parents are not present.
What should they do, Dave? They lost their well paying jobs and medical
insurance for themselves and their children.

>Job retraining is usually available for people

>displaced by layoffs.

You're way off. Job training is NOT usually avaliable for those laid
off. In fact, job retraining availability is available to only an
extremely small percentage of laid off workers.

You need to realize many can't move away for myriad of reasons, such as
caring for an infirm parent nearby in a care facility for but a single
example.

>Most people have large extended families.

Most? How you figure that?

>Uh, probably because of genetics and

>reproduction.

So genetics and reproduction is your reasoning for claiming most people
have large families. Odd, the US census says otherwise.

> I know the concept of family has become

>somewhat foreign with today's younger

>generation.

Why eliminate your chosen term "large" now, when applying to families?
It changes not only the subject, but the entire point you were
attempting.

> No one branch of a family should be made to

>bear the burden of such hardships

>themselves.

Where should these folks turn, then Dave? AS I said, the US census does
not support your claim. Perhaps you can point to a single example to
support your claim that most have "large extended families".
You are assuiming all families share your core beliefs. They do not.

>No, you are right. Many don't. But that's part of
>the problem.

Only for you.
That others do not share your core beliefs is
not part of the problem, Dave.

>Families used to take care of each other.

>There was no need for the government.

There was always a need for government.
This country is a melting pot of so many value
systems and beliefs that you will never have families all sharing the
same.

>Especially when you start emphasizing

>diversity instead of encouraging assimilation

>into the melting pot of American culture.

Diversity is what America is and has always strived for.

> People lean on the internal support of the

>family for temporary hardships.

We're not talking emotional or physical, we are talking financial.

>So am I. Most families can assume some

>hardship (such as elderly member care).

Again, you miss the boat. Most families are
middle class and can NOT bear the burden of additional extended family
health care costs. In fact, the opposie is true, the MAJORITY of
Americans struggle with affordable health care costs for themselves and
immediate family members, and you are claiming they have the means to
take on additional cost. That simply isn't so.

>The care of an elderly family member should

>not have to fall squarely on the shoulders of

>one (or two) people.

The cost of a family member's care should not have to fall on ANY family members, especially when the US is giving away free medical care to the Iraqis.

>A strong family negates the need for the

>government to stick its nose into it (At other

>people's expense).

I know many strong family units who would die for each other.

>Yes! And that's how it should be.

That
doesn't mean one has the financial means to provide a solution for another's misfortunes, especially when catastrophic health issues arise.

>.But a strong large family has more resources

>than a single person.

Yes, but you are again basing sucha claim on your false and unsupported notion that most families are large. This is not the case.
More children are now caring for parents than in any other time in our history. Many have taken out home equity loans to pay for health care and prescription coverage that they lost through no fault of their own.

>Yes, and those who are ambitious will pay it

>all back when they adjust to their situation and
>find a new vocation.

Many are disabled or seniors and can't work. MANY.

>There is a big difference between those who

>can't work, and those who chose not to, or

>who are underemployed due to lack of

>motivation.

The senior market, especially with boomers retiring, makes up the majority, not the minority.
Surely you aren't
presenting the idea that all those without health care can simply "adjust". You are assuming these people can all work when a great number of them, esecially in Florida are seniors with a host of health problems.

>What did these people do 50 years ago, when

>health insurance was still in its infancy and

>few people had it?

Argung past history is irrelevant to the current health care situation and crisis.
 What is your solution to this very large group? There is an entire contingency in many demographical areas of the US in which many are trapped in a sort of financial snare.

>Subsidizing health care costs is what put us in
>this mess to begin with. Private insurance

>subsidies have enabled the healthcare field to

>sharply increase costs. If the government got

>involved, it would only get worse.

The government DID get involved, Dave, and is VERY involved. They regulate and permit the actions of the crooked insurance companies and industry. The government is very much part of the problem.

>Unless, there were mandatory caps put on the
>costs

>Well, if you live in a town where 80% of the

>people work at "the factory" and that factory

>closes up, well yea the town's in a real pickle.

All towns have a major employer.

>.That's wrong. Had you said "many" or a "good
>deal", I would have to reluctantly agree with

>you. But the area where I live has no "one"

>major employer.

Again, you changed your claim. All towns have a major employer. If a town has 10,000 people and all work at a different locale, but twenty five work at the same place in town, that IS the major employed for that town.

>There is a collection of many smaller

>professional and technology businesses. The

>.same is true in many areas of California, and

>Texas.

Exactly..and all towns have a major employer, even if it's the federal government or local PD.

>Years ago, when the textile mills ran, the steel
>mills flourished, and other large factories

>dotted the landscape, there might have been a
>bigger impact. But most of those factories

>have been closed now for over 20 years, and

>have been replaced by smaller, denser high

>tech industries.

Which, in turn, would be a town's major employer.

>Except that it wasn't refined for gasoline until much later. Otto
>invented the IC engine to run on alcohol, not oil or gas.

It doesn't matter what the I.C. engine was invented to run on
initially. It's what it eventually ran on as a practical motor car
engine that matters.

From:
http://www.radford.edu/~wkovarik/papers/fuel.html

"Another early developer of the internal combustion engine was German
inventor Nicholas August Otto. In 1860, Otto used ethyl alcohol as a
fuel in an early engine because it was widely available for spirit
lamps throughout Europe. He devised a carburetor which, like Morey's,
heated the alcohol to help it vaporize as the engine was being
started. But a January 1861 patent application with the Kingdom of
Prussia was turned down, probably because heated alcohol carburetion
was already being widely used in spirit lamps.32 It is interesting to
note that Otto's initial financing came from Eugen Langen, who owned a
a sugar refining company that probably had links to the alcohol
markets of Europe. Of course, the Otto & Langen company went on to
success in the 1870s by producing stationary gas engines (usually
powered by coal gas) and the later "Otto-cycle" engine was fueled
primarily with gasoline but was still adaptable to alcohol or benzene
from coal."

>
>The environmental impact of farming? That's a -real- stretch, Dave.

It's true nonetheless. Ethanol comes primarily from corn. Corn needs
to be grown. Acreage used for ethanol production would be unavailable
for food growth. Also fertilizers used for corn, could cause a local
runoff problem in nearby waterways (as a boater I am conscious of
these). Excess nitrogen in ponds and lakes has a damaging effect on
the eco-system of that waterway.

>FYI, gasoline was originally just a worthless byproduct of refining
>kerosene from crude oil.

I see you've been doing a little crash internet researching. (What
happened to those wonderful books?) That's almost word for word the
description used on one site.

Here's some more:
http://www.ethanol-gec.org/corn_eth.htm

It would seem that there have been some improvements in the efficiency in the production of alcohol in the last 10 years or so. But there are still some issues. Still, I agree that we should look into it. I owe no allegience to gasoline. I tend to favor that which is cheap.

>there are no NO emissions

Wrong. There are "less" of some emissions, like hydrocarbons, but there are still some VOC's and other byproducts.

> (thereby reducing ozone pollution), there
>are almost no hydrocarbon emissions,

Wait, you just said above that there are NO emissions. Make up your mind Frank.

> no need for lead or other
>additives, no cyclic carcinogens, and the fuel burns more efficiently
>than gasoline. Ethanol is clean at both ends. Get educated, Dave.

How's this for education:

From:
http://www.dep.state.pa.us/dep/deputate/pollprev/AFIG/emissions_062596.htm

"Alcohol fuels provide America a way to reduce our oil dependence, but concerning exhaust emissions, test results are disappointing. Alcohol-fueled vehicles emit large amounts of some of the most reactive VOCs, particularly formaldehyde and acetaldehyde. Formaldehyde, acetaldehyde, benzene, and 1,3-butadiene are VOCs considered to be air toxics. Air toxics are known cancer-causing chemicals. Alcohol-fueled vehicles usually produce more air toxics than any other vehicle fuel."

>>Hindsight is always 20/20. We didn't know about such things as global
>>warming, ozone depletion, the finite availability of fossil fuel, and
>>the need for truly renewable fuel sources back in the early 1900's.
>>Oil was cheap, easy to extract, and plentiful. It was a no-brainer
>>back then.
>
>
>Wrong again, Dave. Read up on the Free Alcohol Bill of 1906.

So you're denying that oil was cheaper to produce?

Read into the term "Net Energy Value" and then see how it has applied to alcohol over the years. Only recently has the technology advanced to the point where the NEV value is significantly positive.

If you would agree to back off on your blind, relentless quest to call me wrong at every turn, I can certainly agree that alcohol has the

potential of augmenting and offsetting our need for oil. At the current high oil prices, alcohol may be able to compete on a price basis. But cars cannot run on pure alcohol without modifications. Alcohol attracts and retains water, which cause the corrosion of metal parts. Alcohol also deteriorates rubber parts. Some changes would also have to be made to find the optimal stoichiometric air fuel ratio for proper combustion. For gasoline it is currently around 14.7:1. For newer cars with fuel injection systems and OBD-II Engine management systems, the changes could be made in firmware. For older cars with carburetors, the changes would have to be done by changing jets and metering rods (After replacing all the rubber parts).

><snip>

>provide the most benefit for us -as- those changes occur.

Which is what I meant when I said to anticipate and "adapt" to those changes. For instance, if I was a "young-un" in school right now, I would not pick manufacturing as a career path. Right now your best bet seems to be to pick a career that deals with either information, technology, entertainment, or professional services.

>Mexico only reduced labor to about $5 per unit. We were doing about 1+
>million units per year. In high volume, high automated manufacturing,
>labor is not your major cost factor. It is overhead and variations.

No argument. Overhead,as well as direct labor,is cheaper in 3rd world
countries. My company moved a bunch of product lines from Taiwan to
Mexico, just to save a buck or two. When you make millions of items
that adds up to a substantial profit. There is no way that a U.S.
factory could compete under those cutthroat conditions.

One of our products had a BOM of $43. We sold it for $99. Even
considering shipping, R&D and other absorbed costs, that's a healthy
margin. But when we started a new advanced product, the BOM was
initially over $70 (due mostly to brand new VLSI chips) and market
research showed that we could only expect to sell it for $115 max.
When other costs were factored in, we were actually selling it at a
loss (In order to get market exposure). So we had to start an
aggressive cost reduction program to cut both material and labor costs
to bring our margins back in line. And we already manufactured

overseas. Such is the nature of high volume, low margin products.

>Overhead in the US has gone ape in the past ten yrs. This includes
>electricity, insurance, worker training and other items. Variation is
>the changes in cost of piece parts due to volitility in shipping cost
>due mainly to variations in oil prices.

Yes, this is very true. But shipping costs and the effects of oil
prices should be the same no matter where you make it. Those factors
are just as volatile here as there are in China.

David T. Hall (N3CVJ) wrote:
The number of
those without health care (seniors included) far outnumber those healthy
workers who get laid off.

>Most companies who employ skilled workers,

>have some form of healthcare coverage as

>part of their benefits package. I've never had a
>job without it.

Your personal situation is irrelevant to the majority. A growing trend
has been major employers hiring at 32 hours or less to avoid offering
health care benefits.

> Resumption of healthcare coverage is tied to

>.the laid-off worker's need to find another job.

So what happens in between when on eneeds prescription medication? When
one is laid off from their job and offered the mandated COBRA, the cost
is always greater than the original. Now, you have people who can not
only pay their bills, but can't afford their medical covereage. What is
your solution?

>That way, no one layoff can cripple a

>significant portion of the population.

Depends what you consider a significant portion of the population. I can
think of several examples..Reagan importing cheaper metals from the
Asians decimated the steel industry in Pa and Ohio.

>I live within an easy drive of 4 different steel

>plants. The towns that surrounded them were

>dependant on those mills for the majority of

>their income. But 20 years later and things

>have pretty much recovered. People can get

>pretty creative when they need to be.

Recovered from what? You said it couldn't happen, but by invoking the
fact they recovered, you unwittingly admit the towns were indeed
crippled from such layoffs..

In many of those
industry towns, this led to the closing of the
mills and a significant layoff of those town's
populations and many of those towns became ghettos or ghost towns
because of that.

>Not in my area. The towns (Allentown,

>Phoenixville, Fairless Hills, and

>Conshohocken) are still going strong, although
>the people who live there are forced to

>commute to work now.

>The towns are going through a revitalization,

>where the old factories have been leveled and

>in their place have sprung up huge business

>campuses.

Those towns were never considered large steel towns or large steel
industy towns. Think Pittsburgh and similar cities in Ohio.
Same can be said with coal
mining and to a certain extent, the auto industry. History repeats
itself.

>Yes, as we continue to become more efficient

>at manufacture,

Whaaaa? Manufacturing is DOWN, not becoming more efficient.

> the nature of jobs have evolved along with it.

>The automobile pretty much ended the

>demand for blacksmiths.

> But we shouldn't

>blame the automobile for causing the demise

>of the blacksmith industry. The smart

>blacksmith went back to school and learned to
>repair cars.

Blacksmiths were never a large industry and the position was never one
of those that most in a city were employed, rendering the example
fruitless and non-related.

>That's one of the reasons why I still live where

>I do. I was once contemplating a move to both
>Florida and North Carolina. But the lack of

>.diverse skilled jobs and much lower pay

>scales pretty much nixed that move.

Lack of diverse skilled jobs?

>Excuse me, I should have said diverse high

>.paying skilled jobs.

When was the last time you checked the
stats? Florida has led the country in adding new jobs and has not felt
the inflation the country has felt the last so many years. The pay here
was always offset by the lower cost of living.

>That's a myth.

Ok,,in the same manner you claimed one who lived in another state could
not tell you about Pa, what makes you feel you can tell a lifelong
resident of another state about their state?
It;s not a myth, Dave. There is no state income tax and prices have
always been lower in Fl,,until recently (last 10 years).

> Yes, there are certain costs which are lower

>in Florida. The homestead exemption saves a

>bundle on property tax. Homes are (were)

>cheaper. There is no state tax, and utilities are
>somewhat lower.

Utilites are higher, especially electric, as the majority of homes do
not have gas. Gas was only recently introduced as a choice for heating
and cooking, and even in most cities, it has to be trucked in (propane).

> Yes, many costs ARE lower to an extent. But

>if you try to buy something like a car, gasoline,
>or a major appliance or consumer good, the

>cost is pretty mush the same as it is in any

>other state.

Again,,nope. Auto costs are not only in better condition (speaking of
used, of course) but new cars are somehwta cheaper here, so are most
manufactured goods. The exceptions are the tourist areas and coastal
regions that are developed. I can get a gallon of milk for 3 bucks here.
I can get a gallon of milk in Chiefland for 2.29. this is the norm, not
the exception.

> And at 30-40% less of a salary, for

>the same job, that limits one's buying power.

Yep,,salaries for workers who work for another have always been low
compared to the northern states.
The only people that have
trouble adjusting are those who live beyond their means.

>Living beyond one's means is somewhat

>subjective. It depends on where you are living

>and what your earning power is.

Your salary has nothing to do with one living beyond their means. One
can make 200 bucks a week and live beyond their means, just as one who
makes 2000 bucks a week can live beyond their means. It is also not
linked to geography or earning power.

_
 People like you
usually get what is coming in the end

>Yes, we tend to survive, because we don't

>look to other people to blame, or to the

>government for help.

What about this job retraining you speak of? Who pays for it?

>We do. That's one area of assistance that I'm

>very much in favor of. Training enables people
>to become self-sufficient.

Yet, govvernment medical care enables people to live and be healthy,
yet, you are against that.

>That's what self sufficiency and personal

>responsibility are all about.

One can not be self sufficient is one is sick and ailing.
Looking to the government for assistance is perfectly acceptable in many
instances, Dave. There are thousands and thousands and thousands of
people STILL homeless in Fl because of the hurricanes.

>Yes, Yes, and YES. I'm totally cool with

>hardship TEMPORARY assistance.

Many of the major
insurance companies are STILL unable to pay for their customer's claims.

>And my insurance premiums have increased

>as a result. Yet the company swears that it

>has nothing to do with the large payouts they

>.had to make to cover those claims. Somehow
>I don't believe them.....

If it wasn't for the government assistance (what you always refer to as "handouts") with food, water, shelter, etc., these folks would be on the welfare tit.

>What's the difference? A handout is a

>handout, unless you are expected to pay it

>back. Government assistance or welfare?

>Comes from the same place. But again, I have
>no problem if it's temporary only.

Many folks would benefit and live healthier and longer if they were permitted even temporary medical assistance from the government,,,so are you for it or against it?
  Now please 'splain how being self-sufficient and personally responsible can help these folks who paid their premiums on time faithfully all those years, had their homes destroyed or damaged to the point they are rendered unsafe for living conditions, lost all their possessions, yet still manage to survive by living in tents, can bring them up out of their hell created by the insurance companies who are regulated by the federal government.

>The insurance companies are obligated to

>make good on their claims.

But they AREN'T making good on their claims, Dave, and this is the problem.

>And they should be made to repay the

>.government for any "handouts" it had to pay

>to house people until the insurance companies
>settled.

The government disagrees, this why FEMA was created.

> Call it an "incentive" clause.

You really have no clue the
magnitude of damage these storms had on many people in Florida.

>I saw some of it when I was there last fall.

There
are so many hardworking people that are struggling just to feed their kids, living in tents, and waiting for the federal government to crack down on the insurance companies and make them ante up.

>.Which they should.

But they AREN'T doing it, and the government is STILL permitting these companies do write more policies.
To suggest these
fine families are anything less than responsible or self-sufficient shows you haven't a clue, Dave.

>I never said anything of the sort. I'm not talking
>about temporarily displaced people. I'm talking
>about perpetual slackers.

Does being displaced for a year eqaute your idea of temporary?
On the contrary, I will lay odds these
folks are illustrating survival skills and grit that you couldn't handle.

>Based on what?

Based on your invoked claims of your material possessions.
Many of these folks have been living out of doors, literally, for almost a year and cooking on fires or grills.

>I do that for fun.

Try this for a year, when all of your equipment enabling you to partake in this "fun" has been destroyed, then you -may- be qualified to speak of what these people should and shouldn't do.

–
and karma, luck, divine
intervention, whatever, will dictate you end up just like those you blame for being poor, black, queer, liberal, etc. In fact, your daughter may quit school, commonly become pregnant to an African-American or three, have many children and volunteer at the ACLU before realizing she is a lesbian and needs a job to pay the attorney for the crack and prostitution charges.

>Not likely because she will have grown up in a

>solid supportive family that helps each other

>and promotes open communications and a

>strong work ethic with solid morals.

What the hell does that have to do with having children to another race?

>.Nothing. If she wants to marry a black guy,

>I'm

>cool with it. As long as they love each other.

You can tell you are about to tread in unfamiliar parenting territory. Just you wait. Mistakenly believing that strong morals and all that good stuff aimed at raising your child will prevent her from making her mistakes is the mistake many people make. In fact, many of us who have raised children to adults know better than to believe such tripe, as we

were there long before you, Dave. If what you say were true, drug addicts and prostitutes and the like would come from only families that were broken and had no communications, strong work ethic or solid morals. Addiction has no cultural, socioeconomic boundaries.

>Yes it does to a certain degree.

No, it doesn't, at all. Crack is found in the whitest suburbs as well as the darkest ghettos. In fact, the children in this country in addiction programs are overwhelmingly white and from middle class to well -to-do families.

>Kids rebel and turn to things like drugs

>because they need an outlet for their energy,

>or they are craving attention.

Among a boatload of reasons you ignore...abuse, peer pressure, self-esteem, curiosity, lies told to them by those who buy into the government's bullshit war on drugs...etc. It's hypocritical of us to tell the kids to just say no when we ply them with ritalin from a young age and mom smokes cigarettes, drinks cup after cup of coffee, and dad drinks alcohol, even if it's the cocktail with dinner.

>Provide them with many sorts of creative

>avenues to release, and there will be no need

>to turn to destructive behavior.

Again,,,bullshit.

>A kid who plays sports, acts in drama clubs,

>plays in the band, participates in the arts, or

>has a worthwhile hobby, will be way too busy

>to hang out with the slackers.

Your mistake is believing drug use by children is inherent to these you call "slackers".

> Giving a kid an activity that they can be proud

>to excel at and bolster their self esteem (While

>learning what it means to truly EARN it) builds

>character.

Yup,,character that is torn down when these suburban kids from loving families begin using harmful drugs.

> Lastly, never lose communication with them.

>Set your ground rules while they are young,

>and they become adjusted to them. Let a child
>run amuck when they are young, and then try

>to reign them in when they hit the teenaged

>years, and you've already lost. Talk to them

>always. Know all their friends (and their

>parents).

> Make sure they know that you're

>always there for them. Support them in

>whatever they do. Show up at their plays,

>cheer them on at their games. Listen to their

>teachers when you have conferences. Trust

>them enough and allow them to make small

>mistakes, but keep on the lookout for major

>ones. In short, STAY INVOLVED!

Al that is great advice, but is irrelevant in the real world.

>I know how my parents raised me. I know from
>a child's perspective which disciplines worked,

>and which ones didn't.

> I use what I learned to my advantage as a

>parent.

You ignore the fact that peer pressure is greater today than you can comprehend....your advice has been followed time and time again, yet there are great kids who succumb to drugs every day.

>
>

I've always been able to read *much* faster than I can copy code. I don't understand what you're getting at there.

No need to divide up the freqs for different speeds. Generally, faster is lower in freq by gentlemen's agreement. Not always, but generally from what I've seen. FYI, there's currently a proposal to divide up the freqs based on bandwidth requirements.

What's the difference between someone who passed the 5 WPM code test and has now forgotten it and someone who never learned 5 WPM? Neither operate the mode. So why not just have some freqs dedicated to those who want to use it and quit testing for it? If you can operate voice on 2M, you can operate voice on HF. Why make people qualify for a mode they have no interest in? If certain freqs are dedicated to CW, why make someone qualify for it if they're never going to use those freqs?

There once was a time when the only way you could qualify for the highest class ham license was to show you could copy 20 WPM code. Someone stood up and said, "Hey, the international requirement is now at 5 WPM." So we did away with element 1b and 1c. WRC-03 did away with code entirely. So why are we still testing element 1a?

Guy

IAmnotGeorgeBush:

I have a racing bike. In summer evenings I love to ride the paved levies and bike trails around my city in California.

I am always amazed at the rise in homeless people I see along bike trails running along side the few rivers there are here... homeless living under bridges and, in generally out of the way places... I see the police and sheriff constantly "moving these people on", there really is just no place for them to go...

Over the past years I have watched ambulances and coroners pick up bodies of these people who obviously did not receive help or proper medical care...

I have watched welfare reduced, and a large theatre restored and a sports arena built with the public monies... and the homeless go unassisted... I have watched illegal aliens taking over the jobs which these Americans could once have used to pull themselves up and out of the poverty they exist in...

It really is just too much to describe... I feel ill when I just describe these conditions I have witnessed...
I have given in to hopelessness for these poor souls--as no one is even working on a plan to help them, at lease one which I have seen mention of...

Also, many blame drugs on causing all of this... my gut feeling tells me that belief places the "cart before the horse", as I believe these people finally are forced to turn to drugs to escape the conditions they are finding themselves in, indeed, I almost think I see many preferring death to these conditions--and they give up...

I think a certain group of people must enjoy watching all of this... they frighten me worse even worse...

Warmest regards,
John

Believe it or not,
there are many in Florida, more in the rural areas, who rely on no cash
at all, and it's always been that way.

>Talk about self sufficiency! In this area, that

>just isn't very practical. Unless, of course,

>you're Amish.

One doesn't need be Amish to farm, hunt, and fish.
Self-sustainment has always been
a large part of the original Floridians and their families.

>.Like that guy in the swamps of Tampa that

>was just forced, by eminent domain, off his

>land to the tune of 5 mil?

Ain't that something?

–
They have
survived Indians, draughts, plagues (such as citrus canker that
decimates entire industries and family enterprises) hurricanes on a
regular basis..on it goes. Florida has never been the cushy place your
ads in between Homer Simpson and reality shows depict. Miami and Disney
have always presented an unrealistic portrait of Florida. It is still a
very much undeveloped state,

>That's because much of it is swamp.

Most of it is scrubland, not swamp.

>There's an on-going battle between rabid

>developers who want to drain the swamps,

>and the ecologists who want to preserve the

>natural ecosystem

Yep,,,,a damn good time to support the "whacko" environmentalists.
-
There are state roads that traverse through the state east and west that
have nothing in between the coasts except for a few small unremarkable
towns with populations in the double digits.

>Sounds like the Pine Barrens in New

>Jersey......

–
>What's your excuse not to?

I can always sell my home and move north (or inland) and buy incredible
acreage and 4 or 5 times the home I have here and still have enough left
over to live fairly well.

>I could do the same. For the price that my

>home can get in today's market, I could move

>area and by a similar place for a fraction of the
>cost. But there's no place to work at a livable

>wage. But when I retire, that's probably what I

>will do.

Our home values increased over 70% in the last ten years in some areas.

>My home appreciated about 70% in the 5

>years that I've lived here. It's unreal, and it

>won't last.

Hell, I was talking Florida as a whole. My home value increased 100% in
the last 8 years, as has many in the flood zones (near or on water).

> I pity the people who are buying into the

>market now with a 10% down payment and

>will likely find themselves upside down when

>the bottom finally falls out of the market.

Some say the bubble will hold here, some say there is no bubble. The
problems will be those who took on bigger and better homes when the
rates were at all time lows instead of paying off their debts. Taxes
when I bought my original home here were less than 300 bucks a year.

>I'd die for that rate. Right now, I'm approaching
>$5500

Now they are over 3G.

>Even 3G would be better than what I'm paying
>now.

Well, we'll hit that in a few more years. Houses on the actual tourist
beaches are paying above and beyond that.

_
Houseboats are another option for those of us
who tame the sea.

>I once toyed with the idea of living on a boat.

>But I have far too much junk to make it

>practical. Especially with family

>considerations. If I was a loner, I could live in

>boat or a trailer and I'd be just fine.

Dude, check out some of the yachts,,,,I know a guy who lives in the
Vinoy Basin and has two dirtbikes on board for he and his son.

_
Of course, I can always throw a
trailer or mobile home near JerryO's place after selling my home and
never have to worry about money again.

>At least you'd have a drinking buddy ;-)

Coca Cola only. Besides, I'd rather talk skip than drink. I'd save a lot
of truckers, as Jerry would be chasing my impossible-to-find signal all
the time.

So now some jerkoff who got his college degree at an eastern liberal slime slick institution writes that the administration is deliberately censoring all global warming news. Right. You mean the Euro-trash media is also under this guy's control? The punk editorializes and shows no documented sources to support his drooling.

Predictably, the current administration is blamed for any and all of the industrially wrought climate changes since the dawn of man...and equally predictable is FUGGLY KID's handler sucking it up and spewing it out.

This is the same ignoramus and registered moron who said the Bush administration lied about WMD in Iraq. Of course, his wristflipping self never replied when I, his intellectual master and superior in every aspect of the phrase, posted the stuff the democrats were saying about WMD in Iraq, LONG BEFORE Bush took office.

For the edification of those who would rather hear an ACCURATE version of what was said than the idiotic dribblings of an intellectually deprived and pudding brained hunk of parrot droppings, here is a list of liberal comments about WMD in Iraq. These are sourced by name and date, and thus easy to verify. Unlike wristflipping Bush hating jackasses, those of us who can use the words of the liberal nutsacks by throwing them right back in their snot running, saliva drooling faces have no need to talk junk with no backup.

Here Ya Go!

"One way or the other, we are determined to deny Iraq the capacity to develop weapons of mass destruction and the missiles to deliver them. That is our bottom line."
- President Clinton, Feb. 4, 1998

"If Saddam rejects peace and we have to use force, our purpose is clear. We want to seriously diminish the threat posed by Iraq's weapons of mass destruction program."
- President Clinton, Feb. 17, 1998

"Iraq is a long way from [the USA], but what happens there matters a great deal here. For the risks that the leaders of a rogue state will use nuclear, chemical or biological weapons against us or our allies is the greatest security threat we face."
- Madeline Albright, Feb 18, 1998

"He will use those weapons of mass destruction again, as he has ten times since 1983."
- Sandy Berger, Clinton National Security Adviser, Feb, 18, 1998

"[W]e urge you, after consulting with Congress, and consistent with the U.S.Constitution and laws, to take necessary actions (including, if appropriate, air and missile strikes on suspect Iraqi sites) to respond

effectively to the threat posed by Iraq's refusal to end its weapons of mass destruction programs."
- Letter to President Clinton, signed by Sens. Carl Levin,Tom Daschle, John Kerry, and others Oct. 9, 1998

"Saddam Hussein has been engaged in the development of weapons of mass destruction technology which is a threat to countries in the region and he has made a mockery of the weapons inspection process."
- Rep. Nancy Pelosi (D, CA), Dec. 16, 1998

"Hussein has ... chosen to spend his money on building weapons of mass destruction and palaces for his cronies."
- Madeline Albright, Clinton Secretary of State, Nov. 10, 1999

"There is no doubt that ... Saddam Hussein has invigorated his weapons programs. Reports indicate that biological, chemical and nuclear programs continue apace and may be back to pre-Gulf War status. In addition, Saddam continues to redefine delivery systems and is doubtless using the cover of a licit missile program to develop longer-range missiles that will threaten the United States and our allies."
- Letter to President Bush, Signed by Sen. Bob Graham (D, FL,)and others, December 5, 2001

"We begin with the common belief that Saddam Hussein is a tyrant and a threat to the peace and stability of the region. He has ignored the mandated of the United Nations and is building weapons of mass destruction and the means of delivering them."
- Sen. Carl Levin (D, MI), Sept. 19, 2002

"We know that he has stored secret supplies of biological and chemical weapons throughout his country."
- Al Gore, Sept. 23, 2002

"Iraq's search for weapons of mass destruction has proven impossible to deter and we should assume that it will continue for as long as Saddam is in power."
- Al Gore, Sept. 23, 2002

"We have known for many years that Saddam Hussein is seeking and developing weapons of mass destruction."
- Sen. Ted Kennedy (D, MA), Sept. 27, 2002

"The last UN weapons inspectors left Iraq in October of 1998. We are confident that Saddam Hussein retains some stockpiles of chemical and biological weapons, and that he has since embarked on a crash course to build up his chemical and biological warfare capabilities. Intelligence reports indicate that he is seeking nuclear weapons..."
- Sen. Robert Byrd (D, WV), Oct. 3, 2002

"I will be voting to give the President of the United States the authority to use force-- if necessary-- to disarm Saddam Hussein because I believe that the deadly arsenal of weapons of mass

destruction in his hands is a real and grave threat to our security."
- Sen. John F. Kerry (D, MA), Oct. 9, 2002

"There is unmistakable evidence that Saddam Hussein is working aggressively to develop nuclear weapons and will likely have nuclear weapons within the next five years ... We also should remember we have always underestimated the progress Saddam has made in development of weapons of mass destruction."
- Sen. Jay Rockefeller (D, WV), Oct 10, 2002

"He has systematically violated, over the course of the past 11 years, every significant UN resolution that has demanded that he disarm and destroy his chemical and biological weapons, and any nuclear capacity. This he has refused to do"
- Henry Waxman (D, CA), Oct. 10, 2002

"In the four years since the inspectors left, intelligence reports show that Saddam Hussein has worked to rebuild his chemical and biological weapons stock, his missile delivery capability, and his nuclear program. He has also given aid, comfort, and sanctuary to terrorists, including al Qaeda members .. It is clear, however, that if left unchecked, Saddam Hussein will continue to increase his capacity to wage biological and chemical warfare, and will keep trying to develop nuclear weapons."
- Sen. Hillary Clinton (D, NY), Oct 10, 2002

"We are in possession of what I think to be compelling evidence that Saddam Hussein has, and has had for a number of years, a developing capacity for the production and storage of weapons of mass destruction."
- Sen. Bob Graham (D, FL), Dec. 8, 2002

"Without question, we need to disarm Saddam Hussein. He is a brutal,murderous dictator, leading an oppressive regime ... He presents a particularly grievous threat because he is so consistently prone to miscalculation ... And now he is miscalculating America's response to his continued deceit and his consistent grasp for weapons of mass destruction ... So the threat of Saddam Hussein with weapons of mass destruction is real ..."
- Sen. John F. Kerry ! (D, MA), Jan. 23. 2003

Now that twitlips and his other mealy mouthed wristflippers have AGAIN been called on the carpet for talking unsourced, stupid, slanted, liberal bilge water, lets just see what lies the Florida fruitcake comes up with next. It might get really outta line and out there knowing twitlips...he may even try to say he is heterosexual and does not collect jockstraps of men he fantasizes about.

PS Damned right he is not George Bush, twitlips couldn't make a pimple on the ass of whoever shines Mr. Bush's shoes.

>2 weeks to get from 21 to 38 years old.

That's the way it seems. The first 15 years goes by like molasses on a
cold day. Then before you know it, you're out of school. Then 21 looms
large just around the corner. Then, in what feels like 2 or 3 years,
you hit 30. Then the next 15 years goes by just as fast as the last 7
or 8.

I've been told by quite a few sage old timers that the older you get,
the faster time seems to go by. I guess it's all relative.

A common complaint. But the alternative of having several different
people on slightly different frequencies, requiring you to tune each
one for clean fidelity is, IMHO, a bigger irritant.

>Have it properly aligned by a tech with calibrated equipment.

That's good for you, but not for the other guys who align with a
"galaxy" frequency counter.

You are right about the TRC-451. I aligned mine 6 years ago, and it's
still rock solid on.

>The radio was hacked up when I got it. Now it's back to stock
>with the final placed off the regulator for dependability.

Mine is still basically stock, with the exception of an unlocked
clarifier. I can stand locked-on ones.

>That's my story and I'm sticking to it. :)
>

I miss those days. I enjoyed working with tubes (even if I got shocked
by them a few too many times). Radio was cooler, there was less
competition from "other" tech devices. The people were cooler, less
vulgar, and a lot more fun

Well, you'll find out a few years down the road.

Must be a right-wing reactionary.

Hope you aren't religious; the religious right pray to a liberal who was
condemned and crucified some 2000 years ago.

Facts, however, never seem to register.

The Antron 99 and the Imax -99 claim 9.9 DBI over isotropic.
In my scientific studies I have found this not to be true. More like
2.5 DBI .
I think this is because I cannot fiend this ISOTROPIC thing, just
cant get my hands on it.
I also find in my scientific studies of this Group That you are an
ASS HOLE that I can do with out!!!!!!!!!!!!!!!!!!!!!!!!!

Triple 5

No. I just purchased a Uniden and the tech talk me into getting the talkback put into the unit. Wish to heck I had not had it done!!!!!!!!!!

Will never own another radio with talkback in it. Fug!!!!!!!!!! This thing blows the doors off the pu even with the AM/FM radio turned off.

Yes, *everyone* rallied behind Bush when it first occurred. He certainly had good reason to go into Afghanistan when he did, but the weapons of mass destruction were based upon one individual. Folks responsible for intelligence attempted to warn that this individual was not reliable, but were told by superiors that was not what Bush wanted to hear.

So, the reality is that Bush is going to drive his own way and not pay attention to either facts, nor his constituents. There are over 40 nations on this earth with a higher life expectancy than Americans. And we spend the most per capita on health insurance. Go figure.

America is both feared and ridiculed throughout most of the world. Especially the civilized world, of which America is in grave danger of no longer being a member.

As to the college educated, please go ahead and inform me that pi is exactly equal to 3. I might also note in passing that there are some geniuses in other parts of the world that are eclipsing the American geniuses. I can only assume it is because of the extreme religious right zealots that the highly educated are being held back from stating facts or doing more research.

Are you a member of the John Birch Society? Perhaps the Ku Klux Klan?

If you are religious, remember to "beware of false prophets". Bush is #1 on my list.

Bush gets his votes from religious zealots. Remember, it is religious zealots in Iraq that are causing some of the problems (most of the problems I lay at George Bush's feet).

Wheee ... driving by 1976? Good lord, I have my girl friends initials on my
books along with my ham call sign ... and that was in 1962! I was driving
in 1964. I had my 1st phone and commercial telegraph in 1966 (along with my
extra).

Does this mean I'm more decrepit than you and Mopar, Shark?
:))

Dave,

Do you recoomended a decent Freq counter I can get on ebay for aound $40? They have a ton of older HP and BK Precisions. I had a Fluke 1900A, but it died on me, and I am looking to replace it.

Hello, guy

The fact is that folks should posses some minimal knowledge lest they
conflict with other folks.

There was no regulation of radio back in the early 1900s. No need. Once radio started taking off, there had to be some coordination or stations would be jamming each other.

Same with automobiles. At first, no licensing and no laws. Then, when some horses became scared of a horseless carriage, they put into effect 5 mph speed limits in some areas. Sometimes, someone had to walk ahead with a flag to warn folks that a horseless carriage was coming! Eventually, laws were formed to maximize usage to *everyone*. Otherwise, what if there were no stop lights, stop signs, and no rules about which side of the road to drive on?

Orville and Wilbur Wright didn't have to apply to anyone for a license to fly. There were no laws at the beginning of aircraft. Only once a number of planes were flying did they start to regulate it. For obvious reasons LOL.

As to taking your test, why would you have a problem today? I had last been on the air in 1969 and let my license drop around 1981 (not sure of the exact year). When I retook it in 1993, I passed the extra first time around.

If you have copied code past 13 words per minute, you won't forget it. You might get a bit rusty, but can pick it back up. In my case, I didn't brush up. Nor on theory either. The basics remain the same; I've been into computers since 1976, so any questions on gates, cpus, memory, etc. is a no-brainer.

Of course I missed some questions on where bands were. They've added a couple. You don't need 100%; in fact, I didn't feel like extracting square roots by hand (I can, but it is a pain - I'm not talking guessing here), so I simply checked off some answers. I knew I had already passed that portion so who cared.

As to no difference; perhaps not to put it on the air, but to understand what emission you are using and where you can and can not use it may just make a tad bit of difference.

I have to laugh about folks joking about IRLP and Echolink. I've used my 440 HT to chat with Australia with *no Internet* involved. All rf path, courtesy of a 10 meter link. Of course, that wasn't really a challenge; I simply heard the Aussies there.

What is fun is having the ability to change mode in a heartbeat. One guy on a 440 repeater was squaking that everyone should *have* to use Morse. Since the repeater owner was in the group, I asked his permission and got it.

40 words per minute MFM sent over the repeater. Shut him up in a hurry.

Is there a difference? I know one guy who *knows* so LOL.

For sale. Ex.cond. President Lincoln 10m. all mode mobile radio. This is the same radio as the Uniden HR-2510. Radio is about 10 months old and is the new model with the MRF-455 final. Only used as a receiver w/0 TX time on it. Have the original box,manual,mic,etc. Again....unit is like new. Price is $250.00 + shipping.

Also for sale. Palomar Skipper 350 watt mobile linear amplifier. Unit is in ex.cond. and I added a cooling fan to it (no extra holes). Very little use. Never mobile,was used in the house. Price is $80.00 plus shipping.

If you want them both,price is $300.00 plus shipping from 96001. Can email pics. Please contact my directly at kf6ikc@sbcglobal.net and not to the group as I rarely check look at the list.

Cool! What I was saying is that even though the code is a basic rate,
wouldn't
you rather have a test with more proficient people, than with people that
aren't
very good, but just enough to get their license?

>
> No need to divide up the freqs for different speeds. Generally, faster is

Yup I know that, but so is the gentlemen's agreement on 36 to 40 for
sideband
use on cb, but that not always the case.

> What's the difference between someone who passed the 5 WPM code test and
has

Because they at least spent the time to learn it, not take a multiple choice
test and sign their name at the bottom of the paper.

>
> There once was a time when the only way you could qualify for the highest

Don't know, but it's still a requirement to get the upper class license. I
don't agree
with that, but if they were to have a "code" only requirement license, that
would
be fine with me.

Hey, you knew my Mom :P LOL!! Did you ever have the chance to talk
with Bill Orr? He was a friend of my parents when I was growing up from
61 to 67. He was a pilot and used to fly up to a place called "Sea Ranch"
in northern Ca., they had a second home up there and used to go away
for the weekend with my parents and other friends.

Guess what, Mopar?

I had dinner with some friends. A good friend who owns a couple of construction companies was telling me he had a couple thousand rounds of ammo. Then he tells me that he bought 19,000 rounds of 12 gauge shells. I asked about why he stated 2,000 rounds. He said that was for the 9mm! He has 7,000 rounds for some large rifle (don't remember). He stated that he asked for different loads in the 12 gauge shells. They loaded two pallets on his truck. He took them home. He was surprised, however. He didn't write a check nor use a credit or debit card. When he plunked cold, hard cash on the counter, they gave him another discount.

He knows what Bush's "homeland security" is worth. It is pork for the "right" states.

Do not approach that guy's house in the night unless you come right up the driveway in the lights (a ton of halogen floodlights triggered by heat/movement do come on with movement outside the house). Otherwise, beware of flying objects.

They will be bullets.

LOL. So much for homeland security. Anyone found the weapons of mass destruction, yet?

BTW, he got 99 out of 100 on the last skeet shoot. Not bad for a guy over 60 years old and 300 pounds. He also just won the Hampton trophy (after my grandfather, George Hampton) shooting skeet. He is being raised in rank to the #2 slot in the Shriners locally. He has his head screwed on real well and does not take nicely to anyone messing with his family. He has no problem with revolvers, shotguns, rifles, nor any other object that shoots bullets - either single shot, semi-automatic, or automatic.

I have no idea how much ammo he has in his house. He just told me tonight that he shifted the ammo into a number of large toolmaker wheel-around carts so they can be wheeled out of the house in case of fire.

LOL!! I have probably have 3000 7.62 x 39, 1000 of 30-06, 500 45acp, 100
12ga.

I paid what ever, but I'm not worried, just love to shoot the AK fully auto.
The
Garand is much more fun to shoot though, the Remington Rand 1911 A1 is been
my favorite as of late ;)

I take it you guys decided against duct tape for protection?
Bwhahahahaha LOL

Ain't Bush unreal? Duct tape?

Anyone up for joining? They are upping the ante to $40,000 for first time enlistees. Heck, they only offered me $10,000 to re-up for Vietnam. I gave them my answer in a two letter word. It begins with an "N" and ends with an "O" .... :))

At least I had my option of getting out after 4 years of active duty ;)

Best regards from Rochester, NY
Jim

I've had my 1000+ rounds for a while now.

I've picked up rolls of "Duck" tape at discount stores, but I don't
use it for Bush's purposes.

Isn't that the one that takes you to Blakeslee for the festivals?

I can't post my backstage passes from the Gathering on the Mountain here.

Yeah, that's it, 83 to 81 to something past the Chesapeake Bay drainage area...

...somewhere on the other side of the stinky Susquehanna.

Heck, Scott, I'd love to meet up with you, Mopar, Landshark, and Twist. I'd give you all a lecture on rules and regulations - then we could laugh our butts off. Too many folks take too many things too seriously.

Rules are fine, but we don't need the idiots lecturing constantly. Better to go fishing or go for some off road stuff.

Heck, let Mopar bring his biggest, badest machine and I'll race him off road with my wheel-around walker :))

BTW, I can only copy 5 words per minute cw.

I also have a couple of bridges to sell to you, if you are interested ;)

Dang, that dood takes his guns quite serious eh? I'd think a guy like that would be doing his own re-loading, at least for the shotgun shells.

Homeland security or not, there's nothing wrong with plan B when it comes to protecting your home or family. Out here in the sticks where I live you'd be a fool to not have your own plan of attack...by the time the law gets out here, I will have dealt with an intruder my own way too. :)

That's cool that there's an award named after your grand pappy!

Remember back then there was not the cussing and name calling as what goes on now. In ham there is not near the abusive crud going on as on the CB freq's. Don't know why but it is there.

I wish that we didn't have to use a 10,000 watt kicker, even with a durned good antenna, to talk to the end of the block. And I put it in about the good antenna cause if you have a radio that won't get out without a kicker, it, once put in front of a kicker, all kinds of pitiful noises come out of it. It makes it hard to understand them and they keep others that have decent talking sets from enjoying what could be a really decent hobby for the price.

No, you got it wrong, twitlips...

We don't obsess, we LAUGH since we know it is true!
Defeated by what? You have done your limp wristed best for 5 years, AKC is still posting, still busting auctions, still getting the Feds chasing amp dealers, and still making you sit up and bark on command.

The only thing around here that even resembles a red herring is FUGGLY's cheeks after a night at the truckstops with you.

Good boy, here's a biscuit!

Thanks for the tip. I'm staying about 45 minutes north of there
at my brother & sister-in-laws place, so all I'm paying is the cost of
the rental car.

>side the few rivers there are here... homeless

>living under bridges and, in generally out of

>the way places... I see the police and sheriff

>constantly "moving these people on", there

>really is just no place for them to go...

Agreed. I've been to the Salton Sea area and it is pretty much a nomad's land with little order and much chaos, but it does have its charm at times. I've seen some sick bikes in that area..home brewed street bikes with knobbys, etc. Plenty of riders around there, though.

>Over the past years I have watched

>ambulances and coroners pick up bodies of

>these people who obviously did not receive

>help or proper medical care...

Yea..interesting how California police officers are also deputy coroners in many areas.

>I have watched welfare reduced, and a large

>theatre restored and a sports arena built with

>the public monies... and the homeless go

>unassisted... I have watched illegal aliens

>taking over the jobs which these Americans

>could once have used to pull themselves up

>and out of the poverty they exist in...

That move to give the illegal aliens driver licenses was a really bad one, I'm glad it as defeated.

>It really is just too much to describe... I feel ill

>when I just describe these conditions I have

>witnessed... I have given in to hopelessness

>for these poor souls--as no one is even

>themselves in, indeed, I almost think I see

>many preferring death to these

>conditions--and they give up...

I was surprised how many vets are living in those conditions, but as you know, many of them function better out there in the sticks alone, but suffer when it comes to things such as medical care.

>I think a certain group of people must enjoy

>watching all of this... they frighten me worse

>even worse...

Yea, I hear ya' and agree wholeheartedly.
BTW, you ever participate in any of the Moose sponsored races, like the long distance enduro runs? I may have a chance to get out to Cal this fall or next fall just for that.

I'm still trying to figure out the difference between learning morse code and not using it and not learning morse code and not using it. How can someone who doesn't learn it and doesn't use it conflict with others in an area dedicated to morse code?

>

Yes, back when there was no store bought gear. Yes, back when you had the challenge and the pleasure of building it and the sense of accomplishment of operating it yourself.

>

Sure, multiple guess questions on computers to operate today's ham gear
makes sense. But to test for CW? I'm still searching for a valid reason
to keep doing so. All I've seen so far is, "why not?" or "to show you're
qualified." Is it solely to limit the number of people who can operate
voice on HF--but people are afraid to say this out loud?

Yes, I was copying code at 35 WPM (about as fast as I could pencil it on
paper) at one time. Right now, I can copy 13 solid. Yes, I could easily
increase it again with just a little bit of practice.

>

Yes, you are aware of some practical strategies in passing a multiple guess
test. This is part of the coaching that occurs for most potential hams
these days.

>
> As to no difference; perhaps not to put it on the air, but to understand

Why only a practical test for CW? Why not a practical test for any of the
digital modes or using a satellite or how to DF a fox or how to set up a
radio?

o the old fuddy duddies say so
o the FCC makes no money from dropping the requirement
o "I had to, so you have to!"
o no good reason whatsoever
o the FCC is busy selling spectrum, so if HF is actually used, they can't sell it
o too busy with killing the HF spectrum with BPL
o too lazy to act because Powell sapped all their inhibition
o no good reason whatsoever (oh, I said that)

Costs go from .$ 0.85 to $1.50 or more depending on if they work SSB, have pre-amp, standby-mode such as that. Make certain that if you are going to break the law by running the linear amplifier on 11Meter that you don't overddrive the amp. I have heard that one should not drive the amp from a radio that is deadkey 4watts - talk 6watts at 100% modulation.

Don't use a roger beep unless talking SSB. They are a pain in the butt. Also talk-backs......I was talked into putting one of those in my Uniden and wish that I had him put a toggle switch on it to kill it when I wished. When I am running full open on mic gain I am louder than a AM/FM station in the bed of my pickup.

Nor running the echo down in the well. I refuse to talk with those people for they drive me to having headaches and othes to pulling their antennas in and not even listening to a given freq.

do you know what a pain in the ass it is going from jfk to penn?
belt parkway to the varranzano bridge through staten island then either
the outer bridge crossing or the goethals bridge. then through jersey.
only saving grace is one can see lower manhattan from the varranzano.
have fun sharkie....

I'll be in Oak Ridge Tenn the week of 4 July with a couple of days free after that. Was thinking of going to the big amusement park up there in Ohio and heading back east. You up to a hook up?

Well, as a matter of course, you get what you pay for. To me $40 is in
the "recreational user" category. For true lab precision quality test
equipment, you're going to pay a lot more (Unless, of course, it's 30+
years old, and then I'd have my doubts about calibration).

I have a Fluke counter, which I obtained about 8 years ago. At the
time I got it, the calibration was about a year old. While the
optional heated crystal oven high precision timebase is fairly stable,
I'm sure there's been some drift in the last 8 or 9 years.

So even if you get a "Lab quality" counter, unless the seller can
provide calibration traceability, you still don't know how accurate it
might be.

Hell, we were glad when we could do that with .1 watt, and a 36"
telescopic. Of course there wasn't as much QRN on the band and those
weak signals could travel farther before being lost in the (lower)
ambient noise.

Human beings (especially males) tend to look at life as a series of
challenges or competitions. Think about sports, NASCAR, etc. There's
an almost irresistible drive to be the best you can be at something,
or at least better than the next guy. On CB, that sense of competition
is what drives people to run gobs of excessive power. It's not that
they actually expect to talk consistently over 200 miles. They just
want to be the only one heard in a 10 mile radius when they key up.
The big dog as it were. Being a "Mud Duck" is akin to being a physical
wimp.

Not really. Most people who are in full time gainfully employed jobs
have some form of health care coverage. Unless you're a part time
worker, chances are you have some coverage.

>A growing trend
>has been major employers hiring at 32 hours or less to avoid offering

There are laws to discourage this practice. Just as there are laws to
prevent an employer from paying you a "Salary" instead of an hourly
rate to avoid paying overtime. Look into the federal wage and hour
laws.

No one said that life would always be easy. Try growing up during the
great depression in the 30's as my parents did, and then tell me what
hardship is. When I was a kid, all I would hear were stories of how
people did "this and that" to get by. You've probably heard the
stereotypical stories of people walking to school with ratty shoes

full of holes in the snow. Except that these were true. I guess my perspective is a bit different than yours. To me, the examples you've given are a speed bump compared to life during the depression.

>
>
>Recovered from what? You said it couldn't happen, but by invoking the
>fact they recovered, you unwittingly admit the towns were indeed
>crippled from such layoffs..

Only temporarily. That's the whole point. Life goes on. People adapt and adjust. Allow them to do that, give them a few tools to help them, and they will solve their own problem. We don't need the government mollycoddling us and indoctrinating us into becoming dependant on them.

My original point was also that having diverse industries in your locale helps to prevent crippling a town if one of those industries goes belly-up. The others still go on, and the impact is much less than a town which grew up around one very large plant.

>In many of those
>industry towns, this led to the closing of the
>mills and a significant layoff of those town's
>populations and many of those towns became ghettos or ghost towns
>because of that.
>

>
>
>Blacksmiths were never a large industry and the position was never one
>of those that most in a city were employed, rendering the example
>fruitless and non-related.

It's very much related. A particular vocation doesn't have to be large
to be relevant. The blacksmith example highlight quite accurately what
happens when our society evolves and old skills and crafts are no
longer needed. At the same time newer skills open up as a result of
advancing technology. People need to keep up with the trends so that
the skills they posses are not obsolete.

>>That's one of the reasons why I still live where

>>.paying skilled jobs.
>

>When was the last time you checked the
>stats? Florida has led the country in adding new jobs and has not felt
>the inflation the country has felt the last so many years. The pay here
>was always offset by the lower cost of living.

All that sounds fine and all, but the long and short of it is that for the field that I am in, the salaries offered were between 20 and 40% lower than they are here. The employers there (And I interviewed with quite a few) once they find out where you're from, tell you right up front not to expect a comparable salary.

>
>>That's a myth.
>
>
>Ok,,in the same manner you claimed one who lived in another state could
>not tell you about Pa, what makes you feel you can tell a lifelong
>resident of another state about their state?

Because I did some extensive research into it when I was considering the move there 15 years ago. I walked into a K-Mart and compared prices of the things that I normally buy with what I pay up here. My wife was especially knowledgable about clothing prices.

>It;s not a myth, Dave. There is no state income tax and prices have
>always been lower in Fl,,until recently (last 10 years).

Slightly lower in specific cases, like locally produced goods like fruit and other food.

>> Yes, there are certain costs which are lower
>>in Florida. The homestead exemption saves a
>>bundle on property tax. Homes are (were)
>>cheaper. There is no state tax, and utilities are
>>somewhat lower.
>
>
>
>Utilites are higher, especially electric, as the majority of homes do
>not have gas.

Actually, when I was checking, I was currently paying 15 cents per kilowatt hour. In Florida (In Brevard County), the rate was about 8 cents per kilowatt hour. Water rates varied depending on whether you had "city" water or a privately owned "utility", but they were cheaper by and large than what I paid up here.

Heat was not an issue as most homes used efficient heat pumps, which spent most of their times as air conditioners. With insulation ratings of R34 in most new homes, the cooling costs offset the normal eastern PA winter heating cost by a considerable margin.

>Gas was only recently introduced as a choice for heating
>and cooking, and even in most cities, it has to be trucked in (propane).

I prefer electric for cooking (When I'm not grilling). And heating in
Florida is not normally an issue, as you know. A couple of logs on the
fireplace will take the chill off on those few chilly mornings.

>> Yes, many costs ARE lower to an extent. But
>>if you try to buy something like a car, gasoline,
>>or a major appliance or consumer good, the
>>cost is pretty mush the same as it is in any
>>other state.
>
>
>
>Again,,nope. Auto costs are not only in better condition (speaking of
>used, of course) but new cars are somehwta cheaper here, so are most
>manufactured goods.

Not according to what I found. I didn't bother with used car pricing
because there is a certain amount of subjective perception. But the
MSRP of new cars there was the same (or very close) as what I see up
here. Sure, no one pays MSRP, but the degree of discount is not going
to be any more significant there than here.

Gasoline was actually more expensive back then than up here. What do
you pay for gas now? Last week, I paid $1.94/gallon

> The exceptions are the tourist areas and coastal
>regions that are developed. I can get a gallon of milk for 3 bucks here.
>I can get a gallon of milk in Chiefland for 2.29. this is the norm, not
>the exception.

I can do the same up here. Orange Juice is $2.00 a half gallon (for
the "Not from concentrate" stuff). That's something I would expect to
be much cheaper in Florida.

>> And at 30-40% less of a salary, for
>>the same job, that limits one's buying power.

>Yep,,salaries for workers who work for another have always been low
>compared to the northern states.

Exactly my point. Which limits my buying power.

>The only people that have
>trouble adjusting are those who live beyond their means.

>>Living beyond one's means is somewhat
>>subjective. It depends on where you are living
>>and what your earning power is.

>Your salary has nothing to do with one living beyond their means.

Sure it does. You salary determines what "your means" is.

> One
>can make 200 bucks a week and live beyond their means, just as one who
>makes 2000 bucks a week can live beyond their means. It is also not
>linked to geography or earning power.

When one budgets carefully and lives a certain standard of living in
one area and "lives within his means", suddenly up roots and moves
somewhere else, and his salary decreases, he is now living beyond his
means assuming the bills stay relatively the same. Cuts in spending
involve changing your standard of living. Someone used to driving a
BMW might now have to deal with a Chevy. It might not be their idea of
"living".

>ï¿½People like you

>>Yes, Yes, and YES. I'm totally cool with
>>hardship TEMPORARY assistance.

>Many folks would benefit and live healthier and longer if they were
>permitted even temporary medical assistance from the government,,,so are
>you for it or against it?

No. Not as long as nothing is done to address the supply side of the
equation. There are many problems in the medical field. Fraud is

rampant, lawsuits are commonplace, everyone looks to wring big bucks
out of the medical industry. Until there is meaningful tort reform,
lessening of malpractice insurance, and someone steps in to run
roughshod over billing practices, I don't want one more penny pumped
into this industry only to encourage it to grow even further in costs.

>ï¿½ï¿½Now please 'splain how being self-sufficient and personally

>regulated by the federal government.
>
>>The insurance companies are obligated to
>>make good on their claims.
>
>
>But they AREN'T making good on their claims, Dave, and this is the
>problem.

Well, if they aren't because they can't, that's one thing. You can't
get blood from a rock. If they're just dragging their feet, the
government should step in and push on behalf of the residents.

>>And they should be made to repay the
>>.government for any "handouts" it had to pay
>>to house people until the insurance companies
>>settled.

>The government disagrees, this why FEMA was created.

FEMA provides assistance to people displaced due to natural disasters.

>>.Which they should.
>
>
>But they AREN'T doing it, and the government is STILL permitting these
>companies do write more policies.

So you advocate that the government control aspects of business?
That's socialism. Besides, if the insurance companies don't write more
policies, where are they going to get the money they need to pay the
claims (Other than by raising MY rates for no good reason)?

>To suggest these
>fine families are anything less than responsible or self-sufficient
>shows you haven't a clue, Dave.
>
>>I never said anything of the sort. I'm not talking
>>about temporarily displaced people. I'm talking

>

>Does being displaced for a year eqaute your idea of temporary?

Yes.

>On the contrary, I will lay odds these
>folks are illustrating survival skills and grit that you couldn't
>handle.
>
>>Based on what?
>
>Based on your invoked claims of your material possessions.

Which means what exactly? I grew up in a struggling middle class family. My parents were both penny pinchers, and I learned it from them. I'm not rich by any standard, but I pick and choose what things I spend my money on. I prefer to spend money on a few big things rather than on a bunch of smaller ones.

>Many of these folks have been living out of doors, literally, for almost
>a year and cooking on fires or grills.
>
>>I do that for fun.
>
>Try this for a year, when all of your equipment enabling you to partake
>in this "fun" has been destroyed, then you -may- be qualified to speak
>of what these people should and shouldn't do.

The thing is, if I had a member of my family who was displaced from their home in Florida, I would take a week or two off of work, hook up the trailer to my truck, load up the generator and drive down. I would let them live in the trailer until their home was rebuilt. THAT is what I meant before by leaning on and getting support from family. I can't believe all those people who lost homes don't have relatives they can live with, or who can help them in some way. My in-laws had a fire in 1987. Their home was unlivable for almost a year, while waiting for insurance claims to settle. I invited them to live with my wife and I for the time period. It was tight, but that's what you do for family.

>Among a boatload of reasons you ignore...abuse, peer pressure,

>drinks alcohol, even if it's the cocktail with dinner.

Not an issue. Peer pressure is something you have to deal with. I took a lot of peer pressure abuse when I was a kid. You learn to ignore and deal with it. You learn that those people are not worth your time, and when it's all said and done, they'll be serving you fries 20 years from now.

>>Provide them with many sorts of creative
>>avenues to release, and there will be no need

>>has a worthwhile hobby, will be way too busy
>>to hang out with the slackers.
>
>
>Your mistake is believing drug use by children is inherent to these you
>call "slackers".

Drug use is done mainly as an escape by those who can't handle life.
Mostly this is a result of isolating parents who protected their kids
for too long, and who now have to deal with the ugliness of the real
world. They have self-esteem and social issues. But in their minds
they are perfectly ok, and they try to get other kids to partake as
well, to further bolster the illusion of normalcy that dopers tend to
believe.

Being an alert and supportive parent who can intercede when your kid
starts to have "problems" before they turn to drugs. That's why it's
also important to know their friends.

>> Giving a kid an activity that they can be proud
>>to excel at and bolster their self esteem (While
>>learning what it means to truly EARN it) builds
>>character.
>
>
>Yup,,character that is torn down when these suburban kids from loving
>families begin using harmful drugs.

If the character is strong, and you believe enough in yourself, you
can just say no. I never did drugs in school. For one thing I never
smoked at all, and the smell of smoke bothered me. Other drugs seemed
silly to me. To me, they were pointless. Plus I never had enough
money to buy them anyway. I spent all my cash on CB radio stuff. I
guess you could say CB was my "drug".

Keep your kids poor! And for God's sake, don't give them a credit
card.

>> Lastly, never lose communication with them.
>>Set your ground rules while they are young,
>>and they become adjusted to them. Let a child
>>run amuck when they are young, and then try
>>to reign them in when they hit the teenaged

>>parents).
>> Make sure they know that you're
>>always there for them. Support them in
>>whatever they do. Show up at their plays,
>>cheer them on at their games. Listen to their
>>teachers when you have conferences. Trust
>>them enough and allow them to make small
>>mistakes, but keep on the lookout for major
>>ones. In short, STAY INVOLVED!

>All that is great advice, but is irrelevant in the real world.

It is great advice, and it is very relevant in the real world. Not every kid is a weak, spineless bowl of self esteem goo, that can be shattered by the taunting of some lowlife idiot. If you build their confidence and show them their potential, they will know enough to laugh at the pathetic attempts by the slackers who use peer pressure to elevate their own pitiful self-esteem at the expense of others.

There are two types of people in the world. Those who excel, and the ones that those who excel laugh at. I used to laugh a lot when I was in school. I still do.

>>I know how my parents raised me. I know from
>>a child's perspective which disciplines worked,
>>and which ones didn't.
>> I use what I learned to my advantage as a
>>parent.

>You ignore the fact that peer pressure is greater today than you can
>comprehend

No it's not. It's the same old story done for the same reasons. People elevate themselves by trying to make other people feel lousy. Once you understand the psychological forces that drives this, you can defuse them.

>....your advice has been followed time and time again, yet
>there are great kids who succumb to drugs every day.

Then that advice was not followed completely.

>rates were at all time lows instead of paying off their debts.

From an investment perspective, it's not such a bad idea. Many
financial planners will tell you than it's better to carry some debt,
and borrow money to invest, rather than tying up your own. It seems
like reverse logic, but as long as you are earning a greater return
than the interest rate you are borrowing, it makes sense.

About once a month, there would be those rumors of "Uncle Charlie" or the "Candyman" as the FCC was known as back then, coming to town. It was always a third hand account of someone's brother's cousin's friend getting busted. But no one even knew the person directly. But just to be safe, everyone stashed their amps, kept off the "extras", and toned it down a notch or two.

Even during the coffee breaks the rumor mongers told of the FCC raiding the coffee breaks looking for illegal stuff, and writing down license plate numbers. No one ever saw them doing it though. I guess some people just liked spoiling other people's fun.......

I used to do calibrations, years ago on research instruments that was traceable
to NIST, and NBS before that. At that time, traceability was at least $100 per
piece. I don't see how it would be cost effective to get a counter with this
traceability that could easily run you twice the cost of a new radio.

Galaxy freq counters should not be called "frequency counters" and
should be referred to as what they truly are,,,,, more of a freq
"display" than true counter.

David T. Hall (N3CVJ) wrote:
The number of
those without health care (seniors included) far outnumber those healthy
workers who get laid off.

>Most companies who employ skilled workers,

>have some form of healthcare coverage as

>part of their benefits package. I've never had a
>job without it.

Your personal situation is irrelevant to the majority.

>Not really. Most people who are in full time

>gainfully employed jobs have some form of

>health care coverage. Unless you're a part

>time worker, chances are you have some

>coverage.

Each year (for the last 4 years) the number of part-time workers has
increased as the number of those laid off has increased.
A growing trend
has been major employers hiring at 32 hours or less to avoid offering
health care benefits.

>There are laws to discourage this practice.

Bullshit. Any company can fill their positions with ft or pt employees.
There is no law that claims copanies must offer ft work.

> Just as there are laws to prevent an employer
>from paying you a "Salary" instead of an

>hourly rate to avoid paying overtime. Look into

> the federal wage and hour laws.

I have to abide by the laws you speak of but it seems you are not
familiar with them. Another easy way to avoid offering benefits is to
hire people as independent cotractors, from laborers to clerical..this
is very common in Fl. It also negates the need for federal withholding,

placing the burden on the worker with a 10-99.

> Resumption of healthcare coverage is tied to

>.the laid-off worker's need to find another job.

So what happens in between when on needs prescription medication? When one is laid off from their job and offered the mandated COBRA, the cost is always greater than the original. Now, you have people who can not only pay their bills, but can't afford their medical covereage. What is your solution?

>No one said that life would always be easy.

If you don't have a solution, say so, but saying resumption of healthcare is tied to finding another job goes without say. Problem is, the jobs do not exist..check your stats from the feds. Last month, the feds fell short of 100,000 jobs they expected to add to the stats of added jobs for the month.

> Try growing up during the great depression in

>the 30's as my parents did, and then tell me

>what hardship is.

How are your parents any different from any other of our parents who did the same thing?

> When I was a kid, all I would hear were

>stories of how people did "this and that" to get

>by. You've probably heard the stereotypical

>stories of people walking to school with ratty

>shoes full of holes in the snow.

Uphill,,,both ways.

>Except that these were true. I guess my

>perspective is a bit different than yours. To

>me, the examples you've given are a speed

>bump compared to life during the depression.

Except you weren't there and did not experience anything remotely associated with such a hardship as that.

>That way, no one layoff can cripple a

>significant portion of the population.

Depends what you consider a significant portion of the population. I can think of several examples..Reagan importing cheaper metals from the Asians decimated the steel industry in Pa and Ohio.

>I live within an easy drive of 4 different steel

>plants. The towns that surrounded them were

>dependant on those mills for the majority of

>their income.

Not one of those small towns you mentioned were major steel producing towns. In fact, those towns are obscure to all but those who live near them, except for Allentown, and that was made famous by Billy Joel.

>But 20 years later and things

>have pretty much recovered. People can get

>pretty creative when they need to be.

Recovered from what? You said it couldn't happen, but by invoking the fact they recovered, you unwittingly admit the towns were indeed crippled from such layoffs..

>Only temporarily.

It happened. An entire generation came of age and went during that "temporary" era you refer.

>That's the whole point. Life goes on. People

>adapt and adjust. Allow them to do that, give

>them a few tools to help them, and they will

>solve their own problem.

Except many cities did not recover.

>We don't need the government mollycoddling

>us and indoctrinating us into becoming

>dependant on them.

Asking for health care from those who are charged with regulating it when they have the best care available and toss our cash away like pissing in the wind and give away health care to the very same people you say are trying to kill us and wage war and terror on us, is not mollycoddling. Kind of difficult to explain your position when you suport these leaders who "mollycoddle" with healthcare those you repeatedly insist are our enemy and hate us and want us dead.

>My original point was also that having diverse

>industries in your locale helps to prevent

>crippling a town if one of those industries goes
>belly-up. The others still go on, and the impact
>is much less than a town which grew up

>around one very large plant.

In many of those
industry towns, this led to the closing of the mills and a significant
layoff of those town's populations and many of those towns became
ghettos or ghost towns because of that.

>Not in my area. The towns (Allentown,

>Phoenixville, Fairless Hills, and

>Conshohocken) are still going strong, although
>the people who live there are forced to

>commute to work now.

>The towns are going through a revitalization,

>where the old factories have been leveled and
>in their place have sprung up huge business

>campuses.

Those towns were never considered large steel towns or large steel
industy towns.

>Tell that to the thousands of people (And Billy

>Joel) who lived and worked there and were

>laid off when the mills closed.

They were small, tiny mills compared to the larger cities and employed a
fractio of the workers.
 Think Pittsburgh and similar cities in Ohio.
Same can be said with coal
mining and to a certain extent, the auto industry. History repeats
itself.

>Yes, as we continue to become more efficient

>at manufacture,

Whaaaa? Manufacturing is DOWN, not becoming more efficient.

>Down in this country. It's growing strong in

>other places where it is cheaper (Hence more

>efficient) to manufacture things.

Yea, but that isn't "we". "We" is,,,,er,,,are the USA!

> the nature of jobs have evolved along with it.

>The automobile pretty much ended the

>demand for blacksmiths.

> But we shouldn't

>blame the automobile for causing the demise

>of the blacksmith industry. The smart

>blacksmith went back to school and learned to
>repair cars.

Blacksmiths were never a large industry and the position was never one
of those that most in a city were employed, rendering the example
fruitless and non-related.

>It's very much related. A particular vocation

>doesn't have to be large to be relevant.

It does to be compared to an entire industry such as the steel industry
of which we were speaking.

>The

>blacksmith example highlight quite accurately

>what happens when our society evolves and

>old skills and crafts are no longer needed.

The loss of blacksmith jobs never crippled any towns or cities and that
was what we were speaking.

>At the same time newer skills open up as a

>result of advancing technology. People need

>to keep up with the trends so that the skills

>they posses are not obsolete.

>That's one of the reasons why I still live where

>I do. I was once contemplating a move to both
>Florida and North Carolina. But the lack of

>.diverse skilled jobs and much lower pay

>scales pretty much nixed that move.

Lack of diverse skilled jobs?

>Excuse me, I should have said diverse high

>.paying skilled jobs.

When was the last time you checked the
stats? Florida has led the country in adding new jobs and has not felt
the inflation the country has felt the last so many years. The pay here
was always offset by the lower cost of living.

>All that sounds fine and all, but the long and

>short of it is that for the field that I am in, the

>salaries offered were between 20 and 40%

>lower than they are here. The employers there
>(And I interviewed with quite a few) once they

>find out where you're from, tell you right up

>front not to expect a comparable salary.

>That's a myth.

Ok,,in the same manner you claimed one who lived in another state could
not tell you about Pa, what makes you feel you can tell a lifelong
resident of another state about their state?

>Because I did some extensive research

So did Shark on your laws, but you stil claimed because one lived
somewhere else, they cold not know the particulars as well as one who
resided there.

>when I was considering the move there 15

>years ago.

15 years ago was another era in Fl.

>I walked into a K-Mart and compared prices of
>the things that I normally buy with what I pay

>up here. My wife was especially knowledgable
>about clothing prices.

It's not a myth, Dave. There is no state income tax and prices have
always been lower in Fl,,until recently (last 10 years).

>Slightly lower in specific cases, like locally

>produced goods like fruit and other food.

> Yes, there are certain costs which are lower

>in Florida. The homestead exemption saves a

>bundle on property tax. Homes are (were)

>cheaper. There is no state tax, and utilities are
>somewhat lower.

Utilites are higher, especially electric, as the majority of homes do
not have gas.

>Actually, when I was checking, I was currently

>paying 15 cents per kilowatt hour. In Florida

>(In Brevard County), the rate was about 8

>cents per kilowatt hour. Water rates varied

>depending on whether you had "city" water or

>a privately owned "utility", but they were

>cheaper by and large than what I paid up

>here.

What do you refer to as a privately owned utility? You either have city,
county, or well water. I have city -and- a well.

>Heat was not an issue as most homes used

>efficient heat pumps, which spent most of their
>times as air conditioners. With insulation

>ratings of R34 in most new homes, the cooling
>costs offset the normal eastern PA winter

>heating cost by a considerable margin.

Gas was only recently introduced as a choice for heating and cooking,
and even in most cities, it has to be trucked in (propane).

>I prefer electric for cooking (When I'm not

>grilling).

Not me. I hate it, but until we get gas lines, I'm not paying for
propane.

> And heating in Florida is not normally an

>issue, as you know. A couple of logs on the

>fireplace will take the chill off on those few

>chilly mornings.

Depends where you live. The top of the state, even from Ocala northward
use their heat all winter every winter. 30's is a bit chilly and a
fireplace can't heat the entire house.

> Yes, many costs ARE lower to an extent. But

>if you try to buy something like a car, gasoline,
>or a major appliance or consumer good, the

>cost is pretty mush the same as it is in any

>other state.

Again,,nope. Autos are not only in better condition (speaking of used, of course) but new cars are somewhat cheaper here, so are most manufactured goods.

>Not according to what I found. I didn't bother

>with used car pricing because there is a

>certain amount of subjective perception.

(shrug) I go by NADA or edmunds.com perceptions, as does the auto industry. Check resale and trade-in values.

>But the MSRP of new cars there was the

>same (or very close) as what I see up here.

>Sure, no one pays MSRP, but the degree of

>discount is not going to be any more

>significant there than here.

>Gasoline was actually more expensive back

>then than up here. What do you pay for gas

>now? Last week, I paid $1.94/gallon

Last week I paid 1.94 also. This week it's 2.03 but I haven't checked gasbuddy.com in a few weeks.
-
 The exceptions are the tourist areas and coastal regions that are developed. I can get a gallon of milk for 3 bucks here. I can get a gallon of milk in Chiefland for 2.29. this is the norm, not the exception.

>I can do the same up here. Orange Juice is

>$2.00 a half gallon (for the "Not from

>concentrate" stuff). That's something I would

>expect to be much cheaper in Florida.

Dave Hall Jr.(N3CVJ) wrote:
>And at 30-40% less of a salary, for

>the same job, that limits one's buying power.

Yep,,salaries for workers who work for another have always been low
compared to the northern states.

>Exactly my point. Which limits my buying

>power.

The only people that have
trouble adjusting are those who live beyond their means.

>Living beyond one's means is somewhat

>subjective. It depends on where you are living

>and what your earning power is.

Your salary has nothing to do with one living beyond their means.

>Sure it does. You salary determines what

>"your means" is.

One
can make 200 bucks a week and live beyond their means, just as one who
makes 2000 bucks a week can live beyond their means. It is also not
linked to geography or earning power.

>When one budgets carefully and lives a

>certain standard of living in one area and

>"lives within his means", suddenly up roots

>and moves somewhere else, and his salary

>decreases, he is now living beyond his means

>assuming the bills stay relatively the same.

Demonstrating anyone can live beyond their means.

>Cuts in spending involve changing your

>standard of living. Someone used to driving a

>BMW might now have to deal with a Chevy. It

>might not be their idea of "living".

What about this job retraining you speak of?
Who pays for it?

>We do. That's one area of assistance that I'm

>very much in favor of. Training enables people
>to become self-sufficient.

Yet, government medical care enables people to live and be healthy, yet,
you are against that.
>Because it is a widening blacke hole

Sure,,when the US in covering Iraqi medical care for the asking.

> As long as there are no attempts to cap

>medical costs they will keep spiraling, no

>matter how much the government kicks in on

>our behalf.

Yet, you speak out against our own people getting such care, but you
have said nothing concerning the current admin's waste of medical care
and supplying the Iraqi's with it, or any other of the "enemies' on our
list

>That's what self sufficiency and personal

>responsibility are all about.

One can not be self sufficient if one is sick and ailing.

>People got sick in the 1930's too.

Try to stay relevant, Dave, and not slip into your preference of
discussing ancient history that will not change anything.

> And you know what? They went to work

>anyway, or there might not be any food on the

>table that night.

Advocating people to go to work sick in today's climate is a very
irresonsible thing to do, Dave. Even the CDC and the WHO tell people to
stay home. In fact, many employers, such as hospitals have policies
against coming to work ill.

_
Looking to the government for assistance is perfectly acceptable in many
instances, Dave. There are thousands and thousands and thousands of
people STILL homeless in Fl because of the hurricanes.

>Yes, Yes, and YES. I'm totally cool with

>hardship TEMPORARY assistance.

Many folks would benefit and live healthier and longer if they were permitted even temporary medical assistance from the government,,,so are you for it or against it?

>No. Not as long as nothing is done to address

>the supply side of the equation. There are

>many problems in the medical field.

And those who lost everything and are in need of medical assistance were not responsibe for any of them.

>Fraud is

>rampant, lawsuits are commonplace,

>everyone looks to wring big bucks out of the

>medical industry. Until there is meaningful tort

>reform, lessening of malpractice insurance,

>and someone steps in to run roughshod over

>billing practices, I don't want one more penny

>pumped into this industry only to encourage it

>to grow even further in costs.

It's not a oney shortage problem, like you assume, it's a budget issue of where and how the monies are spent. Instead of spending health care on the enemy overseas, there are many children in this country who could benefit from the care El Mohammed Mujasteen receives and which you condone.

-
 Now please 'splain how being self-sufficient and personally responsible can help these folks who paid their premiums on time faithfully all those years, had their homes destroyed or damaged to the point they are rendered unsafe for living conditions, lost all their possessions, yet still manage to survive by living in tents, can bring them up out of their hell created by the insurance companies who are regulated by the federal government.

>The insurance companies are obligated to

>make good on their claims.

But they AREN'T making good on their claims, Dave, and this is the problem.

>Well, if they aren't because they can't, that's

>one thing.

If they can't, the fault lies with your government because they are the ones that regulate the premiums and the industry.

> You can't get blood from a rock. If

>they're just dragging their feet, the government
>should step in and push on behalf of the

>residents.

>And they should be made to repay the

>.government for any "handouts" it had to pay

>to house people until the insurance companies
>settled.

The government disagrees, this is why FEMA was created.

>FEMA provides assistance to people

>displaced due to natural disasters.

Hurricanes -are- natural disasters, Dave. You perhaps thought otherwise?

>.Which they should.

But they AREN'T doing it, and the government is STILL permitting these companies do write more policies.

>So you advocate that the government control

>aspects of business?

>That's socialism.

Better read up on who the insurance industry answers to, Dave. The feds regulate everything to do with them.

>Besides, if the insurance companies don't

>write more policies, where are they going to

>get the money they need to pay the claims

>(Other than by raising MY rates for no good

reason)?

From their catastrophic relief fund, a fund specifically created in order to prevent such problems.
To suggest these
fine families are anything less than responsible or self-sufficient shows you haven't a clue, Dave.

>I never said anything of the sort. I'm not talking
>about temporarily displaced people. I'm talking

>about perpetual slackers.

Those displaced by the hurricanes need aid and they are not slackers.
Does being displaced for a year equate your idea of temporary?

>Yes.

On the contrary, I will lay odds these
folks are illustrating survival skills and grit that you couldn't
handle.

>Based on what?

Based on your invoked claims of your material possessions.

>Which means what exactly? I grew up in a

>struggling middle class family. My parents

>were both penny pinchers, and I learned it

>from them. I'm not rich by any standard, but I

>pick and choose what things I spend my

>money on. I prefer to spend money on a few

>big things rather than on a bunch of smaller

>ones.

Many of these folks have been living out of doors, literally, for almost
a year and cooking on fires or grills.

>.I do that for fun.

Try this for a year, when all of your equipment enabling you to partake
in this "fun" has been destroyed, then you -may- be qualified to speak
of what these people should and shouldn't do.

>The thing is, if I had a member of my family

>who was displaced from their home in Florida,

>I would take a week or two off of work, hook

>up the trailer to my truck, load up the

>generator and drive down. I would let them

>live in the trailer until their home was rebuilt.

Again, not everyone has families that can help, Dave. If it were that
simple, there would be no displaced families there now,,,and there are
thousands and thousands.

>THAT is what I meant before by leaning on

>and getting support from family. I can't believe

>all those people who lost homes don't have

>relatives they can live with, or who can help

>them in some way.

Yea..they all choose to live without roofs and appliances and choose to cook outdoors because of their pioneering spirit.

> My in-laws had a fire in 1987. Their home

>was unlivable for almost a year, while waiting

>for insurance claims to settle. I invited them to

>live with my wife and I for the time period. It

>was tight, but that's what you do for family.

Ummm,,,actually, i would have rented them their own place.

-
Among a boatload of reasons you ignore...abuse, peer pressure, self-esteem, curiosity, lies told to them by those who buy into the government's bullshit war on drugs...etc. It's hypocritical of us to tell the kids to just say no when we ply them with ritalin from a young age and mom smokes cigarettes, drinks cup after cup of coffee, and dad drinks alcohol, even if it's the cocktail with dinner.

>Not an issue. Peer pressure is something you

>have to deal with.

And something whcih parents have no control to what their children are exposed in public schools.

> I took a lot of peer pressure abuse when I

>was a kid.

Dave, multiply that times your highest faction you can handle and then you amy come close to understanding the level of peer pressure today.

> You learn to ignore and deal with it. You learn
>that those people are not worth your time, and
>when it's all said and done, they'll be serving

>you fries 20 years from now.

You know better than to try and tell a child what it will be like in 20 years. 20 weeks is an eternity to kid. 20 years is inconceivable.

>Provide them with many sorts of creative

>avenues to release, and there will be no need

>to turn to destructive behavior.

Again,,,bullshit.

>Not at all.

Perhaps just youare just naive, then.

>A kid who plays sports, acts in drama clubs,

>plays in the band, participates in the arts, or

>has a worthwhile hobby, will be way too busy

>to hang out with the slackers.

Your mistake is believing drug use by children is inherent to these you call "slackers".

>Drug use is done mainly as an escape by

>those who can't handle life.

Then the same can be said for alcohol and obacco users.

>Mostly this is a result of isolating parents who

>protected their kids for too long, and who now

>have to deal with the ugliness of the real

>world. They have self-esteem and social

>issues. But in their minds they are perfectly

>ok, and they try to get other kids to partake as

>well, to further bolster the illusion of normalcy

>that dopers tend to believe.

Same can be said for those who drink, then.

>Being an alert and supportive parent who can

>intercede when your kid starts to have

>"problems" before they turn to drugs.

Drugs are not the problem Dave, they are a symptom.

>That's why it's also important to know their

>friends.

> Giving a kid an activity that they can be

>proud to excel at and bolster their self esteem

>(While learning what it means to truly EARN it)
>builds character.

Yup,,character that is torn down when these suburban kids from loving families begin using harmful drugs.

>If the character is strong, and you believe

>enough in yourself, you can just say no. I

>never did drugs in school. For one thing I

>never smoked at all, and the smell of smoke

>bothered me. Other drugs seemed silly to me.

>To me, they were pointless. Plus I never had

>enough money to buy them anyway. I spent all
>my cash on CB radio stuff. I guess you could

>say CB was my "drug".

>Keep your kids poor! And for God's sake, don't
>give them a credit card.

Keep your kids poor? That's the most ridiculous thing I ever heard. On one hand, you claim that if you act one way with your kids, they will avoid drugs and other pitfalls you mistakenly only attribute to "slackers", yet you believe giving them a credic card or a pocket full of cash will destroy the values you instill in your kids.
Oh man, just you wait. You are in for the shock and heartbreak of your life like you can never imagine.

> Lastly, never lose communication with them.

>Set your ground rules while they are young,

>and they become adjusted to them. Let a child
>run amuck when they are young, and then try

>to reign them in when they hit the teenaged

>years, and you've already lost.

I don't equate not keeping my children "poor" (as you do) with permitting them to "run amuck".

> Talk to them always. Know all their friends

>(and their parents).

> Make sure they know that you're

>always there for them. Support them in

>whatever they do. Show up at their plays,

>cheer them on at their games. Listen to their

>teachers when you have conferences. Trust

>them enough and allow them to make small

>mistakes, but keep on the lookout for major

>ones. In short, STAY INVOLVED!

All that is great advice, but is irrelevant in the real world.

>It is great advice, and it is very relevant in the

>real world. Not every kid is a weak, spineless

>bowl of self esteem goo, that can be shattered
>.by the taunting of some lowlife idiot.

Who said otherwise? Those are your mistaken core beliefs.

>If you build their confidence and show them

>their potential, they will know enough to laugh

>.at the pathetic attempts by the slackers who

>use peer pressure to elevate their own pitiful

>self-esteem at the expense of others.

>There are two types of people in the world.

No Dave, despite your best attempts at pigeonholing people into neat
little groups of twos, it's not true.

>Those who excel, and the ones that those who
>excel laugh at.

Again, despite your mistaken core beliefs, most successful people do not
laigh at those less fortunate than themselves. It's also not a very
christian thing to do, let alone something a parent should be teaching
their child.

> I used to laugh a lot when I

>was in school. I still do.

>I know how my parents raised me. I know from
>a child's perspective which disciplines worked,
>and which ones didn't.

You know what works with -you-. You have no clue what works in other
families, religions, faiths, cultures, cities, etc. Your myopic view
that everyone shares your beliefs has never been more wrong, as the
majority of good caring, parents would never laugh at the misfortune or
expense of other's, regardless the situation.

> I use what I learned to my advantage as a

>parent.

As far as learning as a parent, you are in the infancy stage.

You ignore the fact that peer pressure is greater today than you can
comprehend

>No it's not. It's the same old story done for the

>same reasons.

Yea, ok. How many people were killed for their sneakers or clothes when you were a kid, Dave?

>People elevate themselves by trying to make

>other people feel lousy.

Like laughing at those less fortunate than you, yes, I see your point, but you are extremely hypocritical.

>Once you understand

>the psychological forces that drives this, you

>can defuse them.

Uh-huh.

..your advice has been followed time and time again, yet there are great kids who succumb to drugs every day.

>Then that advice was not followed completely.
Once you understand there is no guarantee in parenting, you will understand.

>Dave

>"Sandbagger"

Wonderful! I guess that means the government won't be subsidizing any
more farmers to grow crops that will just end up rotting in waste
heaps, which should be -good- news to Republicans since they don't
like spending money on government handouts. By golly, farming could
finally go back to a free-market economy!

> Also fertilizers used for corn, could cause a local
>runoff problem in nearby waterways (as a boater I am conscious of

>the eco-system of that waterway.

I don't suppose you've ever heard of crop rotation..... doubtful,
since you haven't heard of anything else related to the subject. Ok,
the lesson for today is "Peas: Organic Nitrogen Replenishment". And
yes, peas can be fermented for ethanol just like any other veggie high
in carbs. And if you are worried about polluting the ponds and lakes,
don't you think it's time to switch to a fuel that doesn't dump acids
and carcinogens into the air where they are washed out by rain which
runs into rivers and streams that feed those ponds and lakes?

>>FYI, gasoline was originally just a worthless byproduct of refining
>>kerosene from crude oil.
>
>I see you've been doing a little crash internet researching. (What

Actually, it's almost a direct quote from a 1941 college chemistry
textbook. Looks like the author of the internet site has been doing
some reading at the library. Do you think the info on the internet
comes out of thin air? Well, in some cases it does, such as your
preposterous political propoganda. In other cases it comes from info
available at the library or learned at an institution of higher
education (which explains why you have such a hard time understanding
more advanced concepts). Try a library, Dave. Don't worry, the
librarians won't bite your head off for being ignorant -- they are
there to -help- developmentally disabled people such as yourself.

>Here's some more:
>http://www.ethanol-gec.org/corn_eth.htm

Interesting report. Now if you had actually read it you wouldn't have
bothered typing some of the rubbish you used earlier in your post and
in your previous post.

>It would seem that there have been some improvements in the efficiency
>in the production of alcohol in the last 10 years or so. But there are

>>fertilizer (and sometimes used as hog chow). Ethanol burns cooler so
>>there are no NO emissions
>
>Wrong. There are "less" of some emissions, like hydrocarbons, but
>there are still some VOC's and other byproducts.

NO = Nitric Oxide, a product of air combustion at high temperatures.
And ethanol only has two carbon atoms -- so if the engine is running
rich, the only emissions you could get are a little C-water (CH2O, aka
Formaldehyde) and/or Formic acid, but those are catalyzed into CO2 and
H2O -much- easier than hydrocarbon emissions from gasoline. So do you
want to challenge me on chemistry too, Dave?

>> (thereby reducing ozone pollution), there
>>are almost no hydrocarbon emissions,
>
>Wait, you just said above that there are NO emissions. Make up your
>mind Frank.

I said there are no NO emissions. If you had known anything about the
subject before your recent crash-course on the internet you would have
known that what I wrote wasn't a typo.

>> no need for lead or other
>>additives, no cyclic carcinogens, and the fuel burns more efficiently
>>than gasoline. Ethanol is clean at both ends. Get educated, Dave.
>

>considered to be air toxics. Air toxics are known cancer-causing
>chemicals. Alcohol-fueled vehicles usually produce more air toxics
>than any other vehicle fuel."

Wrong. Your source implies that benzene and other cyclic hydrocarbons
are products of alcohol combustion, which is simply not possible.
Those emissions are common to gasoline and -especially- diesel, but
not ethanol. As I said before, emissions from incomplete ethanol
combustion are easily catalyzed -- just like the catalytic converter
that's already in your car but much smaller and much more efficient.
And your quote makes no mention of the quantities of emissions which,
from an ethanol engine, are -much- lower than from an equivalent
gasoline engine.

If you want more info on the subject I suggest you look for info that
wasn't solicited by politicians.

>>>Hindsight is always 20/20. We didn't know about such things as global
>>>warming, ozone depletion, the finite availability of fossil fuel, and

>>
>>
>>Wrong again, Dave. Read up on the Free Alcohol Bill of 1906.
>
>So you're denying that oil was cheaper to produce?

Is that what I said? Hmmm..... let's see now..... You said that "we
didn't know about such things as..... the finite availability of
fossil fuel, and the need for truly renewable fuel sources back in the
early 1900's". I replied with a reference that disputes what I just
quoted from your statement of ignorance. Yet you used that statement
to support your argument that the choice of gasoline (oil) over
ethanol was a "no-brainer" when, in fact, it was hotly disputed.
Gasoline -was- cheap and easy to produce from oil back then; but, as
Ford professed for decades, as shown by the Free Alcohol Bill of 1906,
and as demonstrated by your profound ignorance of the subject, it
certainly wasn't a "no-brainer".

>Read into the term "Net Energy Value" and then see how it has applied
>to alcohol over the years. Only recently has the technology advanced
>to the point where the NEV value is significantly positive.

Just as stated in the article you cited, the NEV has changed because
of obsolete information.

For example, the energy available from an engine running ethanol was
thought to be low because the compression ratio of the early engines
were so low. The fact is that ethanol engines burn more efficiently
with a higher compression ratio, but gasoline had already cornered the
market when engines with high compression ratios became available. The

solution is to simply build an engine with a higher compression ratio and reset the timing. It's a procedure that's been done for decades with race cars. Or are you under the presumption that gasoline is the fuel used at Daytona and Indy? It isn't. They use methanol, which is just another type of alcohol (and, ironically, more oxygenated).

There is also the issue of low-pressure distillation, which yields fuel-grade ethanol (99.5%) at a fraction of the cost of distillation at normal atmospheric pressure because the desired azeotrope boils at a much lower temperature (33.4C @ 95mm). In addition to a higher boiling point, problems with distillation at atmospheric pressure include the requirement for additional dehydration, and therefore more energy and expense. The biggest expense of low-pressure distillation is the capital outlay required to build an industrial-sized vacuum still that won't implode, but that shouldn't be a problem unless the government throws a monkey wrench in the works at the prompting of oil lobbyists.

Etc, etc. So once again your argument is bogus.

>If you would agree to back off on your blind, relentless quest to call
>me wrong at every turn,

I can't help it, Dave -- you -ARE- wrong at every turn! Maybe I wouldn't be so willing to point that out if you weren't so quick to spew forth your opinions of things about which you know little or nothing at all. At the very least you could take a day or two before you rattle off a reply in order to do some research -- even if it's on the internet -- and get your story right the -first- time. Maybe then you wouldn't spend so much time trying to defend your speculative rants with contradictions and lies, and more time staying on topic with the issues. Maybe even providing a few facts to back up your arguments..... aw hell, who am I kidding? LOL!

> I can certainly agree that alcohol has the
>potential of augmenting and offsetting our need for oil. At the
>current high oil prices, alcohol may be able to compete on a price
>basis. But cars cannot run on pure alcohol without modifications.

Some popular cars are currently manufactured as "dual-fuel" vehicles; they can run on gasoline, alcohol, or any mixture of the two just like the old Model-T. Converting a manufacturing plant to produce alcohol engines takes very little effort because the modifications are simple. In fact, many weekend mechanics have modified their own engines for alcohol (try the Mother Earth News archives). There are many alcohol conversion kits for small engines, and at least one manufacturer of replacement engine gaskets assures that -all- of their products are alcohol-friendly. The process of changing over is already underway.

>Alcohol attracts and retains water, which cause the corrosion of metal
>parts.

Lesson #17: An 'alcohol' is a class of organic compound of which there are many different variations. Methanol is an alcohol and is -not- hygroscopic. Ethanol is another, and it -is- hygroscopic.

Regardless, your argument has no foundation in fact. Ethanol has been used as a blend with gasoline in the US for a couple decades and shows no more corrosion than unblended gasoline. Many of your 'premium' fuels are actually ethanol blends even though they are not advertised as such, and they are used with no problems. In fact, Brazil uses a 22% blend and they haven't had any problems. In regular use, water simply isn't a problem.

High-ethanol blends and pure (98+%) ethanol have the ability to absorb a lot of water and still be usable. So unless you plan to store your gas for months in an open container, water isn't a problem with these fuels, either. The nice thing about alcohol is that even if it -does- absorb a lot of water it can be redistilled to make it usable as fuel. Regardless, water isn't such a bad thing -- it can actually -increase- the power of the engine. Water injection systems have been used as power boosters since WWII and are still used on race cars today.

So YET AGAIN your argument is bogus.

> Alcohol also deteriorates rubber parts.

Alcohols generally cannot dissolve or degrade rubber or plastics. The fact is that most plastics can tolerate alcohol -better- than gasoline or engine oil. The myth comes from the fact that ethanol and methanol molecules are smaller than the hydrocarbon molecules in gasoline and oil, and can penetrate some pourous materials that are impervious to gas or oil. Common problems are with cardboard gaskets and cracked or hardened seals. The resulting leakage led some "experts" to believe that the alcohol was degrading the gaskets and seals, but in fact it wasn't -- either they were not designed to be impervious to alcohol or they had already deteriorated to some degree (usually from age, but sometimes even on the shelf). People should be more worried about the atmosphere which contains ozone and Nitrogen oxides that are far more destructive to rubber and plastics than alcohol, oil -or- gasoline. And to further emphasize this point, propylene glycol (common auto antifreeze) is a large-molecule alcohol that is used in almost every water-cooled engine without any problems.

Another alcohol myth busted.

> Some changes would also
>have to be made to find the optimal stoichiometric air fuel ratio for
>proper combustion. For gasoline it is currently around 14.7:1. For
>newer cars with fuel injection systems and OBD-II Engine management
>systems, the changes could be made in firmware.

If you want to use the big words then use them correctly: either use "stoichiometric" or "air/fuel", but not both -- that's like saying something like, "....the standing wave SWR ratio is....".

The stoichiometric ratio for ethanol is 9.0:1; for methanol it's
6.4:1. And like I said before, several cars are currently made for
using both ethanol and gasoline. It's done by an automatic adjustment
of the injectors based on the stoichiometric ratio of the fuel being
used. Yes, the adjustments are controlled by a computer, as are most
other vehicle systems these days. IOW, you are about 10 years behind
the times, Dave.

> For older cars with
>carburetors, the changes would have to be done by changing jets and
>metering rods (After replacing all the rubber parts).

I don't think I would want to convert an old car to ethanol. Either
it's a classic in which case I'd pay for the gas, or it's a junker
that's got too many miles on it and wouldn't be worth the cost of
conversion. But it has been done just as you described. And it's been
done by many people for many, many years.

>technology, entertainment, or professional services.

My point was that while we have the unique ability to adapt to our
environment, we can -also- adapt our environment to our benefit. Some
people want to change the environment to benefit only them. Others
want to make changes that will benefit everyone, if not now then in
the future. Color me liberal if you must, but I prefer to think in
terms of the latter.

>price can affect demand.

OF COURSE there are factors that affect demand. I stated the very same point several posts ago when the topic first came up. What -you- can't seem to understand is the concept of price inelasticity! The price of gasoline is inelastic because price and demand have little effect on each other. Changes in demand have little effect on price, and changes in price have little effect on demand. This is really my fault for expecting you to understand concepts that are beyond your ability to look them up on google. But hey, I had to try, right?

Quit using the last election as the scapegoat for your dysfunctional
understanding of the Constitution, Dave -- the fact is that the right
to vote is NOT protected. Any state can -indeed- prevent people from
voting for any reason -EXCEPT- for reasons based on race or sex.

None of those military actions were intended to overthrow a standing
government. But I didn't forget them, nor did I forget the many
countries that were overthrown (or that we attempted to overthrow)
through indirect support and/or covert (CIA) operations. But then you
have to factor out those wars where the US was attacked first since
they were started by someone else. Add it all together and -then- tell
me which way the scales tip, Dave.

>in order to move past this partisan deadlock, it requires some
>compromise. And that is exactly what George H.W. Bush was forced to
>do, when he allowed democratically sponsored tax increases to pass
>through along with measures that he wanted. It was all part of the
>deal.

First, the president doesn't propose bills.

Second, a bill doesn't die just because it gets a presidential veto;
usually it gets sent back to Congress for more negotiations. If those
negotiations fail then either the bill gets shelved or they move for a
continuing resolution (depending on the issue).

Third, Daddy Bush was "forced" to increase taxes because he refused to
scale back spending in a no-growth economy (for example, pork-barrel
spending DOUBLED from 1989 to 1991). And while he was being "forced"
to increase -individual- income taxes, he threatened to veto any
increase of -corporate- income taxes. In fact, revenue from corporate

income taxes -dropped- during the Bush I administration. But if your crystal ball says that those tax increases were "forced" by the Democratic Congress then it must be true.

Also, revenue from corporate income taxes dropped to a near all-time low of 1.2% of GDP in 2003, the average being 2.5% and the lowest being 1.1% (Reagan, 1983). This reduction was 68% -greater- than the reduction of individual income taxes during the same time period. These tax cuts were made during wartime by a Republican administration -and- a Republican Congress. It's clearly the Republican's fault, but I'm sure you'll find someone else to blame.....

>>The historical trends of the budget follow the

>>achievements and blame the Democrats for Republican failures.
>
>Which is exactly what happened. Democrats are known (By everyone
>except you apparently) as the ones who tax and spend. Republicans
>normally slash and cut.

You have things a little mixed up here, as usual: BOTH Democrats AND Republicans spend like crazy. The differences are where that money comes from and where it's spent. The Democrats prefer to get their revenue from taxes while the Republicans like to max out the Federal credit card. The Democrats use the money to pay the bills and meet the government's obligation to all those retired citizens who payed into the Social Security system for most of their lives. The Republicans like to spend our -future- income on warmongering.

> The president can "propose" anything he wants,

>universal healthcare) in the beginning of his term, to much more
>centrist (Balanced budget, tax cuts, welfare reform) and closer
>aligned with those points which republicans also champion.

You've got bats in the bellfry, Dave -- Congress doesn't control Executive policy decisions. It's called "seperation of powers", another little tidbit that's defined in the Constitution. Oh, but that's right, you know the Constitution front to back......LOL!

> Clinton
>took something like a balanced budget and welfare reform away from the
>republicans when he claimed them as his own.

.....oh brother

Alright, we'll do this as a percentage of GDP, year by year:

Year Deficit(-) Debt

Johnson:
1965 -0.2 37.9
1966 -0.5 34.9
1967 -1.1 32.9
1968 -2.9 33.3

Nixon:
1969 0.3 29.3
1970 -0.3 28.0
1971 -2.1 28.1
1972 -2.0 27.4
1973 -1.1 26.0
1974 -0.4 23.9

Ford:
1975 -3.4 25.3
1976 -4.2 27.5

Carter:
1977 -2.7 27.8
1978 -2.7 27.4
1979 -1.6 25.6
1980 -2.7 26.1

Reagan:
1981 -2.6 25.8
1982 -4.0 28.7
1983 -6.0 33.0
1984 -4.8 34.0
1985 -5.1 36.3

1986 -5.0 39.5
1987 -3.2 40.6
1988 -3.1 40.9

Daddy Bush:
1989 -2.8 40.6
1990 -3.9 42.0
1991 -4.5 45.3
1992 -4.7 48.1

Clinton:
1993 -3.9 49.4
1994 -2.9 49.3
1995 -2.2 49.2
1996 -1.4 48.5
1997 -0.3 46.1
1998 0.8 43.1
1999 1.4 39.8
2000 2.4 35.1

Baby Bush:
2001 1.3 33.0
2002 -1.5 34.1
2003 -3.5 36.1
2004 -3.6 37.2

It should now be painfully obvious that the budget trends follow the executive administration, -not- the congressional majority, and -not- because of any war. It's also obvious that Clinton did a =monumental= job of trying to unfuck Reagan's mess, and that Baby Bush is fucking it up all over again -- with a -Republican- majority in Congress.

I await your next batch of excuses......

>to NIST, and NBS before that. At that time, traceability was at least $100 per
>piece. I don't see how it would be cost effective to get a counter with this
>traceability that could easily run you twice the cost of a new radio.

I was going to bring that up. The cost of calibration is often more
than what you paid for the used instrument itself, unless you have
access to a cal lab and can do it yourself. Once in a while I'll sneak
one or two of my pieces into the pile at work when we send a bunch out

to cal. But the bottom line here is that it makes little sense to buy a lab quality counter for its inherent accuracy, and not have it recently calibrated.

But these are the issues you have to face. If you want something that is "Dead on, no argument, last word on the subject" accurate, you will have to pay for it. If, on the other hand, you are content with being "close", a $40 counter will fit the bill. The choice is yours.

I get a kick out of guys on the air (SSB) arguing over who's on frequency and who isn't. One guy will tell another to tune to him because he's "a bit off". The other guy will respond that if there's a difference, it must be the first guy's radio, because his "XYZ brand" is "dead on", and it goes from there.

In the grand scheme of things, does it really matter? As long as everyone has the ability to synchronize their transmit with their receive clarifier, and can tune to each other, where exactly they are becomes irrelevant.

But you can see how the wide variation of quality test equipment and radio drift can make it nearly impossible to bring everyone's transmit frequency to the same exact point (Within 100 hz). That's why I don't like "locked on" transmit clarifiers.

I would agree. They are also known (At least on the earliest models)
to generate "hash" noise, which you can hear on the receive if it's
quiet.

I certainly wouldn't use the built-in counter on a CB radio as any
source of accuracy.

Sounds if you are one! It is people such as you which brings a bad name for all CBer's. I wish there was a way to be able to put you in place by a jail term and a fine. That would certainly start cooling the heels of arrogant, self-centered people and would help change the way that people look at you when they see a CB antenna on their rig or their house.

Everytime I visit my dad I take mine down just to keep him from griping about me associating with crude boors. He liked CBing many years ago but got feed up with people that make posts such as yours.

You are right. But wasn't there some provision that stated that if a
"part time" worker works consistently more than 32 hours that they
become considered full time?

>> Just as there are laws to prevent an employer

>placing the burden on the worker with a 10-99.

Independent contractors are common here too. I know many professionals
who actually prefer working this way. My company hires contractors for
special projects. For the company it's a win-win situation since, if
they like the person and they do a good job, they have the option of
hiring them on full time. If not, they can just let him go when his
contract expires. But the thing is, the company usually pays much
more for a contractor than they pay for a full time employee. The
people who like contract work claim that they can make enough to
easily pay their own medical coverage and still end up ahead of the
game. The biggest downside is the uncertainty of finding consistent
contracts. Many of these people work through an agency to help them
find contract jobs. The downside to that though is that the agency
takes a "cut" of what a company would otherwise pay you. On the other
hand, some of these agencies will pick up medical coverage, and you
end up becoming an employee of the contract agency. There are many
variations.

On the other hand, the federal unemployment rate is around 5.1%. Even
if that number under represents the total number of unemployed people,
and it's really 10%, that also means that 90% of eligible people are
working.

>> Try growing up during the great depression in

I'm not so sure how true it is that we are giving free healthcare to all Iraqi's. That was a rumor started by a liberal rag, based on war related casualties. That doesn't mean that every sick person in Iraq gets free healthcare at our expense.

If the government provided all of us healthcare, it would cost a huge sum. Just the medicare prescription benefit that Bush signed in (And I strongly opposed) is a huge adder to the deficit. To cover every American, it would require a sizable increase in taxes. I already have good coverage, and it costs me less than the tax increase to cover the government's plan. So why should I favor it?

It's nothing more than socialism. Taking from those according to their means, to give to those according to their needs. And when the government is paying the bill, those "needs" will increase exponentially. There is a certain segment of the population that like to take advantage of as much free money as they can get.

>
>What do you refer to as a privately owned utility? You either have city,
>county, or well water. I have city -and- a well.

Wells were usually used to water the grass. The new homes I was
looking at all had one. What I meant by a privately owned utility was
a utility that was built by the housing developer to provide water to
their developments. It's not owned or operated by the city, it is a
private entity. I understand that after a certain number of years
passed many of these private utilities were sold to the city.

>>Heat was not an issue as most homes used

And it's better there too. There's nothing tastier than a fresh from
the grove Florida Orange juice.

We have vegetable stands too. Obviously we can't grow citrus fruits,
but we do tomatoes, cucumbers, corn, lettuce and most common produce.
And it's cheaper than the stores usually too.

No argument. But the threshold point of where "you means" is, is
dependent on your salary and what your expenses are. If they both
decrease proportionately, then you can still be within your means. If
the salary decreases more than your expenses, you could be living
beyond your means.

Because there is no credible evidence that all Iraqi's, beyond those
injured as a direct result of war activities, are being medically
covered at our expense.

>>That's what self sufficiency and personal
>>responsibility are all about.

>One can not be self sufficient if one is sick and ailing.

>>People got sick in the 1930's too.

>Try to stay relevant, Dave, and not slip into your preference of
>discussing ancient history that will not change anything.

Comparing different periods of time is helpful in providing
perspective. In the 1930's people didn' t look to the government for
help, they knew that they had to depend on family and their own drive
to survive. Today's generation, as soon as they get a hang nail, they
want the government to "help" them. The point is that people got just
as sick in the 1930's as they do now, and they dealt with it. People
need to learn how to deal with it now.

>> And you know what? They went to work

>against coming to work ill.

Then those same companies cut back on the number of sick days an
employee can take. It sends a confusing message.

But if you don't have sick days and you have mouths to feed, you do
what is necessary. THAT is responsibility. I guess today's solution
would be to beg the government for federally mandated paid sick
time....

Doesn't change the problem. Democrats and liberals alike love to solve
a problem by throwing money at it. In the case of heathcare, the more
money to throw at it, the hungrier it will get. Until you gain control
on the spiraling costs and malpractice suits run amuck, the costs to
consumers will continue to rise. That is, unless you stop all forms of
insurance, and let the free market reassert control on what medical
professionals charge.

>>Fraud is

>If they can't, the fault lies with your government because they are the
>ones that regulate the premiums and the industry.

No, the government has a very little part to play in the operation of
a free market industry. They can set guidelines and set some
regulations and protections. But what you are suggesting is that the
government insure the insurance companies. But psychologically, if
everyone assumes that the government is there to "bail them out"
whenever a hardship comes, there is no incentive for these people and
entities to effectively plan for disaster and to take greater
responsibility for their own life.

>> You can't get blood from a rock. If

>>live in the trailer until their home was rebuilt.

>Again, not everyone has families that can help, Dave.

Everyone has a family, unless you were grown in a lab. Even then your
"donors" could be considered family. The fact that many people burn
their family bridges is not our problem. Maybe without that government
safety net, people would be a little more considerate of their
families. You never know when they have to lean on them.

> If it were that
>simple, there would be no displaced families there now,,,and there are
>thousands and thousands.

A testament to just how bad our society has gotten with respect to
traditional families. 50 or 60 years ago, and this wouldn't be a
problem.

>>THAT is what I meant before by leaning on
>>and getting support from family. I can't believe

>>Not an issue. Peer pressure is something you
>>have to deal with.

>And something whcih parents have no control to what their children are
>exposed in public schools.

They have control in showing their kids that the bullies are the ones
who have problems. You teach your kids to be better than that. That's
how I survived.

>> I took a lot of peer pressure abuse when I
>>was a kid.

>Dave, multiply that times your highest faction you can handle and then
>you amy come close to understanding the level of peer pressure today.

It's not that much worse. We're just more sensitive to it now,
especially in light of Columbine. In my day, bullying was actually
chalked off as a part of "character building", a "boys will be boys"
attitude. Some of the teachers (Mostly the phys-ed types) would
actually encourage some of it (or turn a blind eye to it). It was just
as destructive then. But we learned to deal with it, rather than
expecting someone to put us on anti-depresents.

>> You learn to ignore and deal with it. You learn
>>that those people are not worth your time, and
>>when it's all said and done, they'll be serving
>>you fries 20 years from now.

>You know better than to try and tell a child what it will be like in 20
>years. 20 weeks is an eternity to kid. 20 years is inconceivable.

It's a tough point to make when most teens live in the here and now.
But persistence worked for me. I learned to comprehend the long term.
If I can do it, anyone can.

>
>Again,,,bullshit.
>
>>Not at all.
>
>Perhaps just you are just naive, then.

No, it' makes perfect logical sense. Many experts in the field agree
with it. The point is to always be involved in your child's life. But
do it in a non-controlling subtle way, where you are always there, but
they don't realize that you have as much influence as you do.

>>A kid who plays sports, acts in drama clubs,

>>to hang out with the slackers.

>Your mistake is believing drug use by children is inherent to these you
>call "slackers".
>
>>Drug use is done mainly as an escape by
>>those who can't handle life.
>
>Then the same can be said for alcohol and obacco users.

Yes, and it's just as true. Although smoking was done, mainly to look
older, more worldly, and "cool". But since smoking has fallen out of
favor due to the health risks, the incidence of teen smoking should
begin to fall off.

>>Mostly this is a result of isolating parents who
>>protected their kids for too long, and who now

>>world. They have self-esteem and social
>>issues. But in their minds they are perfectly
>>ok, and they try to get other kids to partake as
>>well, to further bolster the illusion of normalcy
>>that dopers tend to believe.

>Same can be said for those who drink, then.

Yes. If the sole purpose of drinking is to get drunk. Those who like
alcohol just for the taste of it, have a somewhat different reason. I
used to drink when I was younger. But I didn't get drunk all that
much, as I didn't like the aftermath. But when I was at that young
age, it was believed that drinking was less destructive than drugs.

>>Being an alert and supportive parent who can
>>intercede when your kid starts to have
>>"problems" before they turn to drugs.

>Drugs are not the problem Dave, they are a symptom.

A symptom of a much larger psychological problem. One that should be
easy to spot if you are an alert parent.

>>That's why it's also important to know their
>>friends.
>>ï¿½ï¿½Giving a kid an activity that they can be
>>proud to excel at and bolster their self esteem

>>Keep your kids poor! And for God's sake, don't
>>give them a credit card.
>ï¿½
>
>Keep your kids poor? That's the most ridiculous thing I ever heard.

Is it? If they don't have money, they can't very well buy drugs now
can they? Remove temptation. It works for me when I'm dieting. No crap
food in the house, and if I get the urge to snack, and there's nothing

there, I don't do it.

>On
>one hand, you claim that if you act one way with your kids, they will
>avoid drugs and other pitfalls you mistakenly only attribute to
>"slackers", yet you believe giving them a credic card or a pocket full
>of cash will destroy the values you instill in your kids.

Kids are too immature to handle the responsibility of spending money.
They often make poor and impulsive buying decisions. They have to
learn how to spend money wisely. It's not about destroying values,
it's about making mistakes.

>Oh man, just you wait. You are in for the shock and heartbreak of your
>life like you can never imagine.

No I'm not.

>>ï¿½Lastly, never lose communication with them.

>>years, and you've already lost.
>
>
>I don't equate not keeping my children "poor" (as you do) with
>permitting them to "run amuck".

No, they're not necessarily the same thing. But allowing your kid to
"run amuck" generally means allowing them to engage in destructive and
disruptive behavior without strict corrective action being taken.
All kids have a rudimentary value system. You, as an alert parent,
knows what means the most to them. Take it away when they are bad, and
they'll eventually learn to be good.

>> Talk to them always. Know all their friends
>>(and their parents).

>
>
>Again, despite your mistaken core beliefs, most successful people do not
>laigh at those less fortunate than themselves. It's also not a very
>christian thing to do, let alone something a parent should be teaching
>their child.

You don't laugh at those truly less fortunate. You laugh at those who
try to bring themselves up by bringing others down. You laugh at those
who have gobs of potential, but waste it away becoming a slacker. If
someone is less fortunate due to their own actions (or inactions) then
they have no one to blame but themselves and we should have no pity
for them.

>> I used to laugh a lot when I
>>was in school. I still do.
>>I know how my parents raised me. I know from
>>a child's perspective which disciplines worked,
>>and which ones didn't.

>You know what works with -you-. You have no clue what works in other
>families, religions, faiths, cultures, cities, etc. Your myopic view
>that everyone shares your beliefs has never been more wrong, as the
>majority of good caring, parents would never laugh at the misfortune or
>expense of other's, regardless the situation.

If you stick your hand in a flame, does it not burn the same for you
as it does for me? There are some things which are pretty much
universal. Those are the lessons I learned as a kid, and bring to the
table now as a parent.

As far as the slackers and bullies are concerned, laughing at them and
their own pathetic existence is hardly a good enough payback for the

pain that they invoke in others.

>>ï¿½I use what I learned to my advantage as a
>>parent.

>As far as learning as a parent, you are in the infancy stage.
>You ignore the fact that peer pressure is greater today than you can
>comprehend
>
>>No it's not. It's the same old story done for the
>>same reasons.

>Yea, ok. How many people were killed for their sneakers or clothes when
>you were a kid, Dave?

None. We didn't wear expensive clothes, that anyone would want. I had $5.00 sneakers. But many were stripped of their lunch money. Kids today have lost something relating to the value of human life. Mostly I blame the parents of the "let them express themselves" generation.

>>People elevate themselves by trying to make
>>other people feel lousy.

>Like laughing at those less fortunate than you, yes, I see your point,
>but you are extremely hypocritical.

Nothing hypocritical about it. You laugh at those who would do you dirt. That's how you fight back at the bullies. You let them know that they can't affect you, and they'll leave you alone to find someone else they can terrorize. So don't go pulling a liberal on me by suggesting we have sympathy for the real aggressors. "Oh, he's just misunderstood, or he's a victim of his circumstances (Yea, aren't we all?)". Quite frankly I don't care, he's not my kid, and not my problem. But if he tries to make my kid's life as miserable as his own, he's in for a shock.

>>Once you understand
>>the psychological forces that drives this, you
>>can defuse them.

David T. Hall (N3CVJ) wrote:
The number of
those without health care (seniors included) far outnumber those healthy
workers who get laid off.

>Most companies who employ skilled workers,

>have some form of healthcare coverage as

>part of their benefits package. I've never had a
>job without it.

Your personal situation is irrelevant to the majority.

>Not really. Most people who are in full time

>gainfully employed jobs have some form of

>health care coverage. Unless you're a part

>time worker, chances are you have some

>coverage.

Each year (for the last 4 years) the number of part-time workers has
increased as the number of those laid off has increased. A growing trend
has been major employers hiring at 32 hours or less to avoid offering
health care benefits.

>There are laws to discourage this practice.

Bullshit. Any company can fill their positions with ft or pt employees.
There is no law that claims copanies must offer ft work.

>You are right. But wasn't there some provision
>that stated that if a "part time" worker works

>consistently more than 32 hours that they

>become considered full time?

That's a hell of a way of merely saying jobs that require more than 32
hours per week are considered full time.

> Just as there are laws to prevent an employer

>from paying you a "Salary" instead of an

>hourly rate to avoid paying overtime. Look into
>the federal wage and hour laws.

There is nothing that prevents management from working longer hours when they are salaried and their job requires it.
  I have to abide by the laws you speak of but it seems you are not familiar with them. Another easy way to avoid offering benefits is to hire people as independent cotractors, from laborers to clerical..this is very common in Fl. It also negates the need for federal withholding, placing the burden on the worker with a 10-99.

>Independent contractors are common here

>too. I know many professionals who actually

>prefer working this way. My company hires

>contractors for special projects. For the

>company it's a win-win situation since, if they

>like the person and they do a good job, they

>have the option of hiring them on full time. If

>not, they can just let him go when his contract

>expires. But the thing is, the company usually

>pays much more for a contractor than they

>pay for a full time employee.

They actually pay LESS since they don't have to pay for the contractor's health insurance and workman's comp insurance. When the cost does actually cost the company more, it is simply a deduction taken at tax time as a cost of doing business.

>The people who like contract work claim that

>they can make enough to easily pay their own

>medical coverage and still end up ahead of

>the game. The biggest downside is the

>uncertainty of finding consistent contracts.

And many of them have been doing such work for twenty some years or longer.

>Many of these people work through an agency
>to help them find contract jobs. The downside

>to that though is that the agency takes a "cut"

>of what a company would otherwise pay you.

Not true in the medical field at all. I have a good friend who is a respiratory therapist. He has been working with a medical agency since 1989 that specializes in 12-52 week contract assignments. He goes all over the country and his apartment/house is always paid for, he often gets to choose his own place to live or he can accept a stipend of usually around 1000-1200 per month. He makes up to 32 bucks an hour, no less than 26 an hour, depending on specialty floors he works and geographical areas. His agencies receive a flat fee from the hospitals or they charge the ospital two bucks more on the hour than he actually makes per hour. This is not money that the company would otherwise pay him, as these contract workers would never make that hourly wage working for a hospital directly.

> On the other hand, some of these agencies

>will pick up medical coverage, and you end up
>becoming an employee of the contract

>agency. There are many variations.

The medical agencies are standard. They all are covered under health insurance, but the worker often must contribute, as the agency covers only a portion of the insurance cost.

> Resumption of healthcare coverage is tied to

>the laid-off worker's need to find another job.

So what happens in between when on needs prescription medication? When one is laid off from their job and offered the mandated COBRA, the cost is always greater than the original. Now, you have people who can not only pay their bills, but can't afford their medical covereage. What is your solution?

>No one said that life would always be easy.

If you don't have a solution, say so, but saying resumption of healthcare is tied to finding another job goes without say. Problem is, the jobs do not exist..check your stats from the feds. Last month, the feds fell short of 100,000 jobs they expected to add to the stats of added jobs for the month.

>On the other hand, the federal unemployment

>rate is around 5.1%. Even if that number

>under represents the total number of

>unemployed people, and it's really 10%, that

>also means that 90% of eligible people are

>working.

That is not what those statistics mean, but I'll play devil's advocate for a second...the stats don't mean squat when those certain areas are hotbeds of layoff activities, such as the example you gave with your small towns no one ever heard of outside of Pa with the exception of Allentown.

> Try growing up during the great depression in
>the 30's as my parents did, and then tell me

>what hardship is.

How are your parents any different from any other of our parents who did the same thing?

>They're different in that they understood the

>hardship and got through it without screaming

>for the government to bale them out.

And you just naturally assumed these traits were inherent only to your parents. Interesting.

>What we are going through today is a walk in

>the park compared to back then.

>When I was a kid, all I would hear were

>stories of how people did "this and that" to get

>by. You've probably heard the stereotypical

>shoes full of holes in the snow.

Uphill,,,both ways.

>And they were glad!

>Except that these were true. I guess my

>perspective is a bit different than yours. To

>me, the examples you've given are a speed

>bump compared to life during the depression.

Except you weren't there and did not experience anything remotely associated with such a hardship as that.

>Not directly no. But when the family would talk
>about it seemingly endlessly when I was a kid,
>you'd swear they were reliving it.
-
>That way, no one layoff can cripple a

>significant portion of the population.

Depends what you consider a significant
portion of the population. I can think of several examples..Reagan
importing cheaper metals from the Asians decimated the steel industry in
Pa and Ohio.

>I live within an easy drive of 4 different steel

>plants. The towns that surrounded them were

>dependant on those mills for the majority of

>their income.

Not one of those small towns you mentioned were major steel producing
towns. In fact, those towns are obscure to all but those who live near
them, except for Allentown, and that was made famous by Billy Joel.

>But the problem was very real to those who

>lived there.

As is today, even with you pointing to what you feel is an aceptable and
positive unemployment rate to undermine those who were laid off.

> Phoenixville was especially hard hit when not

>only the steel mill closed, but the Firestone tire
>plant closed, and the Budd Company (Made

>truck and train bodies) closed as well. But

>today, the town is doing alright. A whole new

>host of tech and office type jobs opened up.

>But 20 years later and things

>have pretty much recovered. People can get

>pretty creative when they need to be.

Recovered from what? You said it couldn't happen, but by invoking the
fact they recovered, you unwittingly admit the towns were indeed
crippled from such layoffs..

>Only temporarily.

It happened. An entire generation came of age and went during that
"temporary" era you refer.

>.20 years is a blink of an eye in the grand

>scheme of things.

Not when those are the years one is growing up in such a town.

>Recovery started sooner than that.

Not in the majority of US Steel towns it didn't.

>It took 20

>years to finally raze the old buildings.

>That's the whole point. Life goes on. People

>adapt and adjust. Allow them to do that, give

>them a few tools to help them, and they will

>solve their own problem.

Except many cities did not recover.

>Most did, and still do.

No, most did not recover for over an entire generation coming of age. Again, I direct you to the real steel cities, not some small industry town that has a single mill or so.

>If not, people always have the option to move.

No, that option is not always available for people.

>We don't need the government mollycoddling

>us and indoctrinating us into becoming

>dependant on them.

Asking for health care from those who are charged with regulating it when they have the best care available and toss our cash away like pissing in the wind and give away health care to the very same people you say are trying to kill us and wage war and terror on us, is not mollycoddling. Kind of difficult to explain your position when you suport these leaders who "mollycoddle" with healthcare those you repeatedly insist are our enemy and hate us and want us dead.

>I'm not so sure how true it is that we are giving
>free healthcare to all Iraqi's.

Only you said "All" Iraqis.

> That was a rumor started by a liberal rag,

>based on war related casualties. That doesn't

>mean that every sick person in Iraq gets free

>healthcare at our expense.

That's exactly what is happening, Dave. Instead of knee-jerk reactional blames from you, try a little investigation and reading. ANY Iraqi can walk up to the military and ask for health care and recieve it, to some extent. I'm not talking about an MRI, I'm talking about antibiotics, treatment for wounds, injuries, etc., whether "war" related or not.

>If the government provided all of us

>healthcare, it would cost a huge sum.

It would be a fraction compared to what the war is costing.

>Just the medicare prescription benefit that

>Bush signed in (And I strongly opposed) is a

>huge adder to the deficit.

A deficit created and made deeper daily by the war on thee wrong people. That sucking sound could have been avoided if only Bush would have been honest.

>To cover every American, it would require a

>sizable increase in taxes.

Bullshit. The war in Iraq cost much more than it would cost to subsidize every living American.

>I already have good coverage, and it costs me
>less than the tax increase to cover the

>.government's plan. So why should I favor it?

That's the "As long as I got mine" attitude that put this country in the financial pit it is become.

>It's nothing more than socialism.

And socialized medicine is long overdue.

>Taking from those according to their means, to
>give to those according to their needs.

It's not taking, Dave. It's fixing the system with the cash they already have as opposed to pissing it away waging war in some foreign land that never attacked us or was even a diect threat.

>And when the government is paying the bill,

>those "needs" will increase exponentially.

Sort of like the war. People are waking up though, as Bush had his extension of a portion of the (un)Patriot Act rightfully defeated yesterday and he threw his usual baby tantrum and threatened to start vetoing other things.

> There is a certain segment of the population

>that like to take advantage of as much free

>money as they can get.

And when you stop equating medical care with giving away things, you may begin to understand each.

Lack of diverse skilled jobs?

>Excuse me, I should have said diverse high

>.paying skilled jobs.

When was the last time you checked the
stats? Florida has led the country in adding new jobs and has not felt
the inflation the country has felt the last so many years. The pay here
was always offset by the lower cost of living.

>All that sounds fine and all, but the long and

>short of it is that for the field that I am in, the

>salaries offered were between 20 and 40%

>lower than they are here. The employers there
>(And I interviewed with quite a few) once they

>find out where you're from, tell you right up

>front not to expect a comparable salary.

Ok,,in the same manner you claimed one who lived in another state could
not tell you about Pa, what makes you feel you can tell a lifelong
resident of another state about their state?

>Because I did some extensive research

So did Shark on your laws,

>Says you.

No, says Shark.

>I saw no evidence of that.

So it comes down to your personal core beliefs of when to selectively
apply your rules.

>But please stay focussed.

but you stil claimed because one lived
somewhere else, they cold not know the particulars as well as one who
resided there.

>Which is true in most cases.

Except in yours, of course,

>when I was considering the move there 15

>years ago.

15 years ago was another era in Fl.

>Things have changed that much? Ok, I'll take

>your word for it, since you live there.

>I walked into a K-Mart and compared prices of
>the things that I normally buy with what I pay

>up here. My wife was especially knowledgable
>about clothing prices.

It's not a myth, Dave. There is no state income tax and prices have
always been lower in Fl,,until recently (last 10 years).

>Slightly lower in specific cases, like locally

>produced goods like fruit and other food. Yes,
>there are certain costs which are lower in

>Florida. The homestead exemption saves a

>bundle on property tax. Homes are (were)

>cheaper.

No more.

> There is no state tax, and utilities are

>somewhat lower.

Utilites are higher, especially electric, as the majority of homes do
not have gas.

>Actually, when I was checking, I was currently

>paying 15 cents per kilowatt hour. In Florida (

>In Brevard County), the rate was about 8

>cents per kilowatt hour. Water rates varied

>depending on whether you had "city" water or

>a privately owned "utility", but they were

>cheaper by and large than what I paid up

>here.

What do you refer to as a privately owned utility? You either have city,
county, or well water. I have city -and- a well.

>Wells were usually used to water the grass.

And for agriculture, animals, drinking, bathing, etc.

>The new homes I was looking at all had one.

Oh, THOSE type wells are into the water table just below the
surface,,that's sulphur water and as you say, used just for grass
watering.

>What I meant by a privately owned utility was

>a utility that was built by the housing

>developer to provide water to their

>developments. It's not owned or operated by

>the city, it is a private entity. I understand that

>after a certain number of years passed many

>of these private utilities were sold to the city.

I'm not aware of any such utility being built by home developers here.

>Heat was not an issue as most homes used

>efficient heat pumps, which spent most of their
>times as air conditioners. With insulation

>ratings of R34 in most new homes, the cooling
>costs offset the normal eastern PA winter

>heating cost by a considerable margin.

Gas was only recently introduced as a choice for heating and cooking,
and even in most cities, it has to be trucked in (propane).

>I prefer electric for cooking (When I'm not

>grilling).

Not me. I hate it, but until we get gas lines, I'm not paying for
propane.

>Personal choice I guess. I grew up with

>electric appliances, so that's what I'm used to.

> And heating in Florida is not normally an

>issue, as you know. A couple of logs on the

>fireplace will take the chill off on those few

>chilly mornings.

Depends where you live. The top of the state, even from Ocala northward
use their heat all winter every winter. 30's is a bit chilly and a
fireplace can't heat the entire house.

>I was in Central Florida (Brevard), and was

>told that heat was a rarity for about a three

>week span in January.

Yea,,,that would be about right, but it damn right gets cold in the
winter time, now. Never used to, but it does.

> Yes, many costs ARE lower to an extent. But

>if you try to buy something like a car, gasoline,
>or a major appliance or consumer good, the

>cost is pretty mush the same as it is in any

>other state.

Again,,nope. Autos are not only in better condition (speaking of
used, of course) but new cars are somewhat cheaper here, so are most
manufactured goods.

>Not according to what I found. I didn't bother

>with used car pricing because there is a

>certain amount of subjective perception.

(shrug) I go by NADA or edmunds.com perceptions, as does the auto
industry. Check resale and trade-in values.

>But the MSRP of new cars there was the

>same (or very close) as what I see up here.

I still say they are cheaper here. I've seen the SUV prices in the north
and they are higher. That's why when you check out a major car maker's
site on the net, they need to put in your zip code for pricing.

>Sure, no one pays MSRP, but the degree of

>discount is not going to be any more

>significant there than here.

And Georgia is even cheaper.

>Gasoline was actually more expensive back

>then than up here. What do you pay for gas

>now? Last week, I paid $1.94/gallon

Last week I paid 1.94 also. This week it's 2.03 but I haven't checked
gasbuddy.com in a few weeks.

>I'm up to $2.04 as of today. But that just goes

>to show that there isn't enough of a difference

>in most consumer costs in Florida to justify a

>30% reduction in salary.

I disagree. Quality of life is much better, at least for me. I would trade for the weather...I need to see the sun daily.

_
 The exceptions are the tourist areas and coastal regions that are developed. I can get a gallon of milk for 3 bucks here. I can get a gallon of milk in Chiefland for 2.29. this is the norm, not the exception.

>I can do the same up here. Orange Juice is

>$2.00 a half gallon (for the "Not from

>concentrate" stuff). That's something I would

>expect to be much cheaper in Florida.

It is, bit not in the stores. Go to the stands or groves.

>And it's better there too. There's nothing

>tastier than a fresh from the grove Florida

>Orange juice.

>We have vegetable stands too. Obviously we

>can't grow citrus fruits, but we do tomatoes,

>cucumbers, corn, lettuce and most common

>produce. And it's cheaper than the stores

>usually too.

Stores rape us on the prices for citrus.

>Dave

>"Sandbagger"

>
>
>Really? I seem to recall reading that he pushed for ethanol fuel well
>into the 1940's. And didn't both the Germans and Japanese use alcohol
>as their staple fuel during WWII?

I checked my facts on this; turns out that Germany got their oil/gas
from Romania. And with the US oil shortage during the war, ethanol was
manufactured -by the oil companies- for both the military and domestic
markets. In fact, during that time they actually -promoted- ethanol as
being a fuel that was superior to gasoline. Cars were made well into
the 40's that could run on ethanol.

<snip>
>And your quote makes no mention of the quantities of emissions which,
>from an ethanol engine, are -much- lower than from an equivalent
>gasoline engine.

Correction: That should read: "....your quote makes no mention that
the quantities of emissions from an ethanol engine are -much- lower
than from an equivalent gasoline engine".

<snip>
>Some popular cars are currently manufactured as "dual-fuel" vehicles;

More specifically they are called "Flexible-Fuel Vehicles", or FFV's,
and have been manufactured in several of the Chevy/GMC lines since at
least 2000.

<snip>
>> Alcohol also deteriorates rubber parts.

I just discovered an additional reason for the myth: some people tried
using -denatured- ethanol as fuel and ran into some problems. The
additives that are usually used to denature alcohol are compounds such
as acetone, MEK, toluene, and other solvents that do major damage to
rubber and plastics (and the human body). After this was discovered to
be the problem the government allowed ethanol to be denatured using
gasoline. More recently, regulations on the production of ethanol as a

fuel have been lifted, and you can now homebrew your own ethanol fuel
without a license.

It just amazes me how amp users push the limits out of a amp. If the outputs can do 200 watts at RF out compression, they will drive it to do 200 watts dead key and modulate it with AM the P-P watt out is 200 watts with downward modulation.. They don't seem to realize that if they drove it to 35-50 watts out and then apply modulation their signal would be just as strong, hitting 200 watts P-P Out and the current draw would be less, also much less heat and sound better. Oh shit I said sound better, that is not the way in CB, the more they can F
* up a radio, cutting limiters, adding a mic that overdrives the radio into distortion, and using class C amps the more they like it.

There is no reason for a 100 Watt linear to NOT DO 100 watts dead key am with 100% modulation... same goes with all other amps or greater/lesser ratings...

On SSB carrier will be controlled by modulation, naturally...

However, "swing kits" and cheap amps which count on "swing" are nothing but junk... a junk amp cannot pump our 100 Watts continuous (however, even in amateur operation amps are usually rated at 50% duty cycle--basically means 1 min key down, one minute off--on the avg--or 50% on time during conversations)

"Backwards modulation" can be caused by over 100% modulation which causes signal to be "stolen" from rf amplification and given to more audio, or a linear NOT peaked correctly...

There are a LOT of junk amps out there and those purchasing/using them just are not aware of what a real amp is...

And of course, if you buy a 500 watt amp and cut down drive from the transmitter so that the linear is only putting out 250 watts it will run much cooler--possibly even able to run a 100% duty cycle... and a "swing kit" that is bouncing the signal up and down with am audio is just a junk toy... I guess the "good ole buddies" just like to see a meter swing on am... hey, whatever keeps a child entertained...

Warmest regards,
John

Hello, Vinnie

I'm not sure the 30L1 would do 1,000 watts. We used a KWM-2 and a 30L1 in the #2 position at the KG6AAY hamshack. The #1 position used a Henry 2K.

The legal limit back then was 1,000 watts dc input to the final (not 1,500 watts pep output like today). My guess is the 30L1 might put out 600 watts pep. The Henry was capable of considerably more. Exactly what the 30L-1 could do, however, I'm not entirely sure.

I've seen that Henry putting out 1200 watts average on voice peaks on SSB and even more on cw ;)

Of course, that couldn't touch that RCA monster that was used once. Hooked to a rhombic 200 feet in the air and 600 feet on a leg, it pumped some 40,000 watts output. It could punch a hole through an almost dead band (everyone was running S-2 and it was 40 over 9 back in the states from Guam Island). :))

Best regards from Rochester, NY
Jim

Lines of quoted text usually begin with an arrow (>) or sometimes a
colon (:). Both characters should turn the quoted text blue or some
other color. For example,

>Text quoted with an arrow;

and...

:Text quoted with a colon.

You can type in the characters yourself like I just did, but your
newsreader should be capable of automatically adding them to each line
of quoted text when you reply to a post. Check your reader's setup
(options, preferences, configuration, etc.).

Talkback is one of the most stupid things yet to come along in CB.

Hello Frank, he's using googles interface. I think there is an option to
show quoted text while using their web reader but i'm not sure how it's
done.

Toledo is a sewer. There are places to stay all along the Lake near Cedar
Point tho.

I started out working for someone, and then went on my own. It takes all of the above as well as doing a good job at a competitive price. I wouldn't want to be starting out now tho...too many people have jumped on the bandwagon and are cutting each others throats with their prices.

So I've noticed. Some claim to be the cheapest while others are price
gougers. But few around here do quality work -- most of them I call
"slash-n-dash" services. I'm thinking that quality at a -reasonable-
price might make the difference around here. Got a favorite chemical
mix? I've been using Lilly Miller's Weed-n-Feed and it does ok. My
uncle used to swear by it. Is there something better?

I mix my own broadleaf herbicide, I buy the components in bulk. Unless you
have lots of weeds a blanket herbicide application like weed and feed isn't
required since it has no pre-emergent value, it only controls existing
weeds.

Weed b gone liquid and a pump up or hose end sprayer will allow you to
target your pesticide application to just the weedy areas. It also works
better than granular herbicide on the hard to kills like oxalis, spurge,
sorrel etc.

So what's a good pre-emergent broadleaf herbicide?

>Weed b gone liquid and a pump up or hose end sprayer will allow you to
>target your pesticide application to just the weedy areas. It also works
>better than granular herbicide on the hard to kills like oxalis, spurge,

The biggest problem around here is clover -- whole yards full of it.
Personally, I like it better than grass, but then I'm wierd. I'll try

a broadleaf spray and reseed.

And before I crash, I just have to jump on the soapbox for a moment.... I can't believe that there is so much hatred for the Dandelion! It's not just edible but every part is edible, and not too bad if cooked up right. My biggest gripe is that such a common weed is detested even though it has been proven to actually -improve- the overall functions of the circulatory system -without- side effects, and -without- a prescription. And it makes a pretty decent decaf latte. If there's proof that God really exists, it might just be the Dandelion -- yet we exterminate it as an offensive weed. Kind of ironic how history repeats itself..... end soapbox.

None that are labeled for cool season turfgrass, with the exception of
Isoxaben, and its efficacy isn't real great.
>

You'll have much better control of clover with a liquid application of
herbicide such as Ortho's weed b gone. Clover has a waxy cuticle so the
granular control products have a hard time sticking to the foliage, where
liquid will coat and stick. One trick is to add a product called
spreader-sticker to your mix, that -really- helps its efficacy.

For sale. Ex.cond. President Lincoln 10m. all mode mobile radio. This is the same radio as the Uniden HR-2510. Radio is about 10 months old and is the new model with the MRF-455 final. Only used as a receiver w/0 TX time on it. Have the original box,manual,mic,etc. Again....unit is like new. Price is $240.00 + shipping.

Also for sale. Palomar Skipper 350 watt mobile linear amplifier. Unit is in ex.cond. and I added a cooling fan to it (no extra holes). Very little use. Never mobile,was used in the house. Price is $75.00 plus shipping.

If you want them both,price is $300.00 plus shipping from 96001. Can email pics. Please contact my directly at kf6ikc @ sbcglobal.net and not
to the group as I rarely check look at the list.

73 Stan

Promptly ratted to FCC. You keyclowns are not allowed to sell illegal
equipment on here. AKC so ordered long ago.

660. Free Money

Newsgroup: rec.radio.cb
Date: 2005-06-18 23:21:27 UTC
From: eulB <eulbclark@gmail.com>
Message-ID: <1119136887.252973.248380@g14g2000cwa.googlegroups.com>
Source record: 201547

Turn $5.00 into $50,000 in a few weeks. This DOES work. I'm not selling anything.
This DOES work. That is why I'm doing it again.
READING THIS COULD CHANGE YOUR LIFE!!!
I found this on a bulletin board like this one and decided to try it.
A little while back, I was browsing through a newsgroup, just like you are now, and came across an article similar to this that said you could

make thousands of dollars within weeks with only an initial investment of $5.00! So I thought, "Yeah right, this must be a scam", but like most of us, I was curious, so I kept reading... I also did an internet search and found nothing but success stories.
Anyway, it said that you need to send $1.00 to each of the 5 names and address stated in the article. You then place your own name and address

in the bottom of the list at ..5, and post the article in at least 200 newsgroups. (There are thousands) No catch, that was it. So after thinking it over, and talking to a few people first, I thought about trying it. I figured "what have I got to lose except 5 stamps and $5.00, right?" Also people spend more than this on things that bring MUCH less return than this does!
Then I invested the measly $5.00 (I use the word "measly" because $5 really is measly compared to the money I have made through the initial investment). Well GUESS WHAT!!... within 7 days, I started getting money in the mail! I was shocked! I figured it would end soon, but the money just kept coming in.
In my first week, I made about $25.00. By the end of the second week I had made a total of over $1,000.00! In the third week I had over $10,000.00 and it's still growing.
This is now my fourth week and I have made just over $42,000.00 and it's still coming in rapidly. It's certainly worth $5.00, and 5 stamps,

I have spent more than that on the lottery!!
Let me tell you how this works and most importantly, why it works....
Also, make sure you print a copy of this article NOW, so you can get the information off of it as you need it.
I promise you that if you follow the directions exactly, that you will start making more money than you thought possible by doing something so

easy!
Suggestion:
Read this entire message carefully! (print it out or download it.)
Follow the simple directions and watch the money come in! It's easy.
It's legal. And, your investment is only $5.00 (Plus postage)
IMPORTANT:

This is not a rip-off; it is not indecent; it is not illegal; and it is

virtually no risk - it really works!!!! If all of the following
instructions are adhered to, you will receive extraordinary dividends.
PLEASE NOTE:
Please follow these directions EXACTLY, and $50,000 or more can be
yours in 20 to 60 days.
This program remains successful because of the honesty and integrity of

the participants. Please continue it's success by carefully adhering
to the instructions.
You will now become part of the Mail Order business. In this business
your product is not solid and tangible, it's a service. You are in the
business of developing Mailing Lists.
Many large corporations are happy to pay big bucks for quality lists.
However, the money made from the mailing lists is secondary to the
income which is made from people like you and me asking to be included
in that list.
Here are the 4 easy steps to success:
STEP 1:
Get 5 separate pieces of paper and write the following on each piece of

paper "PLEASE PUT ME ON YOUR MAILING LIST."
Now get 5 US $1.00 bills and place ONE inside EACH of the 6 pieces of
paper so the bill will not be seen through the envelope (to prevent
thievery).
Next, place one paper in each of the 5 envelopes and seal them. You
should now have 5 sealed envelopes, each with a piece of paper stating
the phrase "PLEASE
PUT ME ON YOUR MAILING LIST.", your name and address, and a $1.00 bill.

What you are doing is creating a service. THIS IS ABSOLUTELY LEGAL!
You are requesting a legitimate service and you are paying for it!
Like most of us I was a little skeptical and a little worried about the

legal aspects of it all. So I checked it out with the U.S. Post Office
(1-800-725-2161) and they confirmed that it is indeed legal!
Mail the 5 envelopes to the following addresses:
1) J Roth
2901 Barton Skyway 3406
Austin, TX 78746
2) Jesse James
1778 Swift Ave.
Ventura, Ca 93003
3) Andrew L
P.O. Box 84
Cardinal, VA 23025
4) D Scarbrough
1967B Wheatland Avenue
Springdale, Arkansas 72764
5) K Clark
92-620 Makakilo drive

Kapolei, Hawaii 96707
STEP 2: Now take the first name off the list that you see above, move the

other names up (5 becomes 4, 4 becomes 3, etc...) and add YOUR name as number 5 on the list.
STEP 3: Change anything you need to, but try to keep this article as close to original as possible. Now, post your amended article to at least 200 newsgroups. (I think there are close to 32,000+) All you need

is 200, but remember, the more you post, the more money you make!
This is perfectly legal! If you have any doubts, refer to Title 18 Sec.

1302 & 1341 of the Postal lottery laws. Keep a copy of these steps for yourself and, whenever you need money, you can use it again, and again.

PLEASE REMEMBER that this program remains successful because of the honesty and integrity of the participants and by their carefully adhering to the directions.
Look at it this way. If you are of integrity, the program will continue

and the money that so many others have received will come your way.
NOTE:
You may want to retain every name and address sent to you, either on a computer or hard copy and keep the notes people send you. This VERIFIES

that you are truly providing a service. (Also, it might be a good idea to wrap the $1 bill in dark paper to reduce the risk of mail theft.)
So, as each post is downloaded and the directions carefully followed, five members will be reimbursed for their participation as a List Developer with one dollar each.
Your name will move up the list geometrically so that when your name reaches the ..1 position you will be receiving thousands of dollars in CASH!!!
What an opportunity for only $5.00 ($1.00 for each of the first five people listed above)
Send it now, add your own name to the list and you're in business!
---DIRECTIONS ----- FOR HOW TO POST TO NEWSGROUPS----------
Step 1)
You do not need to re-type this entire letter to do your own posting. Simply put your cursor at the beginning of this letter and drag your cursor to the bottom of this document, and select 'copy' from the edit menu. This will copy the
entire letter into the computer's memory.
Step 2)
Open a blank 'notepad' file and place your cursor at the top of the blank page. From the 'edit' menu select 'paste'. This will paste a copy

of the letter into notepad so that you can add your name to the list.
Step 3) Save your new notepad file as a .txt file. If you want to do your postings in different settings, you'll always have this file to go

back to.
Step 4)
Use Netscape or Internet explorer and try searching for various newsgroups (on-line forums, message boards, chat sites, discussions, etc.)
Step 5)
Visit these message boards and post this article as a new message by highlighting the text of this letter and selecting paste from the edit menu. Fill in the Subject, this
will be the header that everyone sees as they scroll through the list of postings in a particular group, click the post message button.
You're done with your first one!
Congratulations...THAT'S IT!
All you have to do is jump to different newsgroups and post away, after

you get the hang of it, it will take about 30 seconds for each newsgroup!
REMEMBER, THE MORE NEWSGROUPS YOU POST IN, THE MORE MONEY YOU WILL MAKE!! BUT YOU HAVE TO POST A MINIMUM OF 200
That's it! You will begin receiving money from around the world within days! You may eventually want to rent a P.O.Box due to the large amount

of mail you will receive. If you wish to stay anonymous, you can invent

a name to use, as long as the postman will deliver it.
JUST MAKE SURE ALL THE ADDRESSES ARE CORRECT.
Now the WHY part:
Out of 200 postings, say I receive only 5 replies (a very low example).

So then I made $5.00 with my name at ..5 on the letter.
Now, each of the 5 persons who just sent me $1.00 make the MINIMUM 200 postings, each with my name at ..5 and only 5 persons respond to each of the original 5, that is another $25.00 for me, now those 25 each make 200 MINIMUM posts with my name at ..4 and only 5 replies each, I will bring in an additional $125.00!
Now, those 125 persons turn around and post the MINIMUM 200 with my name at ..3 and only receive 5 replies each, I will make an additional $626.00!
OK, now here is the fun part, each of those 625 persons post a MINIMUM 200 letters with my name at ..2 and they each only receive 5 replies, that just made me $3,125.00!!!
Those 3,125 persons will all deliver this message to 200 newsgroups with my name at ..1 and if still ONLY 5 persons per 200 newsgroups react I will receive $15,625,00!
With an original investment of only $5.00! AMAZING! When your name is no longer on the list, you just take the latest posting in the newsgroups, and send out another $5.00 to names on the list, putting your name at number 5 again. And start posting again.
The thing to remember is do you realize that thousands of people all over the world are joining the internet and reading these articles everyday?, JUST LIKE YOU are now!!
So, can you afford $5.00 and see if it really works?? I think so...

People have said, "what if the plan is played out and no one sends you the money? So what! What are the chances of that happening when there are tons of new honest users and new honest people who are joining the internet and newsgroups everyday and are willing to give it a try? Estimates are at 20,000 to 50,000 new users, every day, with thousands of those joining the actual internet.
Remember, play FAIRLY and HONESTLY and this will really work!!!

I am about to purchase a cobra cb and the guy at the shop said
something about alignment. Is this just another way of doing the old
"peak and tune" thing that I've heard a lot of folks advise NOT to do?
Because I was just going to use it as is right out of the box with no
mods due to the often mentioned "dirty" electronics that result from
shop modifications. Or is alignment something else?

In Steveo's post Jun 18,6:09am it shows
"Steveo's" Jun 18,6:09am
-Show quoted text- This is in blue
Hellow, he's using googles interface. I think there is an option to
show quoted text while using their web reader but i'm not for sure how
it's done. This was in black

Adown arrow Reply All in blue

I m trying to get that first "-show quoted text- so I don't have to do
a "copy of the statement and add a lot of extra reading and it gives a
person a way to get ack to original message if a reader wants to see
the original text.

Thanks

I don't know if it is the same or not but I would recommend that it be checked out to see what the wattage going out is and what the modulation is doing. I picked up a Realistic and it was only putting out 2.46 watts and about 50% moduclation and would not get out at all. I started with a single no-name Huslter copy, went to single Hustler, twin Hustler, to twin Tram Penetrators and really never made one whit's difference in getting out. I bought a Uniden, he put in on the meters, turned watts to 4, mods to 100% and it'll blow the doors off of rigs within 8-10 miles if that roar is not in there.

> ratings...

Explain to me how you can do 100 watts deadkey out of a 100 watt amp
and get 400 watt peak-to-peak swing out of it?

AM has a 4:1 ratio of carrier to modulation. That means that for 100%
modulation, the peak instantaneous power is 4 times the unmodulated
power. Since amps are rated in peak power (usually DC input power),
you need to put your deadkey at 25% of the maximum for the same reason
that amateur radios that claim 100 watts of SSB power only do 25 watts
of AM.

May I suggest the ARRL handbook at your local library as a primer?

at 50 ohms impedance it will work just fine, but the diameter is .625, a bit uncommon. Check to see that you can get connectors at a price that doesn't undo the good price you found for the coax.

Alignment usually means setting up the oscillators so that the frequency and wattage/modulation are correct. I believe the term comes from the good old days, when radios had paper or metal cards marked with the frequencies that had to be aligned mechanically with the dial markers.

"Peaking and tuning" is not in itself a bad thing; there are a lot of ways to do it, and not all of them are correct. Even if you are bending the 4W carrier limit, you still want to make sure your modulation is correct, and that you are on frequency, because this will make your received signal stronger and clearer at any power level. I've seen hacks tune radios up to 100W carriers without setting the modulation correctly, resulting in a radio that transmits a very strong but nearly silent signal for miles and miles.

The other possibility is that he's trying to get some extra bucks out of you. I know the guy at the local CB shop here, and he aligns rigs for free if you buy them from him.

Didn't go that route. Went out the Vanwyck (spelling) across
the Whitestone, to 95 (think that was it) south to GWB, then Interstate
80 west. Cost for Whitestone $4.50, GWB $6.00.

Anyone every heard of a device that would override
the speaker of a stock stereo from a CB?
Something that would cut out the sound from the
stock car radio and put the CB sound into the stock speaker
Thanks in advance

I agree. Your only supposed to sell that kind of modified radio
gear on e-Bay and/or the 'Swap-and-Shop' section of QRZ.com
to hams or boaters who would pay that kind of money for a "jeeped-radio".

Very common complaint
Poorly designed asian stereo systems commonly lack proper RF bypass.
Install some clamp on inductors on the power leads and put .01uf caps to
ground on your speaker leads

It sounds more like he wants to run the audio from his CB through his
stereo.

Leaving JFK/NY city at 6:00pm at night is not much different than
getting out of San Francisco at the same time. I was in Stroudsburg
by a little after 8pm, getting some groceries and grabbing a bit to
eat, so It wasn't so bad. Just the rain that hit just as I was getting out
of the airport was so bad that I couldn't see with the wipers on full.

Most of the alignment involves the PLL. As Dave said, a good frequency counter can do the trick. It takes little time.

If it is free, than go for it. But most charge $20-25 for that and to set your DK and ALC. So in many cases, yeah, it's a way to get extra bucks.

I was thinking of getting a amp for 10 meters, but why do that when I am
geeting an HF rig in the fall. Seems I can get out no problem with the little
power I have now. 100 watts from an HF rig should get me around the world.

What you are asking for is either a car stereo that has an input that will offer that option, but I don't think you will find one. Or you need a device that switches from the car stereo to CB when it is active. This will involve rewiring the output of your car stereo.

there are devices that you can get to play the audio from your CB to the car stereo, but they don't mix listening pleasures. I use one with my ham rig often. It transmits on one of the FM broadcast band frequencies in stereo. I plug it in my headphone jack and the car stereo picks it up. It will work for about 30 feet or so in the house.

Belkin makes it and it is available at Walmart.

Vinnie i have three I-Max 2000 That the center section cap flashed over causing very bad TVI SWR ok. I cut them open and that is what i found. They worked ok with the RCI 2990 But when i used the X Force 612 hd the center section cap would flash over and carbon track.
I do not know what this cap is for
I asked on this group but couldnot get any help. I run the amp at 500 w and pep 1000. I have ordered a WOLF point 64 11 M. No coils or caps to burn out.
When I get time I am going to elimenate the cap and see what happins.

I would *not* recommend bypass caps on speaker leads. Today's solid state
amps can enter feedback with bypass caps on speakers and reduce that stereo
to an expensive doorstop.

A bypass on the dc input would be fine as would the ferrite clamp-ons.

Absolutely, Vinnie

You don't need a kilowatt. If conditions are so bad that 100 won't do it, you won't hear the 100 watt stations calling you back if you run the killer-watt ;)

Huh? He said 100 watts, not 400 and he didn't mention swing at all.

Jay is right about the power end of it. If an amp is not rated anything
other than "100 watts", it would be smart to assume it is 100 watts output
maximum. That means 100 watts on FM or CW or any digital mode, but ssb
would be 100 watts pep as would AM. In the case of AM, that means a 25 watt
carrier (to end up with 100 watts pep).

Actually there are some car stereos with external inputs (either 1/8
trs on the face or RCA from the back) for things like Ipods. I have
one of these and use it for my palm, and plan on making an adaptor for
various radios when I get around to it (god knows when that'll be).
This would work, but the FM transmitter would be simpler, since a
stock stereo probably doesn't have the extra input.

With either method, be careful not to run the full speaker output into
the device. Both the FM transmitter or the extra input will accept a
low level feed, like what drives headphones. Using an "external
speaker" jack can possibly damage the FM transmitter/stereo input as
the level feeding the speaker is much higher. Experiment with a

resistor or two inline to drop the voltage to a more reasonable level.

Have fun.
Ben

Yeah, but you know he is a sissy coward who travels around taking
pictures, that's all. He said how he was gonna whup on AKC at Dayton
and the sissy didn't even show up. He's a coward who talks junk, that's
all. The bottom line is that mopathetic can't make any difference in
the AKC control of this NG, and his futility eats him up.

Inserting reactive components in the antenna has the effect of lengthening or shortening the electrical length of the antenna. IF the antenna is physically less than a quarter wave an inductive load is added anywhere between the feed point and the end of the antenna to effectively make it a quarter wave antenna electrically. Capacitive loads do the reverse. They take physically long antenna, > a quarter wave, and shorten them electrically.

All reactive loads alter feed point impedance and the "Q" or bandwidth of an antenna. If my memory serves me correctly the IMAX is essentially an end fed 5/8 wave antenna. FOr Solarcon to use the same feed system that they do on the A99, they must raise the feed impedance. This can easily be done by inserting a capacitor anywhere in the antenna. Preferable this should be about a 1/4 from the feed point. That is where the current in the antenna is at maximum. The volatge the the cap must withstand is a minimum.

Removing the cap will most likely screw up the matching of the antenna.

The Grant is a 40 channel radio is it not? I wasn't for certain when I bid on it. Got it for Less than $120.00 with original mic. Picked up a GE 40channel with a 150 am/usb/lsb amp for less than $140.00. Bought the GE for the amp to go along with the Uniden President grant. Will have the GRant expanded later on I think. Not for certain. If it is a 40 channel will probably leave it completely alone. The box shows not to have been opened but one could steam the tapes off and then re-attach them. I am going to use this mobile as a base station. I have an SBE Console II that I was going to have a VFO mounted but I have less money in the Grant, sepecially if it is a 40 channel radio than I would by having to send the SBE off to have it worked, tweaked and peaked upon. I have a Uniden PC 68 Elite am 40 channel only, 7 weather stations that I have in my truck hooked up to twin Tram Penetrators. It really will walk and talk. It is not putting out too many watts cause I do have a linear in line but haven't used it but a couple of times when trying to talk local with it. I have talked from North Central TX to NC and Tennessee barefooted so I am pleased with the setup. The CB tech told me that I would be better off by running a battry cable from my toolbox down to my frame for a good ground. The box is really wide and deep and has to sit on top of a 2x4 to keep it from sitting lopsided on the fenderwells in the bed of the pickup. That is how far back the box goes. Sits about 4inches into the fenderwell. Bought it for a "trunk" on a car. Will handle tools, tool boxes and 3 family suitcases in it.

Exercpted from The KY4KY News : http://ky4ky.com/fyi.htm

(6/19/05) Floating Freeband (FM) Repeater On * 27.620 *

If you hear what sounds like a repeater outputting in the spectrum
between the 11 meter class D citizens band and the 10 meter
ham band, it's not an illusion. Rather it appears to be the creation
of some enterprising Freebanders who are operating this
latest, unlicensed repeater.

According to several reports received by Newsline, and others
posted to various Internet websites, the system in question
outputs on 27.620 MHz FM. It also seems to be located
not far from Pennsylvania's eastern most border.

But there is the interesting part. While it's not yet been
verified, the word on the street is that the input kind of floats
around the low end of the 10 meter ham band. There is some
speculation that the operators of this repeater monitor
the input frequency and move it when ham radio operators
running legal high power Morse come on the air on top of it.
At least there have been reports of strange announcements
which may be information to users as to where the input will next be found.

One Internet post describes this machine as one of a new
breed of Freeband roving repeater of the type first noticed
in the St. Louis area about two years ago. That is, those
who run these systems are physically moving the frequencies
and the geographic location of the machine to avoid detection
by ham radio T-Hunt squads and the FCC.

This is just the latest report in a string of 11 meter repeaters
that go way back to the early 1970's when
Freebanders - then called H-F'ers -- began tying together old
crystal controlled 11 meter AM transceivers as repeaters.
Most had outputs on channel 1 or 2 and inputs on CB Channel 40
or above. None worked very well and most were soon abandoned.

Note: We heard the "27.620 Machine" just before noon today in SE MO.
No word yet of they have a "QSL card address", although if they do this
\would be a RARE CATCH to confirm.

755. an oldie but goodie

I found this spinning around on my hard drive:
(and it's still true today)

Subject: (no subject)
Date: Sat, 7 Sep 2002 17:32:45 +0000 (UTC)
From: Anonymous User <anonymous@remailer.havenco.com>
Organization: mail2news@nym.alias.net
Newsgroups: rec.radio.cb

Subject: Dougs Radio and Usenet Pledge for AKC members

I disburse obscenity with redundant banality. Emails I have plenty of,
authentic and phantom both.
I manage this well, sometimes crossposting my mundane matter to several
newsgroups to loathe.
I want and wish only to take your band-width with my helpless and impotent
rants,
while you are stuck holding the bill by downloading my garbage,
you see, its all in my plans.
My foes are many, and none would be blamed or held accountable if they were
to crack my skull,
after all the threats of violence I have made against you, but they were
never dull.
I cant stand to lose an argument or even a debate,
even though I am quite used to it and always filled with hate.
Valid points when called to my attention are
are so often redirected, this prevents the world you see, from seeing me
corrected.
My education may be ok, even somewhat impressive,
but it consists of only things I see,
I cant always cope with reality.
I discuss only that which can feed my
wounded ego, to go above and beyond, I just may strain and blow.
The bile I project forth is funny, under the guise of sometimes-assistance,
and all are well aware, what really gets me mad, is myself-imposed
impotence.
If I were to gain a life as most suggest, I wouldnt be here daily, putting
myself to the test.
If only dad werent an abusive drunk, I could have been a smarter lunk.
If only I knew how to cope I wouldnt be such a dope.
If only I wasnt such a coward, I may have a lover by a name other than
Howard.
If only I really liked myself and didnt slash my wrists, I might even have
been successful and found everlasting bliss.
If I could learn to hold my tongue or become a bit more grammatical,

I wouldnt come across as such an ash-hole fanatical
who is always problematical.
If only I could learn to hold an intelligent debate, would I still be a
pussy behind a keyboard, that all have learned to hate?
If only you could understand what caused me to be this mess, my secrets they
run very deep, to the point I wear a dress.
I dont mind being a cbers pet, normal people dont always sit around, always
on the internet.

Piggy-back my post.

Put in bay or Kellys island are fun, right on the Lake. I'd say Kelly's with your young'in along. It's more family oriented..put in bay is for getting drunk off your ass...and forgetting what the hell happened last night.

Google cedar point, or put in bay, or kelleys island. Those are all -really- close to cedar point, and loads -o- fun.

763. Re: 27.620 FM Repeater heard ! (new rare 'DX catch')

The Charleston and Little Rock freeband repeaters are linked
to business band repeaters and a seldom used ham repeater in one
case. There is a set up in Nashville where a repeater is cross
linked to repeaters in three other radio services.

OK.....

What SPECIFIC FREQUENCIES do they operate on then ??

Please provide your list of the same or a URL with info on the same.

Thanks!

Not with 100 dinkers. (is it in a field of dead pines?) :)

At any rate, that may change the antenna's function a bit. (?)

I'm still concerned about the lightning strikes. Your mast is
living plant material.

But it's not as high as many of the live, wet trees. I think I am ground pretty
good, just by the quietness of the radio. I don't hear any static at all.
Everything is super quiet.

Anyway, I am going to eat a bag of chips before I go to bed.

Good night !!!!!!

Vinnie S.

Most unfortunate that you had to respond this way because I ended up repairing the radio myself today. There were 6 burned out tuning cans. Just to find out the exact inductance/ capacitance values of each can, I disassembled all 6, determined the exact number of primary/ secondary turns, plus the parallel capacitance value, and then reassembled with the new windings. I now have official values for L4, L5, L6...., etc for the Uniden Grant so that ferrite toroids could actually be substituted in the future. I was considering sharing this information with the group because it took me nearly a day to disassemble and unwind the tiny coils. However, after the response I received, I will not be sharing the info. You are probably running one of the latest export rigs, which generally don't perform as well as the "narrow band" Grant, which makes the Uniden a keeper. So be it.

I bid you farewell so that you may return to your domain.

Jack Pederson

Thanks for the info, but I was seeking alignment data. I'll be able to figure it out myself I guess, but hoped that the job would be simplified with instructions. BTW, although I tried peeking and clipping, etc, in the past, I found far better performance simply by installing an audio compressor/ expander just like the radio stations have. Modulation doesn't exceed 100%, but almost always remains at 100% when the compressor is active. Much less trouble with the neighbors that way.

I did a channel 9 relay once..the fuckers at the coast guard station couldn't understand the concept of a directional antenna, good ears, and an amp as needed. These two guys were off avon point when they ran out of gas, and here in Ohio they will write you a big ticket for that on the water. (rightly so) and they didn't want me to say they were out of gas.

Long story short, the Eagle 515 hooked the boater up to the marine towing company thru my landline.

We would -NOT- have heard each other without the antenna and amp.

Thanks for making me recollect that, Enzo.

Hello, Mopar

I dunno. HBO, Cinimax, Stars, and a lot of others. I guess that "they" are
right about gravity.

73 from Rochester, NY
Jim

Real poster?

Check whatever you wish. I'm having some "discussions" with a few folks.
It is too sad, but you don't understand what is happening. Certain folks
that are in power are trying to tell you that other folks are out in "left"
field. The problems are coming home to roost. Watch the gas prices. Did
you see the weapons of mass destruction? It will likely take you some time
to figure it out. I sincerely hope you have an I.Q. that is more than
modest double digits.

BTW, try not to send posts to more than 2 or 3 groups; it is not proper
ettiquite.

73 from Rochester, NY

Start with this one; http://www.cbcintl.com/
Many articles where written for 73 Mag some 20 years ago on converting
Hy-gain type CB radios to 10 meter FM.
I have them all but it would be one heck of a job to scan.
Let me know if I can help.

The Charleston and Little Rock freeband repeaters are linked to business
band repeaters and a seldom used ham repeater in one case. There is
a set up in Nashville where a repeater is cross linked to repeaters in
three other radio services.

>OK.....

>What SPECIFIC FREQUENCIES do they

>operate on then ??

LMAO,,yea,, right!

>Please provide your list of the same or a URL

It would be easier to find a 2950 then to convert a radio and be stuck
to "channels" in a VFO band.

Hi Jack,

Most of the mods are pretty simple and with the right radio involve simply changing a crystal. Not even that with some of the 02a's as the binary codes will easily reach 10 meters.

Now, if you want a challenge, try taking a CB down to 20 or 40 meters. Now you have to know some circiut fundamentals!

Good luck,
Al

"I still use my Cobra 148 GTL on 20 meters."

It was the PLL02a mods I was really interested in. Does anyone have the
details?
I'll work up to "challenging mods" in time :o)

Jack

i used to make up the eprom boards to mod the old cb's
still have the artwork for em so i can run you off a pcb for the 02a
even send you the eprom mod book in pdf if you like

My mother in-law. Funny, they flew back to Ca. the day I
flew into JFK, after they were visiting their Son & his wife (Whom
I stayed with while there on business). She's ok now, but it
was a scare for a couple of days (possible stroke).
Enough of this, what the heck is going on? Ready to kick
back and drink a couple for the weekend?

Have a great Day Mopar.

Landshark

Love my Beam!

And an empty Beam bottle makes a dangerously accurate aiming device :)

Try it!!!

Chad

From: John Smith <assemblywizard@gmail.com>
Message-ID: <nOVue.9$so5.1406026@news.sisna.com>
Source record: 201713

Jim:

I have never seen an amp rated both 100 watts am and 100 watts ssb. By nature a ssb signal is only half the bandwidth (roughly) of an am signal.

I have an old CMI linear I have ran since 1975--100 watts am but 165 watts ssb p-p. I have found most amps to fall relatively close to ratings, if a 100 watt amp.

I have looked at the new amps and they components are truly pushed to the max. I would think they must run HOT!!!

On an am signal, the power out should remain relatively the same with and without audio. "Swing kits" cause the rf out to vary--but why, unless you are driving components above their ratings and need to avg the power out. A true 100 watt amp should hold a fairly steady 100 watt output on AM from key down to key up.

Some freaks out there just like to see a meter "swing" like ssb causes--so they either go a swing kit or a variable power xmitter which allow rf increases on peak audio--in some ways it reminds me of a childs toy.

John

K1MAN SAYS:

FCC ISSUES A $21, 000 NOTICE OF APPARENT LIABILITY AGAINST K1MAN

In a "NAL" released 7 June 2005, the FCC has opened a pandora's box, according to Glenn Baxter, Manager of IARN, the International Amateur Radio Network, and AARA, the American Amateur Radio Association.

Mr. Baxter was recognized by the State of Maine legislature on March 13, 1991 and named as a Vermont Academy Distinguished Alumnus on October 1, 1993 for international amateur radio communications work with his IARN.

Mr. Baxter says that this whole charade is being driven by petty ham jealousy and the blatent incompetence of ARRL in failing over the years to come even close to the work of IARN in emergency communications work.

Mr. Baxter welcomes these court actions since he has been trying to "face off" with the Commission for over 15 years. "Many heads are finally going to roll," acording to Baxter. K1MAN's response is printed below together with the full text of the NAL.

In the matter of
Glenn A. Baxter, P.E.
Registered Professional Engineer

heheh...we have a contact at the event who has copies of
chukkeesukkee's gun threats to people. As far as mopathetic goes, he

and chukkee will be too busy at the local porno store to do much at the fest.

By the way, twitlips...don't swallow whole all of chukkee sukkee's words. He has not been to Findlay in 2 years.

Twitleips the FUGGLY renter whined effeminately:

"It falls on Sept 11 this year. You just changed the mentally deficient's N8's plans for Findlay. It's a shame, really, as pics of n8 after Mopar-wmds raining down on his parade would have been priceless. Do you have a contact for the organizers event?"

AKC sparklingly replies, with faultless logic and customary aplomb:

HA! Mopathetic didn't even show up at Dayton. AKC was there, mopey made threats for 2 months or more before Dayton and then wussed out and stayed home. Hmmm...maybe he stayed home cuz chukkee the phony Christian lied when he asked his mommy for gas money and went to Medina rather than Dayton like he said. AKC bets that is the truth of the matter.

FYI, ChukkeeSukkee...Christians don't make death threats.

The commission is a very "leaky" organization, and my source
tells me a certain manager is, putting it mildly, furious that the
K1MAN NAL was issued. Look for one or more very quiet
early retirements and/or resignations.

Hello,

I purchased a President Lincoln/Ham Radio from Ebay for 230 Euro/
283-00 USdollars
It was listed by the SELLER as been an EXPORT version 26 to 30 mhz ,40
watts am,fm and 45 watts usb,lsb
I chacked with Uniden In The States that used to make this radio I
gave them the serial number they said it was made back in wait 1984 yes
21 years old talk about over used??

I dont know where I stand with Ebay as regards returns how can I check
this Cb radio out??

I will be doing it tommorrow when I buy a Power supply unit, antenna
and swr meter too.

If not abused most semiconductors will work up to ten to fifiteen yrs
in continuous operation. Best scenario is if it meets your
satisfaction and transmitt intended power then it is worth it.

838. Petition to Deny Renewal to K1MAN

Newsgroup: rec.radio.cb
Date: 2005-06-24 21:40:37 UTC
From: policy-ham <hamop_62@hotmail.com>
Message-ID: <1119649237.556139.108330@g43g2000cwa.googlegroups.com>
Source record: 201725
Cross-posted to: rec.radio.amateur.policy,rec.radio.amateur.misc,rec.radio.shortwave,rec.radio.scanner,rec.radio.cb

Do any of you know about this on line petition to the fcc
to stop them from renewing the ham license of K1MAN? I found
it on eham.net.

L.L.

Petition to Deny Renewal to K1MAN:
Brian (K3VR) on June 15, 2005

By now, you've probably heard that K1MAN has received a large NAL
(fine) from the FCC, for Broadcasting, Wilful Interference, Lack of
Station Control, Failure to File Required Information, and Pecuniary
Interest.

Even if K1MAN were to pay this NAL, there is no guarantee that his
obnoxious behavior will change. If he were to lose his license, and yet
still continue to transmit, at least the Government could seize his
equipment.

The fact is, K1MAN has received lots of letters from the FCC over the
years and nothing to date has stopped his trashing of Amateur Radio.
For this reason, I believe he should permanently lose his license to
transmit over amateur radio.

As it happens, K1MAN's license is due to expire on October 17th. The
FCC already has a procedure in place where we, and the rest of the
listening public, can make our voices heard regarding K1MAN's license
renewal.

I propose we use the FCC's standard procedures to file what's known as
a "Formal Petition to Deny Renewal." Basically, the petition would be
signed by all of us who believe K1MAN's license should NOT be renewed.

As it happens, there is a website being written right now to accomplish
this task. The "Petition to Deny License Renewal to K1MAN" is in the
process of being written by Keith Lamonica (W7DXX).

Based on K1MAN's on-air behavior, we will ask that the FCC not renew
K1MAN's license this fall. I've already begun collecting comments.

All you need to do is indicate in writing, that you believe K1MAN's
amateur radio licenses should NOT be renewed.

Referencing his NAL letter, send your comments to:

Brian Crow
2550 Mosside Blvd

Suite 212
Monroeville, PA
15146

Include your comment in favor of the petition to deny license renewal to K1MAN, along with your name, callsign, address, signature, and a daytime phone number for verification.

Your comments will be submitted to the FCC along with the petition. Even a postcard with the required information will do it. If you have a lot to say, send me a letter.

Please join me in supporting this Formal Petition to Deny License Renewal to K1MAN. We need YOUR comments!

The website and petition, now in progress of being completed, is located at:

http://www.no2k1man.com/

Thanks for your support!

The Supreme Court just ruled that the government can TAKE YOUR HOME
and hand it over to a commercial developer based on NOTHING MORE than
the claim that it can generate more tax revenue as commercial property
(Kelo v. New London). Maybe Dave will come out of hiding and make up
some excuses to defend this latest example of his neocon fascism.

Hello, Frank

I'm not at all surprised. They should remove folks' homes; after all, they might find the missing weapons of mass destruction.

Better give some bigger tax breaks on SUVs. Notice how cheap gasoline has been getting?

I see one or two generals have been making some noise. Better can them as Rumsfield says everything is just dandy "over there".

Best regards from Rochester, NY
Jim

L.L.
Petition to Deny Renewal to K1MAN:
Brian (K3VR) on June 15, 2005
By now, you've probably heard that K1MAN has received a large NAL (fine) from the FCC, for Broadcasting, Wilful Interference, Lack of Station Control, Failure to File Required Information, and Pecuniary Interest. Even if K1MAN were to pay this NAL, there is no guarantee that his obnoxious behavior will change. If he were to lose his license, and yet still continue to transmit, at least the Government could seize his equipment.
The fact is, K1MAN has received lots of letters from the FCC over the years and nothing to date has stopped his trashing of Amateur Radio. For this reason, I believe he should permanently lose his license to transmit over amateur radio.
As it happens, K1MAN's license is due to expire on October 17th. The FCC already has a procedure in place where we, and the rest of the listening public, can make our voices heard regarding K1MAN's license renewal.
I propose we use the FCC's standard procedures to file what's known as a "Formal Petition to Deny Renewal." Basically, the petition would be signed by all of us who believe K1MAN's license should NOT be renewed.
As it happens, there is a website being written right now to accomplish this task. The "Petition to Deny License Renewal to K1MAN" is in the process of being written by Keith Lamonica (W7DXX).
Based on K1MAN's on-air behavior, we will ask that the FCC not renew K1MAN's license this fall. I've already begun collecting comments.
All you need to do is indicate in writing, that you believe K1MAN's amateur radio licenses should NOT be renewed.
Referencing his NAL letter, send your comments to:
Brian Crow
2550 Mosside Blvd
Suite 212
Monroeville, PA
15146
Include your comment in favor of the petition to deny license renewal to K1MAN, along with your name, callsign, address, signature, and a daytime phone number for verification.
Your comments will be submitted to the FCC along with the petition. Even a postcard with the required information will do it. If you have a lot

to say, send me a letter.
Please join me in supporting this Formal Petition to Deny License
Renewal to K1MAN. We need YOUR comments!
The website and petition, now in progress of being completed, is located
at:
http://www.no2k1man.com/
Thanks for your support!

_
I don't know who k1man is but as soon as someone plays the "we need to
silence him" card, I'm inclined to take the opposite position. In fact,
I'm going to write my own letter to the FCC and telephone with my
personal thoughts. Perhaps if this k1man was going to hire an attorney,
a defense contribution fund could be set up. I'd send the first dollar.
Each time the post is made by the crybaby in Monroeville near the
Miracle Mile, the defense fund address should also be posted. Now,,what
exactly did this k1man person, do? And what the hell is it with people
in Pennsylvania regarding radio and the internet always wanting to get
in other people's business?

.. and somewhere in the world another freebander is born...
John
-
You know, you're absolutely right. Not to mention how many it might
prevent from even going after a license in the future, after reading
about such stuff. I know a hammie dude in Largo who just moved there
from Buffalo, NY. He's a welder by trade and does his share of
freebanding and claimed he hasn't jumped on any of the hammie freqs
since moving from NY. He said he's letting his license expire. Why not?
His voice is fresh as a daisy 'round these parts and he digs the
incognito for the freeband. Said he hasn't had this much fun in years as
he didn't dare key up the freeband in his neighborhood in NY, as much as
he wanted to..

I recently purchased a President Lincoln CB radio for 230 Euros it
arrived this morning I checked its serial number with Uniden they stated
it was made way back in 1984 !!
Is this radio too old?
It was supposed to be an Export Version and hipower unit too??
What do people think on here thanks
Sandra

–

Methinks in 4 more years, you'll have an antique radidio...seriously, as
long as it was new (shrug)...maybe you got a better deal. Dunno much
about the Lincoln radios. Shouldn't be too difficult to research,
though.

Ahh,,it was a feebay purchase,,hmmm,,that kind of changes the parameters a bit. Standing rule on feebay,,,,buy at your own risk. Does it work? If you don't like it and it at least works, perhaps you can relist it yourself and get your money back.

From: channel391@juno.com
K1MAN SAYS:
FCC ISSUES A $21, 000 NOTICE OF APPARENT LIABILITY AGAINST K1MAN
In a "NAL" released 7 June 2005, the FCC has opened a pandora's box,
according to Glenn Baxter, Manager of IARN, the International Amateur
Radio Network, and AARA, the American Amateur Radio Association.
Mr. Baxter was recognized by the State of Maine legislature on March 13,
1991 and named as a Vermont Academy Distinguished Alumnus on October 1,
1993 for international amateur radio communications work with his IARN.
Mr. Baxter says that this whole charade is being driven by petty ham
jealousy and the blatent incompetence of ARRL in failing over the years
to come even close to the work of IARN in emergency communications work.
Mr. Baxter welcomes these court actions since he has been trying to
"face off" with the Commission for over 15 years. "Many heads are
finally going to roll," acording to Baxter. K1MAN's response is
printed below together with the full text of the NAL.
In the matter of
Glenn A. Baxter, P.E.
Registered Professional Engineer
-
Was the agent that little dick-with-ears in Texas?

The commission is a very "leaky" organization, and my source tells me a certain manager is, putting it mildly, furious that the K1MAN NAL was issued. Look for one or more very quiet early retirements and/or resignations.

_
The FCC is so screwed up. Their website has shit on it from the nineties that they haven't bothered to update.

Hey, I saw that, too! The first thing that popped into my mind was,
"How long till Rumsfeld plonks -these- guys?"

BTW, I've been waiting to see that Frontline episode about Rove but I
don't think they aired it here in Conservativeville. Fortunately it's
on the net:

I think YOU'RE burnt out! Do you not UNDERSTAND how eBay works? Have
you ever heard of the concept of caveat emptor?

> > Besides, why would I want to pay double for a radio at RatShack?
> >
> They still make radios??

No, they sell phones at PhoneShack (tm).

I still remember the look on the sales droid's face when I walked in and was asked if I wanted to buy a phone. I told him no I want to buy a radio. He got even dumber looking when I asked for an HT that was now on clearance. I found my HTX-420 at another store. I only wish their radios had better intermod filters. I've sold all my HTX mobiles and my MURS radio because I can't use them under this damn RF filthy tower I live under. The HTX-420 can't hear shit on 2 meters and almost works on 440. Once I get some distance from the tower, it's a very sensitive HT. My IC-2100 works great on 2 meters and MURS with even better ears and more power!

And yes, my CB is still hooked up to a 2x455 amp. One has to be heard! I guess I could use my 2950, but I have no code, so why tease myself.

Anybody know what the difference is between a .6 conical and an elliptical stylus for linear tracking turntable. Anyone got the manual for a LAB-2200 (42-2916) RS turntable? How about the cartridge number. The RS site doesn't have this info anymore.

I've found the stylus is an ATN102P, but also found listings that say ATN102EP/112EP/122EP will fit also. They are different stylus sizes and shapes. What's best?

"...Had this been an actual emergency, would you have
been able to set up all that equipment in a hurricane
or a flood or major snowstorm?"

Preparedness my ass. They've been planning this for the past month.
Sending emails back and forth on reflectors, testing the generator,
gathering radios and antennas, making food plans.

I want to see how they do in lets say, an earthquake!

Baxter lives in Massatoosets, or is it Massatoochits? Or in Massa Two Tits?
Any way you cut it, however you spell it, Glenn and his Blabfests are
hopefully going to be a thing of the past.
It will be interesting to see if Baxter will go down with both guns blazing
as he cohosts with arrogant Richard Whiten, ex WB2OTK and fellow jammer by
his side.
That $21,000 fine is sure to put a dent in his coffers, even for a
"professional engineer" of his self-proclaimed high standing.
Hey, Glenn. Ever entertain the idea of initiating a legal defense fund? I'll
donate two cents.

Hi Jack,
It is possible, I did convert a few of the 02 PLLs in years gone by,
I will look in my archives and see if I still have the instructions on file, may take a few days tho'
I used to use the Electrophone CB and I think after the mods they could cover a fair part of the 10m band.
Will get back to you.
HH

ROGER WISEMAN'S GREYHOUND MEN'S ROOM BAND
```

Lead vocal: Dr. Winston O'Boogie

It was twenty years ago today,
Roger Wiseman forced the boys to be gay
He's been going in and outa their rears
And he's made them into ravin' queers.
So watch out or I'll force on you
The act we've hated all these years,
Roger Wiseman's Greyhound Men's Room Band.

We're Roger Wiseman's Greyhound Men's Room Band,
Disciples of the Bucktoothed Choad,
Roger Wiseman's Greyhound Men's Room Band,
Sit back and watch us shoot a load.
Roger Wiseman's Greyhound, Roger Wiseman's Greyhound,
Roger Wiseman's Greyhound Men's Room Band.
It's wonderful to be here,
But Wiseman's full of crap,
The dirty goddamn pederast:
That fucker gave us syphilis,
That fucker gave us clap.

I don't really want to stop the show,
But I thought you had all better know,
That Wiseman's going to play a song,
On a stickpin that he stuck through his schlong.
So let me introduce to you
The one and only Bucktoothed Choad
And Roger Wiseman's Greyhound Men's Room Band.

I am sure that everyone here has noticed there is much too much attention paid to where posts originate from. And, there are childish personalities which look up where you are posting from--some with malicious intent...

This URL will provide you with a means to be anonymous:
http://www.antifirewall.com/news.htm

This should allow everyone to put a stop to this bad behavior.

John

The behaviour stems from a rash of forgeries that have occured in the
past few years. For a while it was necessary to verify the source of
any post before ever bothering to read it.

> And, there are childish
>personalities which look up where you are posting from--some with
>malicious intent...

Not to mention the childish personalities that use internet
anonymizers to avoid getting TOSsed for their uncivilized posts (some
with malicious intent).

>This URL will provide you with a means to be anonymous:

On the contrary, such services have a history of -encouraging- bad
behavior by giving trolls a way to hide.

Personally, I don't care who looks me up. I have no secrets.

I didn't. I did set up my portable 3 element beam and made a few simplex contacts on 2 meters. HF had to be poor because of the bad numbers. I heard little skip on 11 meters. VHF tropo was supposed to be good, but I found little enhancement when I was trying.

I am a very Horny Girl looking for some Hot Guys
with Hard Cocks as Horny and Hot as me. I want
them to Jack Off with me and to CUM with me.

I love it all like Gang Bangs, Bondage ,
Watersports, Orgies, Role Playing , Fantasies,
Crossdressers, Bi-sexual, She-males ,Oral, Anal
and Anything Nasty and Kinky !!! I have nice big
38D Tits and a very tight shaved Pussy. I want you
to Cum all over my Face and Tits.

I am also selling my worn and Cum Soaked Panties
for $15 My Worn Thongs for $15 My Worn Pantyhose
$15 Silver Metal Cock Ring for you to wear as you
Jack Off with me in 3 sizes for that Great fit
$6.99 each or 3 for $13.99 My Used Vibrators
fresh from my Wet Pussy $19.99

I don't think they made it in 1984. I think the 2510 was released in 1989. In any case, the seller is not required to say much of anything. It's you job to get answers for unanswered questions on the item.

I am pretty sure the Lincold/2510, was released around 1989 or so.

In any case, it is not the age, but use and condition. You have to learn to ask questions to the seller. You obviously can ask questions. But people here know little about your radio and it's condition.

You should have asked questions about the radio to the seller.

I just purchased a Uniden Grant LT new, ebay. Before I purchased it, I emailed Uniden to ask if the LT was different from the XL. They said that it's the same radio except for the DSC circuit and the backlight. I looked it up on the net, and all the same XL mods work on the LT. The XL were going to $250 new, an the LT were going for about $115 new.

I then asked the seller if if was new, where was the box and how did he aquire it. Explained both with clarity. He also was not a huge seller, and had about 50 feedbacks with 100%. The guy panned out, and the radio was as described, new and stock. No box.

I hate to say this, but you didn't do your homework. Learn andfrom this use this for the next time.

Actually they were introduced in the early 80's, 81 or 82.
I bought my first one in 1982, should have never sold it, best
damn radio I've ever had.

(This is from eham.net and qrz.com)
Glenn A. Baxter, P.E., K1MAM, (or as his parter and buddy Chris Murdoch, WA1HOD, calls him - K1MAN-kind) has a long long history with the FCC. For those of you just joining the debate, here is some information that might help explain why so many hams are eager to sign the Petition to Deny License Renewal to K1MAN at www.no2k1man.com

K1MAN, by his own actions, has made himself a very public figure. As a public figure, he's been widely discussed by his fellow hams here, on QRZ, and elsewhere on the internet, on amateur radio, in court rooms, discussed by his employers, his neighbors, discussed by the FCC, at CBS, and by the Department of Justice.

In reviewing the history of K1MAN and his qualifications to remain a Commission licensee, we can go back many years, to May of 1986, when he sued the advertising manager of QST and another employee of ARRL for conspiring to damage his business reputation.

QST had received a complaint that showed that Baxter's Collins Repair and Alignment Service had significantly overcharged a customer beyond an amount they had previously agreed upon.

The advertising manager at the time wrote Baxter on QST letterhead, saying, "When your service charges escalate from $75 to $225 and then to $275 we become very much concerned about the manner in which you are treating our members. You will recall that I discussed with you ... the highly suspect illegal spending of deposits which members were sending to you... unless you can convince me that your operation exists in the best interests of our members, we shall be unable to carry further advertising from you."

This exchange and the subsequent lawsuit by Baxter (dismissed) may help to explain why Baxter has attacked the ARRL and its staff with such zeal over the years. He says he wants to make IARN an "Alternative to ARRL" but, discerning readers may recognize another agenda.

Some old timers may recall Baxter's lawsuit against the FCC to maintain the old AM power output of 1,000 watts. That lawsuit was dismissed because Baxter failed to exhaust administrative remedies through the FCC before bringing suit. As the old adage goes, it appears there really is a drawback to acting as your own attorney.

You may also recall Baxter's 10 million dollar lawsuit against the FCC? He claimed he was defamed by the alleged suggestion by Riley Hollingsworth that he was shut down by the FCC. Baxter reported at the

time that he had merely taken a break to teach high school. This case was also dismissed because Baxter failed to exhaust his administrative remedies before bringing suit. Baxter has threatened to sue Riley personally, as well as other hams, including this writer. A threat that has yet to materialize.

On January 23, 2003, Walter Cronkite's attorney wrote to Baxter asking him to stop using Walter's voice ID over K1MAN's bulletin. "Mr. Cronkite previously requested that you refrain from any further use of the audiotape, or from any suggestion that he endorses your station, Association, or other operations." He (Ronald S. Konecky) went on to call Baxter's actions "a violation of Mr. Cronkite's rights, totally improper, and a cause of serious damage to his name and reputation."

Baxter's actions, have not endeared him to CBS, The Maine Department of Justice, Walter Cronkite, the FCC, or the countless hams who have complained about Baxter's relentless interference to their ongoing communications.

When Baxter began to send out his self-styled notices of Felony Affidavit Complaints to those he perceived as interfering with his bulletin service, it really hit the fan.

On January 5th, 1995, Jay McCloskey, the U.S. Attorney at the Maine Department of Justice wrote to Baxter, telling him, "It is against the law to write and mail this type of threatening communication, especially when it has no basis in fact. If you continue sending this type of letter, you may be subject to Federal criminal charges for misrepresentation and for using the mails to make threats. You may also jeopardize your amateur radio license; the FCC can use evidence of this type of conduct to demonstrate that you no longer meet the character requirements for a license."

Baxter responded to this letter on January 9, 1995 by writing to the Assistant US Attorney, stating, "Your blatant and malicious abuse of the power vested in you by the citizens of the United States is despicable, unethical, criminal and unprofessional." Baxter went on to demand a retraction, which, of course, he never received.

Baxter has hardly endeared himself politically to the members of the Maine Department of Justice, but the lack of political goodwill doesn't stop there. On January 23, 1995, FCC Counsel John Greenspan wrote to Baxter regarding an insulting letter he wrote to the Assistant US Attorney, "Your reply suggests to me that you may very well lack the character qualifications to be an FCC licensee. You certainly lack the maturity, but that is, unfortunately, not grounds for revocation. If it is ultimately determined that you have made improper threats, that determination could result in a hearing to examine your fitness to remain an FCC license and/or criminal prosecution."

John Greenspan went on to add, "Although you have not used lawyers in the past, I suggest that you consult with an attorney knowledgeable in

FCC procedures about your alleged conduct. To provide some incentive for you to do this, let me say that if you wish to speak with me for any reason, it must be through an attorney. I will not accept any calls or letters from you personally."

Not exactly a love letter is it?

Over the past 5 years Baxter has been contacted by the FCC on numerous occasions and his station has been inspected by the FCC. Baxter says he has received FOUR (4) NAL's to date. The FCC has writtent to him about allegations of broadcasting, deliberate interference, failure to identify, poor signal quality, erratic starting and stopping times, recording conversations without permission, and the list goes on...

Even Baxter's neighbors are not immune from his tendency toward trying to use the courts to settle what some might consider silly disputes that would be better handled by a personal phone call. More often than not, Baxter has lost in the courts due to procedural defects in his lawsuits. He is not, contrary to a popular myth, fabulously wealthy, or a lawyer.

According to staff at the IRS, his IARN charity did not even make enough money to require that he file taxes last year. An underfunded organization like IARN that engages in irresponsible activities like calling for jump teams to visit disaster areas who don't even request assistance, does not seem to me, to be an alternative to the ARRL, except perhaps in the mind of Mr. Baxter.

On May 4, 1983, Baxter sued a neighbor of his, Camp Runoia, a camp for little girls, because they stacked cordwood on the side of the road. The case was dismissed. The camp had removed the wood prior to the case being heard.

Baxter's other neighbors have apparently also had reason for concern regarding his allegedly threatening behavior. According to reports gleaned from court records in December of 2003, Baxter was dismissed from his job (fired) as station engineer for FM 95.3 in Augusta, Maine. When he applied for unemployment compensation, the attorney for the station advised his clients not to attend the unemployment hearing.

"Because Mr. Baxter has demonstrated offensive behavior similar to that which prompted his termination, I have advised the Bouchards not to attend Monday's hearing. I indicated to you in our conversation that the Bouchards' fear for their safety as a result of Mr. Baxter's threatening behavior. Mr. Bouchard terminated Mr. Baxter from employment when Mr. Baxter repeatedly acted in a threatening manner to his supervisor and to other employess at the job site.Mr. Baxter demonstrated his inability to act responsibly and to exert self-contol at the last hearing."

The attorney (Robert J. Stolt of Lipman, Katz & McKee) goes on to say, "Payments of benefits to Mr. Baxter is a lesser evil than someone being harmed by him."

Baxter sued regarding these comments, but the court held that the comments made by the attorney were completely privileged in nature and were therefore protected by law.

Ironically, Baxter's objections have ensured that they will reside in the annals of the Maine courts in perpetuity, for anyone with the desire to read them.

For all of these reasons, and the reasons in the present NAL, I will sign the petition to deny license renewal to K1MAN. I don't believe K1MAN is capable of engaging in good Amatuer practice, as we are all compelled by law to do.

Although I hold no malice toward Mr. Baxter personally, and I believe him when he says he suffers from mental illness, I believe that Mr. Baxter has already amply proven that he does not deserve to remain a Commision licensee.

K1MAN has pending enforcement issues. K1MAN has already been warned by the FCC that he may be referred to the ALJ due to ongoing enforcement issues.

K1MAN's renewal anniversary is on October 17th of this year. Here is an excerpt from an FCC letter to K1MAN dated January 29, 2002.

"The rules of the Amateur Service are straightforward and easy to understand. To the extent that you do not comply with Commission rules regarding the Amateur Radio Service, then to that extent enforcement action will be taken against your licenses. That enforcement action may include revocation of your station license, suspension of your operator license, a modification proceeding to restrict your operating privileges, or monetary forfeiture.

It is also important for you to understand that if these matters are not resolved, your operator/primary station licenses will not be routinely renewed; but instead will be designated for hearing before an Administrative Law Judge. In such a proceeding, you would have the burden of proof to show that your licenses should be renewed."

It's time for Baxter and all of his associates to stand before a Judge.

938. Question on cb radios..

Newsgroup: rec.radio.cb
Date: 2005-06-26 23:57:38 UTC
From: JohnM <eaotis@cbpu.com>
Message-ID: <42bf40dc$0$5707$9a6e19ea@news.newshosting.com>
Source record: 201825

Hi, I'm new here so don't flame me too bad..

I was looking at sideband radios on ebay and, in addition to SSB radios,
I see SBE. So, now I'm curious as to what the difference is..

Many thanks,

John

939. Is it Possible to purchase Handheld AM/SSB Transceivers to Talk to People On?

An even better way to setup anonymity is with mail2news and a remailer,
it takes a bit more knowledge and work but is worth it in the long run.
A google should supply one with all necessary details and tools.

> Is It Possible to buy Handheld AM/SSB Transceivers to talk to people on??

In today's extremely noisy 11 meter band, you would not get far enough to make the expense worthwhile. Any radio transmitter requires a 1/4 wave antenna to work effectively. Handheld radios, whether a 27 MHz CB transceiver or an 2 meter HT are very inefficient units. By the time you hook up power, antenna and microphones to them, you might as well have used a proper mobile or base unit.

Don't waste your money or time on a handheld unit.

In the same vein, the ads for 5, 7 and 10 miles simplex 460 MHz HT's, like offered for sale as FRS/GMRS radios are a crock. With the small built-in antennas, you will get no more range then a .5 watt FRS radio.

Don't be fooled. The only way to get some range with a radio is height.

In radio height is might. That's why radio towers are so tall.

It is in reference to a fine boatanchor. Old radio, usually 23 channel with capability of putting a VFO on it and talking from 26.00-28.550. I have an SBE Console II for sale. I am slowly getting out of CBing so would let it go for a decent price. These have am/usb/lsb and will tweak out to a buncha power going out if youo want to go illegal.

When I lived in San Diego, bunch of years ago, there was a woman who remembered eating dandelion greens at her grandmother's house.. picked a bunch in the yard and fed 'em to the family- they ended up going to the emergency room 'cause they thought they were dying, turned out what she thought to be big dandelions were some relative of tobacco:D

gee, sounds like another one looking to get probed by the system for
unprofessional behavior on (and off) the air......

I hate to say this Lloyd, but K1MAN earned whatever actions is being taken
against him. in fact, he demanded this action by his very threats.

in any case, I think I will sign that petition myself, just because Mr.
baxter's actions draw negative attention to the service as a whole.

Authorless?

>Glenn A. Baxter, P.E., K1MAM, (or as his

>parter and buddy Chris Murdoch, WA1HOD,

>calls him - K1MAN-kind) has a long long

>history with the FCC.

So do I. So do plenty of people. So what.

>For those of you just joining the debate, here

>is some information that might help explain

>why so many hams are eager to sign the

>Petition to Deny License Renewal to K1MAN

>at www.no2k1man.com

>K1MAN, by his own actions, has made himself
>a very public figure.

That is usually how one becomes a public figure, by their own actions.

>As a public figure, he's been widely discussed

>by his fellow hams here, on QRZ, and

>elsewhere on the internet, on amateur radio,

>in court rooms, discussed by his employers,

>his neighbors, discussed by the FCC, at CBS,

>and by the Department of Justice.

Dialog is a great thing, especially those who play a part in stimulating
it.

>In reviewing the history of K1MAN and his

>qualifications to remain a Commission

>licensee, we can go back many years,

Who is "we"?

> to May of 1986, when he sued the

>advertising manager of QST and another

>employee of

>ARRL for conspiring to damage his business

>reputation.

That would be the proper path to take when one believes they have been wronged or injured by another party. Perhaps you prefer more neanderthal-like actions.

>QST had received a complaint that showed

>that Baxter's Collins Repair and Alignment

>Service had significantly overcharged a

>customer beyond an amount they had

>previously agreed upon.

>The advertising manager at the time wrote

>Baxter on QST letterhead, saying, "When your
>service charges escalate from $75 to $225

>and then to $275 we become very much

>concerned about the manner in which you are

>treating our members.

>You will recall that I

>discussed with you ... the highly suspect illegal
>spending of deposits which members were

>sending to you.

???? When one sends a business a deposit for a product, there is no law governing how that depost is spent by the business after the product was shipped.

>.. unless you can convince me that your

>operation exists in the best interests of our

>members, we shall be unable to carry further

>advertising from you."

>This exchange and the subsequent lawsuit by

>Baxter (dismissed) may help to explain why

>Baxter has attacked the ARRL and its staff

>with such zeal over the years.

Dialog is not an attack. What do you construe as an attack? Words? Put down? The ARRL has been "attacked" by many with good cause on many occasion.

>He says he wants to make IARN an

>"Alternative to ARRL" but, discerning readers

>may recognize another agenda.

I do. I recognize someone that is too chickenshit to reveal their name in regards to an issue and soon-to-be public document they claim they are about to sign. I mean, if I was going to get on the net and lobby for support for a legal case that affected me in the most profound manner it does you, I would at least give it an air of credibility and attach a proper to it. Besides, what the hell do you care if someone wishes to make an alternative to anything? The agenda is clear,,it's all yours.

>Some old timers may recall Baxter's lawsuit

>against the FCC to maintain the old AM power
>output of 1,000 watts. That lawsuit was

>dismissed because Baxter failed to exhaust

>administrative remedies through the FCC

>before bringing suit. As the old adage goes, it

>appears there really is a drawback to acting as
>your own attorney.

It appears as if you are still stinging and reeling from these past actions. Let it go, OM, and you will find comfort among your inner strife.Many lawsuits are dismissed every day. Again, So what. How is his attempt at suing the FCC connected to your more than biased position?

>You may also recall Baxter's 10 million dollar

>lawsuit against the FCC? He claimed he was

>defamed by the alleged suggestion by Riley

>Hollingsworth that he was shut down by the

>FCC. Baxter reported at the time that he had

>or from any suggestion that he endorses your

>station, Association, or other operations." He

>(Ronald S. Konecky) went on to call Baxter's

>actions "a violation of Mr. Cronkite's rights,

>totally improper, and a cause of serious

>damage to his name and reputation."

>Baxter's actions, have not endeared him to

>CBS,

You think CBS has personal feelings against this hammie because of Kronkite getting all worked up? There's this bridge in Brooklyn,,,,,,

>The Maine Department of Justice,

What did they do?

>Walter

>Cronkite,

I'll bet he's losing sleep over that one.

>the FCC,

In the infamous words of Al Lewis (Grandpa Munster) "Fuck the FCC!"

>or the countless hams who have complained

>about Baxter's relentless interference to their

>ongoing communications.

Anonymous complaints concerning hammie and cb radio are worthless these days with the FCC. Hey, thank K4KWH and his merry little band of toads, like N8WWM. Someone had to put an end to their bullshit (read: bogus) complaints to the FCC.

>When Baxter began to send out his self-styled
>notices of Felony Affidavit Complaints to those
>he perceived as interfering with his bulletin

>service, it really hit the fan.

>On January 5th, 1995, Jay McCloskey, the

>U.S. Attorney at the Maine Department of

>Justice wrote to Baxter, telling him, "It is

>against the law to write and mail this type of

>threatening communication, especially when it
>has no basis in fact. If you continue sending

>this type of letter, you may be subject to

>Federal criminal charges for misrepresentation
>and for using the mails to make threats. You

>may also jeopardize your amateur radio

>license; the FCC can use evidence of this type
>of conduct to demonstrate that you no longer

>meet the character requirements for a

>license."

My gosh,,,google N8WWM. Now there is an issue for character. Wonder how many hammies are actual felons like Dogie?

>Baxter responded to this letter on January 9,

>1995 by writing to the Assistant US Attorney,

>stating, "Your blatant and malicious abuse of

>the power vested in you by the citizens of the

>United States is despicable, unethical, criminal
>and unprofessional."

Sounds like he told them to go screw themselves.

> Baxter went on to demand a retraction, which,
>of course, he never received.

And of course, you are begging for attention, which, of course, you are unable to command in real life.

>hardly endeared himself politically to the

>members of the Maine Department of Justice,

>but the lack of political goodwill doesn't stop

>there. On January 23, 1995, FCC Counsel

>John Greenspan wrote to Baxter regarding an

>insulting letter he wrote to the Assistant US

>Attorney, "Your reply suggests to me that you

>may very well lack the character qualifications

>to be an FCC licensee. You certainly lack the

>maturity, but that is, unfortunately, not grounds
>for revocation.

Another blatant ignorant statement from the FCC. Maturity is no barrier from getting a license (as he admits), but the asshole who made this statement is typical of the leaedership at the FCC.

>If it is ultimately determined that you have

>made improper threats, that determination

>could result in a hearing to examine your

>fitness to remain an FCC license and/or

>criminal prosecution." John Greenspan went

>on to add, "Although you have not used

>lawyers in the past, I suggest that you consult

>with an attorney knowledgeable in FCC

>procedures about your alleged conduct. To

>provide some incentive for you to do this, let

>me say that if you wish to speak with me for

>any reason, it must be through an attorney. I

>will not accept any calls or letters from you

>personally."

In this case, I'd toss in a change of address and have all contact info originating from the FCC returned to sender until the last possible legal moment. In fact, I'd delay the process of contact right down to the wire, just so the dick-with-ears at the FCC who can't hold his temper would pop.

>Not exactly a love letter is it?

>Over the past 5 years Baxter has been

>contacted by the FCC on numerous occasions
>and his station has been inspected by the

>FCC.

Which means he complied with inspection procedure each time, yet, you
still have a problem.

>Baxter says he has received FOUR (4)

>NAL's to date. The FCC has writtent to him

>about allegations of broadcasting, deliberate

>interference, failure to identify, poor signal

>quality, erratic starting and stopping times,

>recording conversations without permission,

>and the list goes on...

The FCC can wrote to anyone concerning any "allegations". It means shit
in context of the law.

> Even Baxter's neighbors are not immune from
>his tendency toward trying to use the courts to
>settle what some might consider silly disputes

>that would be better handled by a personal

>phone call.

You certainly have a problem with following the course of law one is
supposed to follow. Since you posted anonymously concerning another's
personal and have taken issue with the subject's legal ways, chances are
your backyard is a sewer.

> More often than not, Baxter has lost in the

>courts due to procedural defects in his

>lawsuits. He is not, contrary to a popular myth,
>fabulously wealthy, or a lawyer. According to

>staff at the IRS, his IARN charity did not even

>make enough money to require that he file

>taxes last year.

Charity organizations are exempt from paying taxes and the IRS is
forbidden from commenting on personal returns.
One's charity organization may very well have nothing to do with their

personal organization,

> An underfunded organization like IARN that

>engages in irresponsible activities like calling

>for jump teams to visit disaster areas who

>don't even request assistance, does not seem

>to me,

You don't exist. You're like a mirage,,not real, meaningless.

>to be an alternative to the ARRL,

>except perhaps in the mind of Mr. Baxter.

>On May 4, 1983, Baxter sued a neighbor of

>his, Camp Runoia, a camp for little girls,

>because they stacked cordwood on the side of
>the road. The case was dismissed. The camp

>had removed the wood prior to the case being

>heard.

And it appears to have taken a court case to do it. Nevertheless, his goal apparently was reached by the filing of the case.

>Baxter's other neighbors have apparently also

>had reason for concern regarding his allegedly
>threatening behavior. According to reports

>gleaned from court records in December of

>2003, Baxter was dismissed from his job

>(fired) as station engineer for FM 95.3 in

>Augusta, Maine. When he applied for

>unemployment compensation, the attorney for

>the station advised his clients not to attend the
>unemployment hearing. "Because Mr. Baxter

>has demonstrated offensive behavior similar

>to that which prompted his termination, I have

>advised the Bouchards not to attend Monday's
>hearing. I indicated to you in our conversation

>that the Bouchards' fear for their safety as a

>result of Mr. Baxter's threatening behavior. Mr.
>Bouchard terminated Mr. Baxter from

>employment when Mr. Baxter repeatedly

>acted in a threatening manner to his

>supervisor and to other employess at the job

>site.Mr. Baxter demonstrated his inability to

>act responsibly and to exert self-contol at the

>last hearing."

Well, you have already demonstrated beyond a reasonable doubt that you misconstrue talk, opinion, discussion, and dialog as "attacks", so it is of little wonder you are having difficulty comprehending what construes "threatening" behavior.

> The attorney (Robert J. Stolt of Lipman, Katz

>& McKee) goes on to say, "Payments of

>benefits to Mr. Baxter is a lesser evil than

>someone being harmed by him."

In other words, he received his monetary award.

>Baxter sued regarding these comments, but

>the court held that the comments made by the

>attorney were completely privileged in nature

>and were therefore protected by law.

>Ironically, Baxter's objections have ensured

>that they will reside in the annals of the Maine

>courts in perpetuity, for anyone with the desire
>to read them.

No one gives a damn except those shleps like yourself

>For all of these reasons, and the reasons in

>the present NAL, I will sign the petition to deny
>license renewal to K1MAN. I don't believe

>K1MAN is capable of engaging in good

>Amatuer practice, as we are all compelled by

>law to do.

>Although I hold no malice toward Mr. Baxter

>personally,

Personal feelings are all you have.

>and I believe him when he says he suffers

>from mental illness, I believe that Mr. Baxter

>has already amply proven that he does not

>deserve to remain a Commision licensee.

The word "deserving" is not in the lawbook.

>K1MAN has pending enforcement issues.

Gee, let's yank the license of all hammies with enforcement issues that
are pending.

>K1MAN has already been warned by the FCC

>that he may be referred to the ALJ due to

>ongoing enforcement issues.

Well, then, let's just take it a step further and yank all licenses of
hammies who have been warned in the past.

>K1MAN's renewal anniversary is on October

>17th of this year. Here is an excerpt from an

>FCC letter to K1MAN dated January 29, 2002.
>"The rules of the Amateur Service are

>straightforward and easy to understand. To

>the extent that you do not comply with

>Commission rules regarding the Amateur

>Radio Service, then to that extent enforcement
>action will be taken against your licenses. That
>enforcement action may include revocation of

>your station license, suspension of your

>operator license, a modification proceeding to

>restrict your operating privileges, or monetary

>forfeiture.

>It is also important for you to understand that if
>these matters are not resolved, your

>operator/primary station licenses will not be

>routinely renewed; but instead will be

>designated for hearing before an

>Administrative Law Judge. In such a

>proceeding, you would have the burden of

>proof to show that your licenses should be

>renewed." It's time for Baxter and all of his

>associates to stand before a Judge.

Perhaps it is. And the majority of faceless hammies who sign such a petition of envy will no doubt, not be present for such proceedings.

965. SWR - wtf?

So ... I have an older CB - Cobra 21 LTD Classic with weather stns etc. ... a 102" Shakespeare Antenna - 18' of cable - and this http://cgi.ebay.com/ws/eBayISAPI.dll?ViewItem&item=5783955280&category=48699

(not advertising it just using it for the picture) ... Anyone know how to use the Land Matic LM-50 ... it was pretty cheap like $16.00 Cdn I think - I got it new but it didn't have any instructions - I don't even know the wattage I should be setting it on. I'm assuming that the antenna goes into the back on the side with ANT and the radio goes into the side marked TRANS - but I'm not sure - does anyone know of any webpages that provide some sort of instructions on how to use SWR meters?

TIA

JohnM:

Yes, any of the older radios like that work excellently with a VFO and cover the freebands at the top end of HF quite nicely...

... a few parts and a general pcb board from radio shack and a guy can slap together a VFO quite cheaply...

Thanks for the link. It appears the dude may have a struggle concerning not identifying with his call as one is supposed to, if that's even true. I have come to accept FCC claims with a grain of salt in the last year or two. The wording of the FCC is, as always, a joke. What the FCC actually witnessed and what the FCC accuses k1man of, are separate issues. The FCC always uses their intimidation bullshit factor of "The FCC has received information that your station is in violation of (enter rule violation here)". That part is a joke, as FCC personnel -must- witness any infractions and use the underhanded slimey tactic to prey on ignorance of hammies who don't understand the law. If one was not familiar with the nuances and bullshit operations of the FCC, one could take their claim "The FCC has information indicating you were in violation of (insert rule here)" to mean the same thing as "You have been found guilty of breaking (insert rule here) by the FCC and this is a warning". That's bullshit. When the FCC words their letters in such a manner, it means only one thing: that they are responding to an individual who lodged a complaint against you and are taking the complainant's word at face value...usually someone like Oxendine who taped a conversation (that could have occurred anywhere) and sends the tape to the FCC and tells them it was two truckers he spied on the interstate on the freeband. Since Oxendine sent the plate numbers and names of the trucking companies to the FCC along with the tape he made, the FCC assumes this to be true. You can bet the farm that each and every warning letter the FCC sends out that is worded "The commission has before it information that you were in violation of ...." is bogus in the fact that the commission actually has no "information" at all regarding anything other than a single complaint that could very well have been lodged in malice or false witness.

Complaints the FCC receives regarding infractions of this nature, no matter how numerous or multiple, can serve only as hearsay to the FCC and has zero impact regarding legal ramifications.

As far as content is concerned, merely talking about a pecuniary interest is not a violation. The FCC embarassed themselves last year with a similar case by mistakenly and wrongly trying to outlaw hammie radio operation while under the influence of alcohol. An agreement was reached between the wrongly affronted hammie and the FCC. It appears the FCC is again trying to force the issue of controlling content regarding what is said and how, IE: freedom of speech. In this specific regard and interest, I wish k1man well.

In respect to the accusations that k1man was transmitting on top of other communications, well, that's the nature of the beast and the way it's always been, especially on popular or crowded frequencies. One is always transmitting on top of another in some fashion. K1man apears to have a certain faction of detractors whose concern is beyond the

welfare of hammie radio.

The last election was a farce, that's for sure. I heard that Joe Biden
is tossing his hat into the ring for 2008, and McCain is stepping into
the spotlight quite often lately..... now -that- would be a good race!

Hi John, that tobaccy juice can really turn a person green when swallowed.
My uncle (god rest) used to chew that mail pouch stuff like it was going
outta style, so as a youngin' I was always curious what the big attraction
was, besides the cool spitting side effect.

Never failed to make me wanna hurl, whenever I'd get the nerve to try it
again :)

>some sort of instructions on how to use SWR meters?

They're pretty easy. The cables hook up just like you figured.

Start by setting your radio to ch 18 AM (not SSB). Switch the matcher
off (you won't even need it), set the power switch for 10W, the top
switch to FWD CAL and the SWR/CAL switch to CAL. Key up and adjust the
slider so the meter reads full scale. Then unkey, switch the SWR/CAL
to SWR, key up again and read the meter. Adjust your antenna to get
the lowest SWR -- the lower the better. Then check SWR at both ends of
the band. An SWR of 2:1 or lower across the band is fine. If you can't
get it below 3:1 on any channel then there's something wrong with your
system, like a bad ground or coax cable.

If you want to play with the matcher, make your initial adjustments
while listening to the noise in receive. Start with TUNE all the way
left and sweep LOAD until the noise peaks. Check SWR. Then turn TUNE a
little bit to the right, sweep through LOAD again for the noise peak,
and check SWR again. If the SWR is better then keep going through the
process until it starts getting worse. Eventually you will find a spot
for both knobs that work to give you the best SWR. But remember that
when the matcher is tuned it's tuned very sharply to that freq -- you
will need to retune the matcher every time you move more than a couple
channels away.

Nobody should forget why we call her mopathetic...and thankfully the nutless he-she gives us plenty to laff about.

Doncha worry, "Uhl'll" get a big kick outta the AKC when we choose the time. All your ranting and whining, the same kind you did when you couldnt have candy or toys as a child, won't matter.

You just go right on with your stupidity, and when you are whining over it you will have nobody to blame but yourself.

poor moparholic at hotmail dot com...pooow widdow baybeee

Come on buttlips, make some more threats about what you are gonna do. We are all quaking in anticipation of your next posts, sissy ass....quaking with laughter because of your obvious frustration at not being able to do anything. We done toldja before, buttlips, WE choose when and how and where, you are just the puppet that responds to us when told to. Spin it how you want, but the basic facts are true...

1. You did not go to Dayton after threatening people with what you were gonna do to them when you were there...We did go.

2. You are a frustrated little dweeb who can't have it your way and since the whole world sees your idiotic impotence, you have to rant and rave and spin to soothe your ego.

3. Your mommy spoiled you and gave you what you wanted cuz you are such a whine baby. We won't. It drives you nuts and you go apeshit with repost after repost and NOTHING else.

4. We make you respond EXACTLY how we wish you to. You cannot help yourself. You are powerless over your mania.

Thank you again and again and again for proving who holds your pink sheet. Notice, that wasnt pink slip. That's what you wear to truckstops. Post some more threats, we will look at 'em later and decide which way we want you to dance. Stand by to receive your orders, mopathetic.

Source record: 201875

> So ... I have an older CB - Cobra 21 LTD Classic with weather stns etc. ...
> a 102" Shakespeare Antenna - 18' of cable - and this

What makes you think 18 feet of coax is even a half wave?

At 27.185 MHz (ch 19) a half wave is 17.21 feet.

At 66% velocity factor, an electrical half wave is 11.36 feet.

At 77% velocity factor, an electrical half wave is 13.25 feet.

What's so special about a half wavelength of coax?

It's the point that the SWR at the feedpoint is reflected to the other
end of the coax. At any other point in the coax, the phase angle affects
the apparent SWR seen by a Voltage reading SWR bridge. You can swap in
different lengths of coax to see this in action for your self. If your
antenna feedpoint is 50 ohms NONREACTIVE, coax length does not matter.
If there is a reactive component to your antenna system, the reflection
travels back through the coax and at different points the voltage and
current will affect the reading on the meter. A matchbox does not fix the
mismatch of the antenna, it only fixes what the load sees the antenna as.

The mismatch does not go away just because you've adjusted a few knobs.

The Mobile antenna websites practically tell you to keep the coax at 18 feet, or
else. I thought that was true, until numerous people at this group and several
websites said that is nonsense.

Can anyone tell me the characteristics of the Maxitune diode? I have been looking for a cheaper, alternative source, which I may have found, but I don't know the original specs of the Maxitune.

Thanks,
DG

I see you aren't up on all the facts. its not a revocation, its a petition
to deny a renewal. a revocation requires an entire process to be initiated
(which so far, has been started with the investigation and the notice of
apparent liability). However, I digress, this isn't a revocation.

as for my enemies, well, they have been mitigated or otherwise marginalized
into obscurity (can you say the same?).

>
> Would you feel that they were justified in petitioning the FCC not to
> renew your license? Is there anyone else whose license "we" should
> petition the FCC not to renew? Pretty soon we can all be gathering
> signatures in an attempt to silence our perceived on-the-air enemies.

well, you would have to justify it and show evidence before the fcc why it
should be allowed. in fact, I welcome the challenge from you to attempt to
do so. However, I would suggest you make sure all your I's are dotted and
your T's crossed.

Just to make this point clear, Mr. baxter has violated a fair number of
rules and regs over the years, and even continues to do so given the
current circumstances. can you show anywhere in ham radio (on the air)
where I have done so? didn't think so.

>
> This petition thing is a piss poor idea, invented by those who would
> unwittingly harm amateur radio itself.

and you base this opinion on what facts?

fact:
1. mr baxter has repeatedly and with intent violated part 97 on numerous occasions
2. he has violated other rules and regulations related to the above
3. he has issued frivolous threats through the mail (some of which is amateur radio related)
4. his statements in the public record indicate that he has no interest in helping the service, just trashing it.

lastly, he has used his station in a manner that suggested a pecuniary interest.

in this day of paranoia and distrust, people like him can always be pointed to as the worst possible example (and thus, give those in power a reason to take away what we worked so hard to achieve. which is the worse threat?

well you seem to think that the petition is a bad idea, perhaps you need to further review the facts before you go spouting off.

It's just a convenient premade length of coax. My RadioShack 19-210 2 meter antenna came with the same junky 18 foot length of crappy RG-58 with a crimped on connector. After removing it from the magnet and drilling a hole to properly mount it, I cut off the extra cable and put a solder on end on it. If it didn't have a propietary connector going into the base of the antenna, I would have replaced it with something better. RG-58 is barely good at 27 MHZ and even leakier at 146 MHz. The shorter the better. Coax length does not matter if the SWR is at 1.5:1 or less. I haven't bothered to check my SWR on my CB antenna since I got my ticket. The CB still works just fine with the RG-8X and 225 amp on it!!!

For a NGP antenna, the shield is the counterpoise, and if you change the length of that, you'll detune the antenna. If you can alter things by moving the coax around, you've got a problem. Think of coax as a "signal hose". The RF should stay inside of the coax, not run along the outside and affect things. If things change, start by fixing your ground. That's one reason I took my antenna off the magnet. The other was so that it won't get knocked over by a low branch on the trail.

I immediately noticed the antenna worked better with a real ground.

And one last thing,

The speed of the signal INSIDE the coax (the velocity factor) is slower
then the speed of the signal OUTSIDE (on the shield). While 17.21 feet
is a quarter wave on the outside of the shield, the inside 1/4 wave is
shorter. If you want to see the actual SWR at the feedpoint, then use
a 1/2 wave electrical length of coax. This will shift the phase of the
mismatch back into it's original position at the other end of the feedline.

(I learned all this stuff while I was still a single bander, and still
laugh at all the ham's that still believe the coax length BS.)

I don't dislike CB. It's another band to use. I dislike all the noise on it now!
If I can't find someone to talk to on one band, I've got others to use now.

BTW, repeaters suck! I've only got to abide by Part 97, not what some control op
thinks his interpretation of the rules are. I'm simplex only these days.

(Sorry, no letters or warnings have been recieved by me! I just said fuck it.)
And I didn't say that on the air!!!!!!!!!!!!

****

If the shield is the counterpoise for the antenna, then the antenna is
installed with no ground and thus inproperly installed period. In a
properly install antenna system you should not have common mode
currents residing on the shield of the coaxial transmission line.

All to often on cars today, there is far to much plastic and not
enough metal to offer a sufficient RF ground. The vehicle frame and
body, if metal, should be the uppper plate of a capacitor that is
formed with the Earth below. The metal under the antenna is important
for radiation. The more the better.

It worked good as a magnet mount, it just works better with a real ground!

BS

Common mode currents on the shield of coaxial cables do not alter the feed impedance. Repeat ofter me. Common mode currents on the shield of coaxial cables do not alter the feed impedance.

The feed impedance of an antenna is solely determined by its physical length and any load impedances within the antenna structure. Load impedances can be stray capacitance with ground via metal objects within the near field of the antenna or even a building.

The "Magic" of an electrical halfwave transmission line is at a precise frequency, the reflection of the load to the transmistter is equal to the characteristic impedance of the transmission line irregardless of what impedance it is terminated with. Other lengths have the load impedance reflected back and transformed by the length of the coax. The coax then acts as a transformer. It will either step up or step down the impeadnace of the load depending on the load itself and the electrical length of the coax.

All a tuner does is electrically lengthen or shoten the coax by introducing a lumped LC constant that helps present a resistive load to the transmitter. The SWR at the feedline does not change. By placing various different lengths of coax inline, you do the same thing a tuner does, add a lumped LC constant.

*****

And I have the biggest laugh because most CBers as well as Hams have a
peanuts view of what a transmission line is or how signals act on and
in them.

First off, while the coax can be inside the field of radiation, the
signal from the transmitter to the antenna travels solely inside the
transmission line. That is between the center conductor and the
shield. The energy transmitted travels in the dielectric and it is the
dielectric that slows the wave down and casue loses. Even the worst
coax, RG-58 has sufficient shield as to not cause leakage through the
shield at 27 MHz. Maybe a 10 GHz. but not 27 MHz.

Common mode currents occur on the shield and are just that currents.
They can come from poor ground connection at the antenna feed point or
can be induced currents due to the coax being within the fear feild
energy of the antenna. Often common mode currents are also rich in
harmonic energy and that is what reradiates and cause TVI and
interference.

Hello, Mopar

Fact is that as long as the feedline is not lossy, SWR doesn't really
matter - so long as you present a proper 50 ohms to the rig via a tuner.

I used a long wire years ago from 1.8 MHz to 30 MHz and have no idea what
the SWR was on any frequencies. The pi network took care of that. The
thing was good for thousands of miles on milliwatts and anywhere at all on
50 watts or so :))

Coax, however, can get lossy with high SWR, especially at the higher HF
frequencies (and virtually any frequency if the SWR is *really* high).

One possible warning - if the SWR is caused by a faulty connection or a bad
antenna, you can match the thing to your rig, but most of the power will
disappear as heat in the fault.

Best regards from Rochester, NY
Jim

The energy in a coax travels on the conductors -and- in the dielectric
-and- within the magnetic fields. The propogation delay of a line is
the combined phase delays of distributed capacitance -and- distributed
inductance in the line. The dielectric constant only -seems- to be the
determining factor of coax propogation delay because the conductors
are straight. IOW, if you replace the center conductor with a coil you
will introduce an additional propogation delay into the coax which is
-independent- of the dielectric constant (and will have constructed a
device known to us old farts as a 'helical resonantor'). Regardless,
it has no relevance to this discussion.

>energy of the antenna.

One of the most misunderstood terms in radio is "common-mode current".
It simply means that current is moving in the same direction, and in
phase, on two or more conductors. It occurs in a coax when current on
the -inside- of the shield is in phase with the current on the center
conductor. Any RF current on the -outside- of a coax has -nothing- to
do with common-mode currents -- it's simply the result of RF spilling
out of the coax or being induced onto it from an external field.

> Often common mode currents are also rich in
>harmonic energy and that is what reradiates and cause TVI and
>interference.

Hogwash. Harmonics don't just appear because of common-mode currents.
They must come from a source -- i.e, the transmitter. And conductors
of common-mode currents don't have any magical properties that let
them conduct or radiate harmonics any better than the fundamental
frequency. That's RF voodoo.

I think you have that a little misconstrued..... reflection of the
load to the transmitter by a half-wavelength coax is equal to the
-load- regardless of the characteristic impedance of the -coax-.

And Lancer was right, RF on the shield at the feedpoint -will- change
the input impedance of the coax because the shield is no longer
grounded, which is a necessary condition for proper operation of the
coax.

>>>To have the measured SWR change with coax length, means you have
>>>current flowing on the outside of the coax. Your coax then becomes
>>>part of the antenna, so changing its length is changing the antenna
>>>length. This would change the feedpoint impedance and the SWR.

That's correct, except that coax loss will also cause the SWR to change with coax length. Loss will cause the SWR at the antenna (load) to always be greater than at the transmitter (source).

>>>
>>>Unless the line is carrying common mode currents that affect antenna
>>>impedance, changing coax length won't change the SWR, even if the
>>>antenna isn't matched.

Again correct except for overlooking the effect of coax loss.

But there's a real problem in communicating this. If you hook a 50 ohm SWR meter to the input of a 75 ohm, 300 ohm, or line of any impedance other than 50 ohms, the meter reading won't be the SWR on the transmission line. That can mislead people into thinking that the SWR is changing with line length when it actually isn't.

>>
>>********
>>
>>BS
>>
>>Common mode currents on the shield of coaxial cables do not alter the
>>feed impedance. Repeat ofter me. Common mode currents on the shield of
>>coaxial cables do not alter the feed impedance.

Why repeat it if it isn't true? The explanation given by Lancer was correct. If you change the length of the antenna, the feedpoint impedance will change. When you have common mode current flowing on the feedline, the feedline is part of the antenna; changing its length is

changing the antenna's length.

>>
>>The feed impedance of an antenna is solely determined by its physical
>>length and any load impedances within the antenna structure. Load
>>impedances can be stray capacitance with ground via metal objects
>>within the near field of the antenna or even a building.

You have to realize that a radiating feedline (one carrying common mode
current) IS part of the antenna structure.

>>
>>The "Magic" of an electrical halfwave transmission line is at a
>>precise frequency, the reflection of the load to the transmistter is
>>equal to the characteristic impedance of the transmission line
>>irregardless of what impedance it is terminated with.

This is true only of a lossless line. If the load impedance isn't far
from the line's characteristic impedance (i.e., the line's SWR is low),
a small amount of loss won't make much difference. However, if the line
SWR is high, even a small amount of loss can make a major change in the
impedance seen at the line's input. The effect is to skew the impedance
toward the line's Z0.

> Other lengths
>>have the load impedance reflected back and transformed by the length
>>of the coax. The coax then acts as a transformer. It will either step
>>up or step down the impeadnace of the load depending on the load
>>itself and the electrical length of the coax.

It's a little more complicated than that. The line doesn't simply
multiply or divide the impedance by a constant, like a transformer --
except in the special case of a quarter electrical wavelength line or
odd multiples thereof. In other cases, the line does transform the
impedance, but in a complex way in which the resistance and reactance
are transformed by different factors. And reactance can be present at a
line's input even when the load is purely resistive. A Smith chart is a
good visual aid in seeing what happens. Assuming a lossless line, the
impedance traverses a circle around the origin. The radius of the circle
corresponds to the line's SWR. With the chart, you can see all the
combinations of R and X which a given line can produce with a given load
by changing its length. Incidentally, loss causes the impedance to
spiral inward toward the origin as the line gets longer, showing how
loss skews the input impedance toward Z0.

>>
>>All a tuner does is electrically lengthen or shoten the coax by
>>introducing a lumped LC constant that helps present a resistive load
>>to the transmitter. The SWR at the feedline does not change. By
>>placing various different lengths of coax inline, you do the same
>>thing a tuner does, add a lumped LC constant.

As can be seen from the Smith chart, you can produce only particular combinations of R and X by changing the length of a line which has a given load impedance. Unless you're unusually lucky or have planned things carefully, none of these combinations will result in 50 + j0 ohms, the usual goal, at the line's input. In contrast, a tuner is able to adjust both R and X to produce, if designed right for the application, 50 + j0 for a wide range of load impedances.

It requires at least two adjustable components to achieve an impedance match from an arbitrary load impedance, because there are two separate quantities, R and X or impedance magnitude and phase, which have to be adjusted. Changing the line length is only one adjustment, so it can't be guaranteed to provide a match. If you could also change the line's Z0, for example, or the length of a stub, you'd have two adjustments and you could guarantee a match providing you have enough adjustment range.

>>
>>james
>
>
> So thats all my tuner does, lengthen or shorten the coax?

Yep. And I should add that 18' of coax is recommended not because of
it's propogation characteristics -inside- the coax, but because of
it's velocity factor on the -outside- of the shield which is nearly 1.
IOW, when the shield of an 18' length of coax is grounded only at one
end, that ground will be reflected at the other end of the coax. At
least that's the theory. In practical use it's not perfect, but it's
still better than a fully ungrounded radio or antenna.

A varactor or vari-cap diode with supposedly much better characteristics
than standard varactors. CBC International used to have them for sale and
they were close to $10 a piece a few years ago. However, I have recently
come across some low cost, high capacitance varactors that I'm wondering
whether or not they will suffice for the same applications as the Maxitune,
but I don't know what the original specs of the Maxitune are.

>

In addition, most hams (and other non-professionals -- and even many professionals) don't bother to check that their SWR meter is properly calibrated to the impedance they think it is. Most are nominally 50 ohms, but they can be built for any practical line impedance. Checking calibration is not all that difficult, if you take the time to do it. In addition, your nominally 50 ohm line (or 75 or whatever) can have an actual impedance 10% or more from the nominal value. If you have properly calibrated your meter to 50 ohms, and your line is 60 ohms, you would read 1.2:1 SWR when your line is actually 1:1. And if the SWR on the 60 ohm line is 1.2:1, that 50 ohm SWR meter can read anything between 1:1 and 1.44:1, depending on the line length and its load. Finally, though you may have checked that the meter to reads 1:1 with a 50 ohm load and infinity to 1 with a short or open load, the construction of inexpensive meters may cause them to have significant errors at other load impedances.

...

> toward the line's Z0.

The piece that Roy quoted is so outrageous that I can easily believe he
didn't read it right, but I've re-read it several times, and it keeps
coming out the same: the "magical" halfwave line does NOT reflect an
impedance to the source (transmitter) equal to the LINE impedance as
the quoted section says, but it reflects the LOAD impedance (altered by
line loss as Roy says).

...

about tuners, Roy went on to write:

> It requires at least two adjustable components to achieve an impedance
> match from an arbitrary load impedance, because there are two separate
> quantities, R and X or impedance magnitude and phase, which have to be
> adjusted. Changing the line length is only one adjustment, so it can't
> be guaranteed to provide a match. If you could also change the line's
> Z0, for example, or the length of a stub, you'd have two adjustments and
> you could guarantee a match providing you have enough adjustment range.

In addition, two adjustable components in a particular configuration,
even if they are infinitely adjustable (and reasonably close to
lossless!!--a very tall order!) won't necessarily give you the ability
to transform any arbitrary impedance to 50 ohms. There may be whole
practical areas of the complex impedance plane left untransformable.
Also, the efficiency of a particular tuner topology for a given load
impedance may be very good or may be terrible, when using practical
components in the tuner. To reiterate what Roy wrote, it's important
to use the right topology for the job you need to do.

Cheers,
Tom

Wow, I certainly read that (top quote) too quickly. Tom is absolutely
right, as written it's very wrong, and I misread it. I retract my
statement about it's being "true only of a lossless line" -- of course
it's not true at all, but works as Tom says.

ok then, explain the "felony afidavits" that k1man sent out. you want to
talk about maliciousness and vigilantism, there you go.

The problem is, you attempted to divert the point from the thread.

>

Impedance matching of an SWR meter is generally unimportant since most
SWR meters used for HF have a directional coupler that is much shorter
than the operating wavelength. Regardless, I'm not a big fan of SWR
meters -- they are good for detecting a major malfunction but that's
about it. Antenna tuning/matching is best done with a field strength
meter.

Point is that they are usually calibrated for Z0=50 ohms
and are in error when used in Z0 environments differing
from Z0=50 ohms, e.g. Z0=75 ohms.

Would the changing of the coax lead to moving the SWR meter to a
different voltage point on the coax?

A local retired instructor of some sort (military, i believe) has the
same opinion. He doesn't like SWR meters but instead measures all his
antennas by field strength meter.

I used to tune my Swan with one. I found when I used an SWR meter,
the minimum SWR dip was NEVER the maximum field strength reading. I
always had to raise the SWR to about 1.3:1 or so.

Around here, most of us know not to mention the performance of an
antenna to him if we only used an SWR meter or antenna analyzer. His
first question is "How did it do with the FSM?"

I believe he is right. Radios drop power when they don't like the SWR
and raise it when it does.

Sort of, but not exactly. Let's take an example. I'll keep the values purely real to help folks who aren't familiar with complex math, but keep in mind that these are special cases and a full treatment would be somewhat more involved. I'll also make all the transmission lines lossless to simplify things.

An SWR meter really just provides another way of reporting the impedance it sees. You can verify this by connecting pure resistances of various values to its output. For example, a (properly calibrated and operating) 50 ohm SWR meter will report 1:1 if you connect its output to a 50 ohm resistor. If you connect it to either a 25 or 100 ohm resistor, it reports 2:1. It does this despite the fact that there's no transmission line at all connected to its output. Some people can put up a huge smokescreen and waving of hands about reflected waves of one kind or another, but at the end of the day the SWR meter can't tell the difference between a resistor and a transmission line terminated with a load, if the impedances the meter sees are the same. It's sensitive only to impedance; it has no way of knowing even if a transmission line is connected to its output, let alone what the transmission line's SWR or even characteristic impedance is.

Now put a half wavelength piece of 50 ohm coax between the SWR meter and those resistors. The SWR meter will still see the same impedances as before, so it'll report the same SWRs. Now, though, there really is a transmission line connected to its output. And because the meter is a 50 ohm meter and the line has a 50 ohm Z0, the SWR meter reading is the same as the actual SWR on the line. When the load is 50 ohms, the line's SWR is 1:1 and the meter sees 50 ohms so it reports 1:1. When the load is 25 ohms, the line's SWR is 2:1, and the meter sees 25 ohms and reports 2:1. When the load is 100 ohms, the line's SWR is 2:1, and the meter sees 100 ohms and reports 2:1.

Next experiment: Connect the SWR meter through a *quarter* wavelength of 50 ohm line to a 100 ohm load. Now the impedance looking into the line is 25 ohms instead of 100. But the SWR meter reads 2:1 when it sees 25 ohms as well as 100, so it still reads 2:1, which is also still the SWR on the 50 ohm line. You can change the length of the 50 ohm line all you want and, if it's lossless, the line's actual SWR stays the same -- but the impedance at the input end of the line changes. For a 100 ohm load,

when the line is any even number of half wavelengths long, the input Z is 100 ohms. When the line is any odd number of quarter wavelengths long, the input Z is 25 ohms. At other lengths, the impedance is both resistive and reactive, but the line's SWR is always 2:1. And the SWR meter interprets all these possible impedances as 2:1, and that's what it reads. The line SWR doesn't change as you change its length, and the SWR meter reading doesn't change, either.

Now instead of a 50 ohm line, let's connect a half wavelength 100 ohm line to the output of the same 50 ohm SWR meter and hook that to a 50 ohm resistive load. The line's actual SWR is 2:1 and, just like any lossless line, the SWR stays the same regardless of its length. If the transmission line is an even number of half wavelengths long we'll have 50 ohms at the input and the SWR meter will read 1:1, since it's a 50 ohm meter and interprets 50 ohms as 1:1. If we change the line length to a quarter wavelength, the input impedance will be 200 ohms, which the 50 ohm SWR meter will interpret and report as 4:1. So by changing the line length from a half to a quarter wavelength we've changed the SWR meter reading from 1:1 to 4:1, even though the line's actual SWR was 2:1 all along. That's what I was talking about. The SWR meter makes assumptions about the SWR on the line from the impedances it sees. The line transforms the load impedance in a different way than a 50 ohm line would. The SWR meter then assumes an incorrect SWR value for the line, and this incorrect value changes as the line length changes.

The same thing happens if the line has a 50 ohm characteristic impedance and the meter is designed for some other Z0. The lesson is that an SWR meter shows the actual SWR on a transmission line connected to its output only if the SWR meter is designed for the same Z0 as the line.

Too often, people say "The SWR is. . .", but really mean "The SWR meter reading is. . .". As you've seen, the two can often be very different. When you see the SWR reading changing as you change the line length, it doesn't necessarily mean that the line's SWR is actually changing.

Remember, in the preceding discussion I've assumed for simplicity that all lines were lossless. In the real world, no line is, so the actual line SWR will always be higher at the load than the source (unless of course it's 1:1 at the load).

Roy, to cut things short, why don't you just say SWR meters don't measure SWR on anything. All they do is indicate whether or not the transmitter is terminated with its correct load resistance. So they are quite useful.

They won't even tell you what the load resistance actually is unless the load is exactly correct.

Stop fooling and confusing yourselves. The solution to everybody's problems is simple - just change the name of the thing to TLI. (Transmitter Loading Indicator).

Or - recalling that what the meter actually measures is the reflection
coefficient - why not go back to the old name of "Reflectometer"?

That last sentence should be "For a 100 ohm load, when the line is *any whole number* of half wavelengths long, the input Z is 100 ohms."

Likewise,

> Now instead of a 50 ohm line, let's connect a half wavelength 100 ohm
> line to the output of the same 50 ohm SWR meter and hook that to a 50
> ohm resistive load. The line's actual SWR is 2:1 and, just like any

> transmission line is an even number of half wavelengths long we'll have
> 50 ohms at the input and the SWR meter will read 1:1, since it's a 50
> ohm meter and interprets 50 ohms as 1:1.

"an even number of half wavelengths" should be "any whole number of half wavelengths".

I appreciate the corrections, and encourage anyone who spots errors to bring them to my attention, or the newsgroup's.

Depends on what one is running. My IC-706 folds back
automatically and protects itself. My SGC-500 linear
is advertised to tolerate an SWR of up to 6:1.

Maybe a guy who knows what he's doing can;-) Might be worth looking into, eventually.

Serious, the last time I bought a handful of components from RS the girl asked if I was making a bomb- and when I said well, yes, it was a timer I was working on, she got strange.. telling her it was a postflow timer for a plasma cutter I was working on didn't change her attitude any either. It was a little strange..

Again, thanks to all with advice in this thread- I'm learning, a little at a time.

John

A 20K ohms/volt Simpson may yield an irrelevant screen voltage
reading for a pentode because it loads the circuit down. Hand
waving aside, any instrument can be misused.

An SWR meter designed and calibrated for a Z0=50 standing-wave
environment may yield an irrelevant reading when operated outside
of a Z0=50 ohm standing-wave environment.

Trouble is, during steady-state, they only measure the virtual
reflection coefficient which is itself confusing since it is not
the same as the physical reflection coefficient measured by a TDR.

_____

Elaborating, an SWR meter will produce ~ accurate readings for an unknown termination connected to it via a lossless transmission line of any length, as long as that line has the same Zo as the sample section in the SWR meter.

It is only when the transmission line Zo varies from the Zo of the SWR meter line section that accurate measurement of load SWR is problematic.

Selecting line lengths and line impedances to make an SWR meter and/or tx "happy" when connected to an antenna doesn't necessarily mean that the all components in the r-f output system have low SWR. The tx may be able to deliver more power to the net load under those conditions, but SWR may still exist on the transmission line capable of causing its failure.

RF

==========

It does NOT read the reflection coefficient. It reads only half of it. At least half of the information lies in the angle of the RC - which is disregarded, ignored, by the so-called meter.

The magnitude of the RC without its angle is just another worthless number. It can't be used for anything except to calculate a fictional SWR.

Actually, it is pretty useful for a Z0-matched system
since there is one and only one unique solution at the
Z0-match point.

In a Z0-matched system, all forward and reflected voltages
and currents are at the reference zero degrees or at 180
degrees so all the phase angles are known without measuring
them. The physical reflection coefficient is a function of
Z01 and Z02 at a Z0-match point. The sign of the reflection
coefficient corresponds to either zero degrees or 180 degrees
and depends on whether (Z01 < Z02) or (Z01 > Z02).

Since the great majority of amateur radio systems are close
to a Z0-match, this becomes a useful analysis tool for the
most common cases.

There was no anarchy in Iraq until the failure babybush invaded.

>This

>ain't no fucking anarchy.

>Vinnie S.

Right. Anarchy is what will take place when China attacks Taiwan in two to three years and Bush has sworn to defend Taiwan at all costs. Can't you hear it now? Bush: "Taiwan imposed no threat to China. They must be protected"
China: "Iraq posed no threat to the US. Fuck off!" All predictions concerning the lies and failures of babyBush have proved true.

*****

Well the dielectric constant does have a direct effect on the
capacitance as well as the spacing between the two conductors. Still
the TEM wave propogates through the dielectric and induces currents in
the center and outer conductor. Propogation of a TEM wave can be
mathematically describe by the Pyonting Vector. The TEM wave is an
alternating E and H field.

The currents induced into the conductors have depth only to that of
sigma or the skin depth. I am not sure a coiled center conductor would
introduce anymore delays than a solid or even stranded center
conductor. On face evidence it would seem that it might but only if
the coil's turns per inch were suffieciently low enough as to not
appear to the traveling wave as a solid conductor.

****

Yes misunderstood.

I have yet to really see any coax of decent quality that has
suffiecient gaps in the shield to allow a 27 Mhz wave to have
appreciable leakage. Even with 80% coverage the holes in the shield
are so little of a wavelength that I would dare say less than 1/10,000
of the energy of the TEM wave propogating down the coax can "leak"
out.

As for common mode currents the coax itself can have induced currents
in the chield from fields radiated from the antenna. Depending on
where the coax is located to a conducting surface, you can develope
various intensity of currents. Yes you need two conductors minimum to
have comnmon mode. Earth can be one of those conductors.

*****

Harmonics are not there due to just common mode. My mistake there.

What I was thinking and what I wrote were not well alligned.

To generate harmonics off a the shield of the coax from an external
induced current, one needs a means of rectification. That can come
from two dissimilar metals that are not properly electrically
connected. Then the shield can become a radiator of externally induced
currents. It is the diode effect of two dissimilar metals that is the
source of harmonics.

New specially designed watt meter just for CB'ers! It will read up to 10 gazillion watts and has four power range settings.

The engineer setting - 100 watts in reads 100 watts on the meter.

The bragging CB'er setting - 100 watts in reads 400 watts on the meter.

The Elkin setting - 100 watts in reads a dead key of 75 and swings to 750 watts.

The DaveMade setting - 100 watts in reads 1500 watts and then your amplifier blows up.

:)

FLYING LOADS OF HORSECRAP you are a moron!

What some enterprising independent filmmaker out there needs to
do is pair-up the bush daughters with the olsen twins in a video or DVD.

In the first half of the video you have all four of em in
Wicked Weasel swimwear wrestling each oher in a
huge pen filled with cherry Jell-O or Oatmeal !

Lots of close up pics of the hair pulling, body-slamming
figure-four leglock action! Tape it in some midwestern
dive bar someplace with lots of NASCAR ballcap wearin
good-ole-boys in the stands cheerin em' on. (You could
even put some of the NASCAR car numbers on their
swimwear just to liven things up a bit..) In the second half
you have em all in a motel room someplace doin that
'lovely thang' that only girls know how to do best!
Girl on Girl action that's so hot and wild it should
peel the wallpaper from off the walls.....

Trust me, if such video were ever made, the proceeds from the
sale of the same would likely PAY OFF the entire cost of the
Iraq War and then nobody would want to fight anymore, but
would rather want to go back home to bang the crap out
of the ole-lady and/or the girlfriend/mistress/escort.

(..and we all lived happily ever after and got a
baby/EIC child tax break on the following
Year's taxes! How can U go wrong?)

> are quite useful.

Well, to be picky all they do is indicate the divergence from the Zo of the meter, in a certain way. If the TX is designed for that Zo then they do what you say, and they're quite useful.

> They won't even tell you what the load resistance actually is unless

That depends on the radio.

Without SWR protection one with a class C final, like the ones in the little QRP rigs I have lying around, will deliver more power if it sees a lower RF impedance at the final transistor than it was designed for. It will also overheat said final transistor* and possibly damage it. This will happen for some SWR mismatches but not all.

Again without SWR protection one with a class AB or B final, properly tuned for a 50 ohm resistive load, will deliver less power for some mismatches (the same mismatches that would be _higher_ power for the class C final). With other mismatches it would exhibit higher gain but more distortion. At some mismatch and level of drive you could probably expose the finals to too much power dissipation, too high an RF current or too high an RF voltage, and do damage. This depends _heavily_ on the design of the final stage.

With SWR protection, of course, the radio will automatically back off, perhaps even in a way that will do some good.

So I will use an SWR meter to keep the transmitter happy, and a field strength meter to make sure my antenna is doing it's job.

* assuming I got the heatsink design right, neither overly conservative nor overly optimistic.

Rightio.

This is my observation and opinion after doing a round-trip from San Francisco to Oklahoma City. The Eastern loop took me up through southern Utah then back down to I-40 at Gallup, NM. Coming back, it was I-40 all the way to Barstow then the "squiggle" over to I-5 North.

Observations and 2-cent bits:

--CB was useless and basically unlistenable off of the interstate. As soon as I got off, every town of any size seemed to have a few folks on big (illegal I'm guessing) super loud, echo base stations. Even when I had the volume down, they'd nearly blow the speakers out when they keyed up. They seemed to stick to channel 6 when I was on the interstate leaving 19 pretty free. But when I got off the I--all hell broke loose.

Kinda like this forum: For every on-target post that actually has something to do with CB, there are 10-20 rants, attacks, loud yelling, off-topic junk, etc.

--Truckers were pretty cool and courteous. I only heard a few using high powered radios with echo, annoying roger beeps, etc. Talk was usually short and if it started into a discussion, they were quick to jump to another channel (off 19). Right on.

So overall I'm kinda sad I couldn't use the radio off the interstates. The superloud folks were pretty idiotic too; talking in a strange, affected southern drawl voice, mouth so close to the mic it was muffled most of the time, and using lots of fakey laughter (to just hold on the modulation I guess).

Question: Is anyone using 2 meters or 70 cm on the highways? That might be a more sensible way to go in the future....

This is an illustration of a common problem. It's really improper *impedances* presented to the radio that disturb it; it doesn't know or care about the actual SWR on whatever transmission line may or may not be connected. Transmitters typically specify and show this load impedance as "SWR". But they can't tell the difference between a half wavelength 50 ohm line with 100 ohm load, which has a line SWR of 2:1; any length of 100 ohm line with a 100 ohm load, which has a line SWR of 1:1; a quarter wavelength of 300 ohm line with a 900 ohm load, which has a line SWR of 3:1; or a 100 ohm resistor. All these and an infinite number of other combinations will present 100 ohms to the rig, all will cause the rig's SWR meter to read 2:1, and all will have exactly the same effect.

You are gonna have problems on Ch6 (AKA Superbowl) all the time. The locals
here talk on 7, it is tough sometimes if the superbowl goes into overtime.
They usually bleed 2-3 channels up and down. It's a bummer but we deal with
it I guess. I spend most of my time on sideband. 38LSB to be exact. Here
you do have some superpowers but their conduct is MUCH more refined, as
always there are a few bad appled, that's to be expected. No echo, some are

running modified Ham rigs and the audio is pretty clear. Those who try echo get their wings clipped quick. If you have a sideband radio give it a shot, you may like it.

Only if you are exceeding the power dissapation of the devices.
Considering the way most CBers use radios and amplifiers, your
statement maybe more ture than false.

Generaly if the power disapation of the finals is not exceeded and
there is sufficient margin to handle the reflected power, it will just
dissapate as heat in the output circuits and the fianls. Then this is
only true if the reflection coefficient of the radio is zero. If other
than zero then there will be some of the antenna power reflected back
to the transmitter reflected back to the load. Then the rest is
dissapated as heat. Then you get all kinds of funny things happening
inside the coax. But that is another subject.

*****

Actually can happen if you push the finals to where there is
insufficeint margin to the maximum heat dissapation. Tubes are a bit
more forgiving. Transistor inadequately heatsinked and overdriven,
typical CB usage, often have little of no margin for heat dissapation.

If the transmitter has a refelction coefficient of zero and the load
say .3, then that reflected power from the load is dissapated as heat
in the output circuits and any final transistors or tubes. Now if the
radio has a reflection coefficient other than zero that will lessen
the heat dissapation on the transimiiter. Now you get load and source
reflections convoluting within the transmission line.

You ought to model a 400 Mhz square wave with source and load
refelctions coefficients other than zero. It can get ugly

No I don't know all the answers. Never claimed to.

Nor did I intend the post to be such or a smart ass post. If you took it that way I apologize for it was not intended to be that.

Just that current in a inner conductor and shield of the coax is induced by the TEM (Transverse ElectroMagnetic) wave that travels from the source to the load in the space between the two conductors. That is a hard concept for many to understand. But once that is understood then many of the mysteries of transmission lines becomes rather simple. All to often many think that the signal travels down the inside and outside conductors. It does not.

****

1) The impeadance of the coax never changes unless its dielectrtic, or
ratio of outer diameter to inner diamter changes.

2) the reflection coefficient of the load does not change unless there
is a physical change in the load.

3) currents on the shield from other sources will not change the
impedance of the load reflected towards the source.

4) currents on the shield may alter what the source sees as a load
impedance. It may well be possible that the source could see the
antenna and some other load in paralell and then vectorally add the
two impedances.

Well, let's put it this way: the radio and antenna don't connect to
the dielectric of a coax.

The point is that the error is insignificant when the directional
coupler is much shorter than the wavelength. The error is even more
insignificant when there are a host of variables and confounds between
the SWR meter and the transmitted field that can (and frequently do)
affect the objective -- field strength. It's much simpler (and just
plain logical) to measure the field strength directly instead of
measuring an abstract value halfway towards the objective and relying
on nothing more than speculation that the rest is working according as
expected.

And #4 is exactly why #1 is incorrect: the 'characteristic' impedance
of a coax is constant, but it's 'input' impedance varies according to
load mismatch at the other end. If it wasn't for this fact, a tuner at
the radio end would be useless. But the point here is that if the SWR
meter is left floating with the coax shield (both of which should be
RF grounded) then the measurement can be darn near anything.

It is the directional coupler that is balanced for a particular value of Z0.

Nope, that's not the point at all. It is true that a 50 ohm
SWR meter designed for HF may not work on 70 cm but the error
I'm talking about is the calibration error in a 50 ohm SWR meter
designed for HF and used on HF in, for instance, a Z0 = 450 ohm
environment instead of its calibrated-for 50 ohm environment. It
works perfectly in a 50 ohm environment at the HF frequency of
operation. Here's the proof using a 50 ohm SWR meter:

XMTR--1/2WL 450 ohm line--SWR meter--1/2WL 450 ohm line--50 ohm load

The 50 ohm SWR meter will read 1:1, nowhere near the actual SWR

XMTR--1/4WL 450 ohm line--SWR meter--1/4WL 450 ohm line--50 ohm load

The 50 ohm SWR meter will read 81:1, nowhere near the actual SWR

An SWR meter calibrated for 450 ohms will correctly read 9:1
in both cases.

Sometimes yes, sometimes no. If the reflected current arrives out
of phase with the forward current, then the final dissipation can
actually be *reduced* by the mismatch.

your reasoning does not pass the common sense rule.

if 18 feet is special because the velocity factor outside the shield
is nearly 1, then no other length has a velocity factor of nearly 1?
What would cause the outside velocity factor to change?

Beisdes I really don't care to rehash this topic to much more. Been
there, done that and don't care to review it right now.

Power is power. Phase is not a problem. Take the mafnitude of the
transmitted power and teh magnitude of the reflected power. The
results are phaseless. The magnitudes add linearly.

Frank Gilliland wrote, among other things, "The point is that the error is insignificant when the directional coupler is much shorter than the wavelength."

Certainly "directional couplers" for HF may be built at essentially zero length, and ideally would have exactly zero length, monitoring the current and voltage at a single point on a line. Then SWR or reflection coefficient magnitude or even complex reflection coefficient may be calculated under the assumption we know the desired reference impedance. But if the equipment combines the voltage and current samples in the wrong ratio, you will get the WRONG answer. Even if the coupler looks like a perfect 50 ohms impedance section of transmission line (with some attenuation), the error _in_measurement_output_ can be significant indeed. Just because the coupler looks like a 50 ohm line to the line it's hooked to doesn't mean it will read zero reflection when IT's presented with a 50 ohm load.

And by the way, not everyone who measures and cares very much about SWR (or reflection coefficient) cares a whit about field strength. Not all loads are antennas.

Indeed, as Reg says, we might do better in amateur applications to consider the SWR meter as an indicator of the degree to which we're presenting a transmitter with the desired load. That's really what we're using it for, most of the time. It may ALSO be interesting to know the field strength, but please be aware that a transmitter's distortion products may be significantly higher if it's presented the wrong load impedance, even though the power output may be increased. Field strength alone is not acceptable to me as a means to adjust an antenna load to a transmitter, or as a way to adjust the operating point of the transmitter.

Cheers,
Tom

Consider the MRF 140, a 150 Watt 2.0 - 150.0 Mhz N-Channel
linear RF power fet. From the technical data sheet: "100% Tested
For Load Mismatch At All Phase Angles With 30:1 VSWR." You'd have
a tough time damaging this device with a mere 2:1 VSWR.
How do load and source reflections convolute within the
transmission line? That's a new one on me. My old dictionary
defines 'convolute' as "Rolled or folded together with one part
over another; twisted; coiled." The rest of the post is pretty

fanciful, too. A trip to the library would do wonders.

first make sure you have a proper CB setup

-200 watt linear or bigger

-modified transceiver capable of doing ~26-29mhz

-good antenna

then someone will want to talk with you, otherwise go somewhere else

Cecil was talking about current, not power. You can't add
power the way you can voltage and current. If you could, you
could build a very nice perpetual motion machine just by using the
reflections in a transmission line to add power so that the output
was greater than the input.

you should be able to find plans/circuits/schematics for a ham vfo
able to cover the cb freqs, below and above

you can probably purchase one cheaply off ebay

any ten meter vfo should be easy to modify to cover cb freqs-remove a
turn or two off the osc coil or add a bit more capacitance across the
coil

The rig has no way of detecting any alleged "reflected power". It can't tell the difference between a feedline with a lot of "reflected power", a feedline with no "reflected power", and a plain resistor. It behaves exactly the same in all cases, provided only that the impedance that each provides to it is the same.

Anyone not convinced of this should put a couple or more dummy loads in series or parallel, make up a few lengths of transmission line of various impedances, and see for himself.

Roy Lewallen, W7EL

> Johnget in touch with me at thecowboyace@yahoo.com about the SBE Console II and Siltronix VFO's. I have some data that might help you make up your mind. The SBE is a definite 4 watt********* with 100% clear modulation on ithem. I have two of them. ONly have one set up with a VFO but I don't usually work the funny channels because there is enough on sideband 1-40 to take care of me. I know that the breaking of the law is there but I figure as long as I am not running a linear and relying on a danged good homemade antenna, coax the correct length, the feed to the antenna correct, SWR'rs down at almost 1:1.1 on all channels I can do bunches of stuff with a 2 element quad horizontal fed. ANTENNA, ANTENNA, ANTENNA, ANTENNA, ANTENNA, IS THE KEY TO THE OPERATION then modulation then watts out. A good ceramic mic will, when matched to the CB/ham transceiver will do as much as those D104's with the 9volt battery in them. Forget the echo, now the roger beep is ok on ssb because if a person has his mic keyed but not tlaking therewill not be a signal coming in. ONly when modulation does the S-meter on your radio work. Even the wattmeter in the CBer who is running SB will show nil when the key is keyed down. Voice activation is the deal. CAn't explain it correctly but this is pretty close to what it is all about. Get in touch with me though....

*****

What I will agree with is that the impedance seen at the input to the
coax is a reflection of the load impeadance as transformed, altered if
some don't like the word transformed, by the length of the coax. I
have no problem with that. Still this impedance is highly dependant on
the load and its reflection coefficient.

Correct the characteristic impedance of the coax never changes and
that was what I intended with #1.

There lies our misperceptions; I was not referring to using an HF SWR
meter designed for coax and plugging it into 450 ohm ladder line.

>the dielectric of a coax.
*****

No it does not directly.

I know this concept is not easy to see but at the begining of the coax, one can then consider the energy that travels down the coax as a TEM wave. It is inside the dielectric where the E and H fields of the traveling wave can be measured and found.

In transmission lines it is by far easier to think of E and H fields within the the transmission line. Once that concept is mastered then the rest is rather easy.

When the wave reaches the end, you have the final induced currents. You can take a dipole and look at it as if the legs were an extension of the transmission line. This can better be seen if you consider a dipole and it is fed with open twin lead. The leads of the dipole then are an extention of the twin lead except they are now at 90 degrees to the transmission line.

Current is high when the magnetic field is high. This is so because the induced current is controlled by the density of the magnetic field. The E field is high when magnetic field is low. The E field does not require current but voltage. On a center fed dipole the impedance is low and the corresponding currents are high. The E field off teh antenna is also low. As you progress a quarter wave from the feed point in either direction the H field increases and the E field decreases. With increasing H field the RF currents induced in the antenna are high. Thus Ohm's law hald true. Z = I^2*R. Where R is the radiation resistance of the antenna. The ends of a center fed dipole are high impedance.

Tom

The problem is that current is not reflected back from the load, power
is. Thus the you can add magnitudes of power.

Agreed that a rig cannot detect the difference between forward and
reflected power. If the reflection coeffiecient of the source is zero
then final stage of a transmiter will look purely resistive to any
power reflected by the load. Thereby that refelcted power is
dissapated as heat. Other reflection coefficients at the source will
yield lesser amounts of reflected power from the load as heat.

SWR is a ratio, not an absolute value. It doesn't matter if the meter
reads a forward power that's off by 1 or 1000 watts just as long as
the reflected power is in error by the same percent, which will be the
case unless you are using two different meters for forward and
reflected power. Calibrated or not, SWR is the same.

>And by the way, not everyone who measures and cares very much about SWR
>(or reflection coefficient) cares a whit about field strength. Not all
>loads are antennas.

That point might be relevant if this thread were cross-posted to
alt.heaters.induction or rec.dummy-loads.

>Indeed, as Reg says, we might do better in amateur applications to
>consider the SWR meter as an indicator of the degree to which we're

I agree 100%.

> That's really what
>we're using it for, most of the time.

Unfortunately, it's that "most of the time" part that starts threads
like this. Some radio operators mistakenly think SWR is a measure of
antenna efficiency.

> It may ALSO be interesting to
>know the field strength, but please be aware that a transmitter's

>point of the transmitter.

True story. It's certainly better to use a tunable FSM if one is
available. And such meters are readily available -- any receiver with
a good S-meter.

You need to read _Reflections II, Transmission Lines and Antennas_
by M. Walter Maxwell, W2DU. Even better, get a book on electromagnetics.
You might be able to puzzle some of it out although much of
the math might be too esoteric for you.

In electrical engineering it is the instantaneous power density of two signals passing at the same spot from two directions. That is called Convolution. It also is a nice mathematical means of modeling SWR at any point on a transmisison line at a particular time.

Well if you knew CBers, they are not satidied getting 150 watts from a transistor rated for 150 watts. But in my first paragraph I thought I made it clear but evidently I did not. I guess I must strive to better explain myslef.

I keep trying to stress that fact, but some people persist under the
delusion that they can learn everything they need from the internet.

Hi James,

No, it is called Superposition, and that is done only with voltage or current. What you are describing may be associated with the Fourier convolution of power series - an entirely different field (and not even additive).

Whats wrong with stating that power is reflected by the load? Isn't
power delivered to the load from the source? Elementary electronics
states that power is voltage time current.

Currents in a transmission line are induced currents. They are induced
from the E and H fields of the TEM wave. I hope that you don't think
that current races up and down the coax millions a times per second?

james
